Population Estimates

Eddie Hunsinger
Alaska Department of Labor
and Workforce Development
Population Estimates: What We Provide

• Annual state, borough, census area, city, census designated place, and census tract population estimates.

• State, borough and census area estimates by age, sex, race and ethnicity.

• Alaska is very fortunate to have data from the Permanent Fund Dividend to use in population estimates.
Migration Data: What We Provide

• PFD-based migration data for the state as well as all boroughs, census areas, cities and census designated places.

• New estimates are available each January.

• Currently, demographic characteristics are only available through special reports, but we’re looking at potential regular releases for the future.
Population Estimates: What We Provide

• New estimates of total population for all areas, and by age and sex for boroughs, census areas, and places of 1,000 people or more are available each January.

• Estimates by race and ethnicity are available in July.
Population Estimates: Uses

- The population estimates are used for a wide range of purposes, including:
  - Distribution of resources
  - Survey weighting
  - Research and planning
  - Updating of population projections
Population Estimates: How We Make Them (briefly)

- For area total populations and population by age and sex we begin with the last decennial census (2010 Census).
- Create ratios of census counts to PFD recipients in the census year, and carry them forward each year until the next census.
- Adjust to a separately estimated state total.
- There are additional procedures to account for military, prisons, dorms, etc.
Population Estimates: How We Make Them (briefly)

- Race and ethnicity are not included in the PFD data, so we combine our data with Census and NCHS numbers to get the best of everything.

2020 Census: Importance

- Redistricting (state and federal).
- Funding (“…information the census collects helps to determine how more than $400 billion dollars of federal funding each is spent on infrastructure and services…”).
- Countless statistics go back to the decennial census.
2020 Census: Items On Radar

- Re-engineered Address Canvassing.
- Residency rules/guidelines.
- Public Use Microdata Areas.
- Count Review.
- Geographic programs
  (Participant Statistical Areas Program, Tribal Statistical Areas Program, Local Update of Census Addresses, Voting District/Block Boundary Suggestion Project).
Thank you!

- Native Census Area
Migration Data and Information

Migration data for Alaska come from three main sources, each with its own strengths and weaknesses. This means that each source is an indicator of migration, but none provides a complete system to directly track it.

To view the official estimates of annual net migration for Alaska and its regions, boroughs, and census areas, go to our Population Estimates page and see “Components of Change.”

Alaska Economic Trends Articles About Migration

PPD-Based Migration Indicator Data

PPD-based migration data have broad state coverage but lag on new arrivals from outside the state, because they aren’t eligible for the PPD until they’ve lived in Alaska for one calendar year. Similarly, PPD data do not capture people who don’t live here long enough to qualify for a PPD. Maps of these data are available on our Maps & GIS page.

- PPD-Based Migration between Borough/Census Areas, 2000-2014 (Excel)
- PPD-Based Migration between Borough/Census Areas, 2006-2014 (Excel)
- PPD-Based Migration To and From Cities and Places, 2000-2014 (Excel)

IRS-Based Migration Indicator Data

IRS-source migration data provide direct counts of moves between U.S. counties, boroughs, and census areas by computing the addresses of returns — that is, in Alaska and their dependents — from year to year. However, they only cover about 15 percent of Alaska’s population, with particularly low coverage in low-income areas, and values below 15 are suppressed.

- IRS-Based Migration To and From Alaska to States, 2000-2014 (Excel)
- IRS-Based Migration between Borough/Census Areas, 2000-2014 (Excel)

ACS-based Migration (“Geographic Mobility”) Data

The U.S. Census Bureau’s American Community Survey (ACS) based migration data provide population characteristics such as age, sex, race, income, and education. However, ACS is based on a very small sample of the population and tends to have large margins of error. For most states in Alaska it’s only available on 5-year averages. ACS data are available on our ACS page. U.S. Census Bureau’s American Community Survey’s Geographic Mobility Migration page.
Census and Geographic Information

Population, Social, Economic, and Housing data are collected and tabulated by the US Census Bureau for the decennial census and American Community Survey. Population estimates for years between censuses are published by the Alaska Department of Labor and Workforce Development, Research and Analysis Section.

Census

2010 Census Demographic Profile
- Tables Population, Age, Race, and Housing Units
- 2010 Census Redistricting Data (P.L.94-171) Summary File
- Population and Housing Unit data (based on the 2010 Census boundaries)

1800-2000 Historical Census Data
- Population, social, economic, and housing data for Alaska and communities (geographic boundaries are as of the census year)
- Census Maps
- Census boundary maps and GIS data

American Community Survey

Selected detailed social, economic and housing data tables available from the American Community Survey (ACS) are an ongoing household survey replacing the traditional long form used in previous decennial censuses. All ACS data are survey estimates and are released annually.

ACS data should be used for information not included in the decennial census data or the Alaska Department of Labor and Workforce Development Population Estimates.

Population Projections:
What We Provide

- Total population for Alaska, Alaska Natives and boroughs and census areas
- Single year of age and sex for Alaska
- Five year age groups for Alaska Natives and boroughs and census areas
The Balancing Equation

The most basic method of calculating numerical population change over time is the “balancing equation,” shown below.

\[ P_1 + (B - D) + (I - E) = P_2 \]

Where \( P_2 \) is the population at the later date and \( P_1 \) is the population at the earlier date; \( B \) is births and \( D \) is deaths between the two dates; and \( I \) is immigration (or in-migration) and \( E \) is emigration (or out-migration) between the two dates.
