

Chapter 1

The State Population

Introduction

This chapter covers statewide population trends for Alaska. It contains information on the components of population change (births, deaths, and migration), as well as discussion of statewide age, sex, race and ethnicity, and household composition. Data provided for decennial census years have an April 1 reference date, and data for all others years have a July 1 reference date.

2016 Population and Density

Alaska had 739,828 residents on July 1, 2016, or 0.2 percent of the U.S. population. The 2016 resident population of the United States, excluding territories and military overseas, was 323,127,513.

Alaska was the third least populous state in 2016. The states with fewer people than Alaska were Wyoming with 585,501 and Vermont with 624,594. The District of Columbia also had fewer people than Alaska, at 681,170.

Alaska has 570,641 square miles of land, or 16 percent of

the U.S., and its water area is 94,743 square miles. Over 35 percent of total U.S. water area is in Alaska.

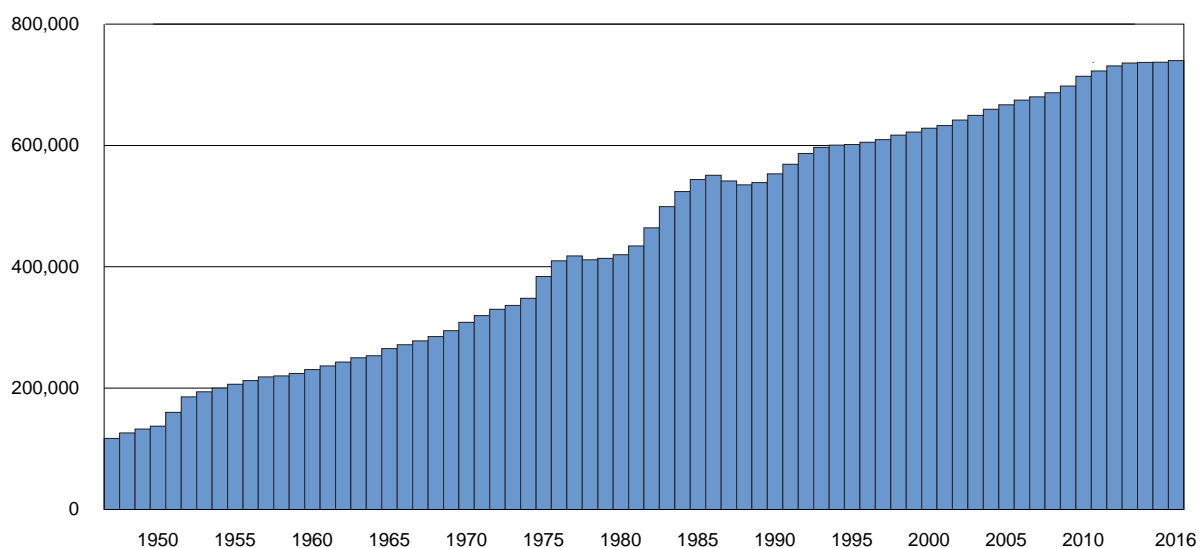

Alaska had 1.3 people per square mile in 2016, in contrast to 91 per square mile for the U.S. as a whole. Excluding Anchorage, which contains 40 percent of the state's population but only 0.3 percent of the land, Alaska averaged 0.8 people per square mile in 2016.

The majority of Alaskans live in towns and villages or clustered settlements. Most of the state's land area is owned by the federal government, the state government, or Alaska Native corporations. Excluding these areas, most of which place exclusions or restrictions on settlement, about 1 percent of the state's land is in other private ownership. Most of Alaska has settlements of moderate density surrounded by large tracts of uninhabited land.

Alaska Population History

The population of Alaska was quite small before the gold rush in the 1890s, although early territorial censuses were incomplete. The first census in 1880 counted 33,426 people.

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

By 1900, the gold rush had nearly doubled the state's population to 63,592.

After the turn of the century, the population of Alaska remained roughly the same for 40 years. By 1939, it was 59,278. The state's gold production had declined, and much of the state remained inaccessible.

World War II brought the construction of the ALCAN (Alaska-Canadian) Highway, which resulted in dramatic population growth. The war and ALCAN construction played a key role in the development of Anchorage and Fairbanks in particular.

Alaska's population grew rapidly from the end of World War II in 1945 through the Korean War years of 1950 through 1953. The state gained more than 25,000 people between 1951 and 1952 alone. After that, the population grew at a slower pace until the military buildups for the Vietnam War in the 1960s. At statehood in 1959, Alaska had approximately 224,000 people.

Construction of the 800-mile Trans-Alaska Oil Pipeline dramatically boosted population growth in the 1970s. The pipeline linked the giant North Slope oilfield of Prudhoe Bay with the oil terminal shipping facilities at Valdez. Pipeline construction began in 1973 and peaked between 1974 and 1975 with a migration gain of more than 30,000 people over that 12-month period. The boom from pipeline construction was followed by a large population loss after its completion. Between 1977 and 1978, the state had a net migration loss of

more than 13,000 people.

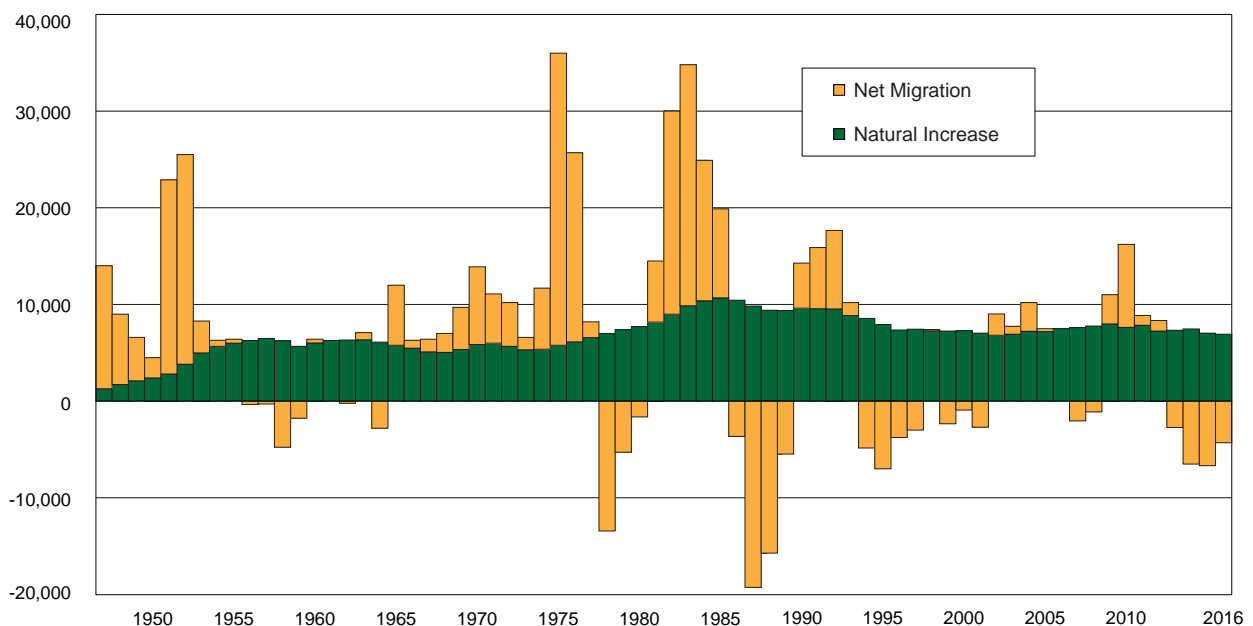

With new revenue from oil production, Alaska had a massive economic boom between 1980 and 1985. The population increased nearly 30 percent, making Alaska the fastest-growing state over that period. It grew most between 1982 and 1983, gaining nearly 25,000 people from net migration alone.

By 1986, falling oil prices triggered a recession. From 1986 to 1987, the state lost more than 19,000 people through net migration and had an overall population loss of 9,400. The cumulative net out-migration loss from 1986 to 1989 was about 40,000. The state had a high number of births during those years, but the population still dropped by more than 2 percent from its 1986 level. In 1989, net migration numbers became positive again.

Alaska's population increased more than 36 percent from 1970 to 1980 and nearly 32 percent from 1980 to 1990. For comparison, the U.S. as a whole grew by slightly more than 10 percent from 1970 to 1980 and another 10 percent from 1980 to 1990.

The 1990s began with three years of economic recovery and net migration gains that were followed by a period of net migration losses due in part to military base closures. Birth rates also declined in the 1990s due to the aging of "baby boomers" (people born between 1946 and 1964). The state's population increased by less than 14 percent for the decade, slightly more than that of the nation as a whole.

Figure 1.2
Components of Population Change for Alaska, 1947 to 2016

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Alaska then grew steadily from 2000 to 2010, and although high population turnover continued due to migration, the gains and losses were fairly balanced through 2009. From 2009 to 2010, the state's net migration gain topped 8,500 people, the most for a single year since the 1980s. This big gain was likely related to the late-2000s recession, which affected the nation far more severely than it did Alaska.

The state's population grew steadily from 2010 to 2013, but growth has been slow since 2013 due to net migration losses.

Components of Change

Population change is made up of natural increase (births minus deaths) and migration, as shown in Table 1.1. Natural increase is a fairly stable component of population change because birth and death trends tend not to change quickly. Migration is a much less stable component of population change in the state, often shifting dramatically from one year to the next.

Births and Deaths

Births and deaths are an important part of population change for Alaska, and are closely tied to the state's age structure, as well as age-specific fertility and mortality rates. Table 1.1 shows annual trends in the crude birth rate (number of births divided by the total population) and crude

death rate in Alaska.

Newborns have accounted for between 1 and 2 percent of the yearly population since the early 1990s, declining from prior years as the large population of baby boomers aged past child-bearing years. Alaska's overall number of annual births has been quite steady in recent years, remaining between 11,000 and 12,000 since the mid-2000s.

Alaska's crude death rate has increased steadily over time with aging of the state's population, from a low of 0.38 percent of the population in the mid-1980s to 0.58 percent in 2016. There are now more than 4,000 deaths each year in Alaska, up from around 2,000 per year back in the mid-1980s.

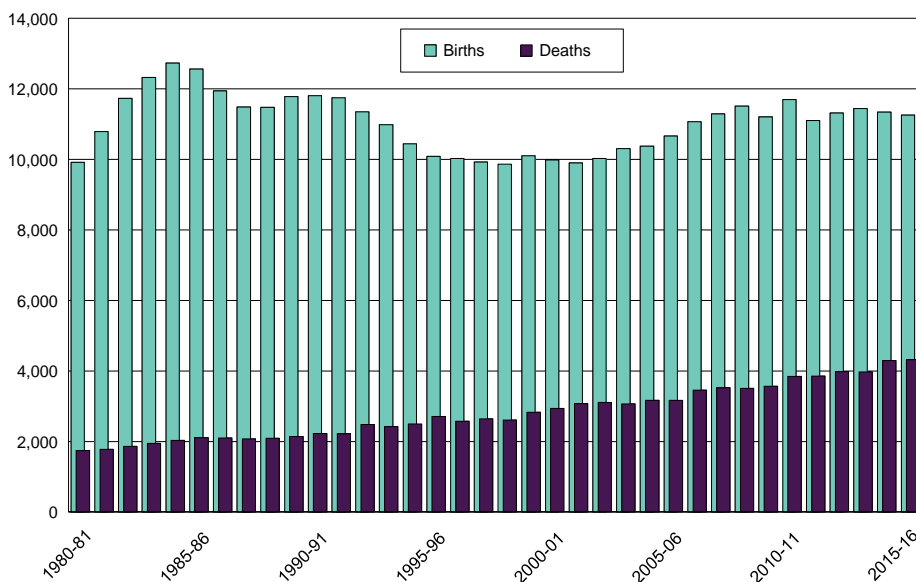

As Figure 1.3 shows, Alaska has also seen a substantial shift in the ratio of births to deaths over time. From 1980 to 1981, 5.7 Alaskans were born for every person who died during the same period. Ten years ago, from 2005 to 2006, the births-to-deaths ratio was 3.4, and from 2015 to 2016 the ratio was 2.6.

Birth rates may be more carefully analyzed with a measure called the "total fertility rate," which is the total number of children that would be born to a woman if she lived her entire life with that year's age-specific fertility rates, or the number of births per woman by age. A total fertility rate of around 2.1 is necessary for a population to replace itself through births alone. Based on data from the National Center for Health Statistics, the total fertility rate for the U.S. was between 1.7 and 2.0 from the early 1970s to the late 1980s. In 1990, the national total fertility rate reached 2.1 children per woman and remained between 1.8 and 2.1 through 2016.

Alaska's total fertility rate has consistently topped the national rate. Based on Alaska birth records and annual population estimates, Alaska's rate from the early 1970s through the late 1980s was between 2.0 and 2.5. In 1990, Alaska's total fertility rate reached more than 2.6, then fluctuated between 2.2 and 2.6 through 2010. It has decreased somewhat in recent years but remained above replacement level, at between 2.1 and 2.4.

Turning to deaths, "life expectancy at birth" for a given year is the number of years a person would live if that person lived an entire life with that year's age-specific mortality rates. According to the National Center for Health Statistics, the national life expectancy at birth increased steadily from 73.7 in 1980 to 78.7 in 2010. Based on Alaska death records and annual population estimates, Alaska's statewide life expectancy increased from 72.1 in 1980 to 78.1 in 2010.

Migration

As shown in Figure 1.2 and Table 1.2, net migration can vary widely from year to year. Tens of thousands of people move both to and from the state each year, and relatively small fluctuations in the number moving in or out can yield a large net gain or loss.

In recent years, fluctuations in net migration for Alaska have often been attributed to economic trends and events, but troop movements are significant as well. Much of the migration to and from Alaska depends on the stationing of military personnel, which is tied to historical events and planning at the federal level.

The majority of people living in Alaska are migrants to the state — statistics from the U.S. Census Bureau’s 2011-2015 American Community Survey (ACS) show 59 percent of Alaskans were born outside the state. Regionally, these proportions varied from a high of 79 percent in the Aleutians West Census Area (home to a large fish processing industry) to a low of 4 percent in the Kusilvak Census Area. Generally, 40 percent of Alaskans residing in places other than the state’s five most populous boroughs were born outside Alaska versus 64 percent in Anchorage and Kenai Peninsula Borough, 66 percent in Fairbanks North Star Borough, and roughly 60 percent in Matanuska-Susitna Borough and City and Borough of Juneau.

The 2011-2015 ACS also indicates 7 percent of Alaskans were foreign-born, while, at the time of the 2000 Census, 6 percent of Alaskans were foreign-born. For the U.S., 13 percent were foreign-born during the period 2011 through 2015, up from 11 percent in 2000.

At the state and national level, data to track annual migration are available from the Internal Revenue Service’s Tax Statistics, and these show that Alaska has among the highest rates of gross migration (in-migration plus out-migration) in the nation. Only the District of Columbia’s 18 percent gross migration rate was higher than Alaska’s 12 percent for 2013 to 2014 (the latest data available). The state with the next-highest rate was Wyoming at 11 percent.

The states that exchange the most people with Alaska typically have large populations or are close geographically. From 2013 to 2014, Washington sent and received the highest number of movers to and from Alaska, followed by California and Texas.

Race and Ethnicity Categories

Race and ethnicity categories used by the U.S. Census Bureau have changed over the decades, and this affects the comparability of data from different years. Major race groupings in 2010 Census data are white, black or African American, American Indian or Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. Individuals may write in their

race under “some other race,” and those responses are then assigned one of the major race categories. Tables noted “modified race data” in this publication include the adjustment for some other race, and those without that note do not have the adjustment. There is also an ethnic categorization, which is separate from race, where people can report Hispanic origin.

Figure 1.4
Proportion of Alaska Residents by Race
(Alone), 2016

Note: Because of rounding, the numbers do not sum to 100.

Because the American Indian population in Alaska is quite small relative to the Alaska Native population, the term “Alaska Native” is used in this publication to refer to “American Indian or Alaska Native.” “Native Hawaiian or Other Pacific Islander” is sometimes shortened to “Hawaiian or Pacific Islander” or just “Pacific Islander.”

The 2000 Census brought a fundamental change to race and ethnicity data collection by giving respondents the option to report more than one race. As a result, race data from the 2000 and 2010 censuses are far more complex and not directly comparable to race data from previous censuses.

Because data in the pre-2000 categories are still needed by some data users, “bridged-race” race estimates, which assign all individuals to a single race group, are provided by the Alaska Department of Labor and Workforce Development as well as the National Center for Health Statistics.

Historical Alaska Native Population

Few reliable data are available on the overall size of the Alaska Native population before the 1929 territorial census. In 1929, 29,983 Alaska Natives made up 51 percent of Alaska’s population. Although the Alaska Native population has grown rapidly since 1929, the non-Native population has grown more rapidly. (See Table 1.3.)

Current Race and Ethnic Composition

The Alaska Native and American Indian (alone) population in Alaska was 112,963 in 2016, or 15 percent of the state's total, a bigger proportion than any other state in the U.S. (For comparison, Hawaii's population is 10 percent Native Hawaiian or other Pacific Islander (alone), and New Mexico and South Dakota are each 9 percent American Indian (alone), according to the U.S. Census Bureau's 2011-2015 American Community Survey.)

Alaska's white (alone) population was 488,808, or 66 percent of the state. (See Figure 1.4 and Table 1.4.) Alaska had 50,824 Hispanic residents in 2016, which was 7 percent of the state total. People of Hispanic origin can be of any race.

Population by Age

The size of each age group is affected by aging along with births, deaths, and migration. Alaska's age structure as of 2016 is shown in Table 1.12 and Figures 1.5, 1.6, and 1.7. Other than aging, the largest factor affecting Alaska's age structure is migration, which is particularly high for 18-to-35-year-olds and their children younger than school age.

While Alaska's total population increased 4 percent between the 2010 Census and July 2016, children under the age of 5 decreased from 53,996 to 52,966. This age group currently makes up 7 percent of the state's population. From its high in 1993, the number of young children steadily declined to a low of 47,270 in 2001 but rose steadily over the next nine years. The number of children in this age group is volatile because migration has a large effect on it.

The population aged 5 to 13 are of elementary and middle school age. This group grew 5 percent from 2010 to 2016, from 91,587 to 95,972 and made up 13 percent of the state population in 2016.

The number of youths aged 14 to 17 has declined 3 percent since 2010, from 41,795 to 40,442 in 2016. Teens in this age group made up 5 percent of the state in 2016. In general, teenagers are less subject to changes in migration flows than younger age groups.

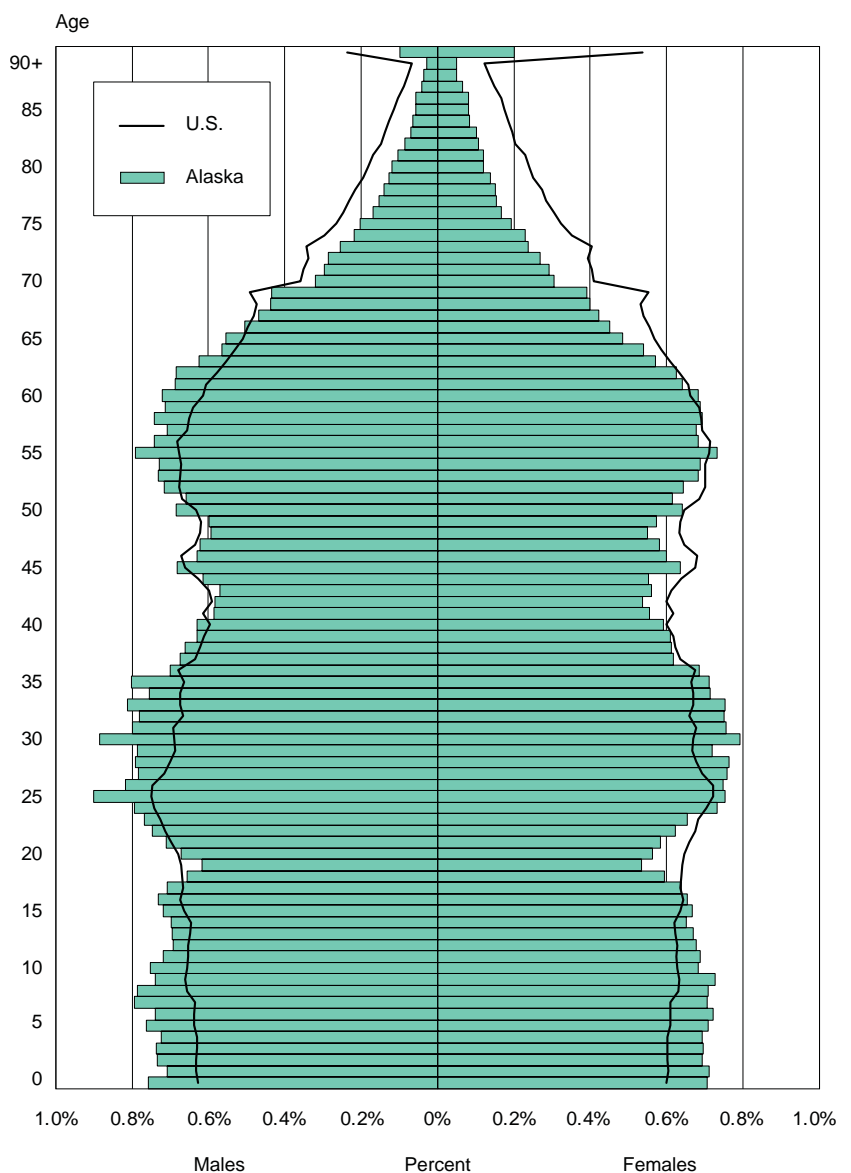

The 18-to-24 age group — which has very high rates of migration for school and work — has decreased 9 percent since 2010, from 74,881 to 68,406 in 2016. People in this age group made up 9 percent of the state's population that year. In general, migration yields a net loss of people

at ages 18 and 19, followed by a net gain for ages 20 to 24.

The population aged 25 to 34 is composed of young adults in prime ages for forming families and households. People in this age group contribute heavily to the number of children under age 5. In 2016, 16 percent (115,542) of Alaska residents were 25 to 34 years old. In 2010, 15 percent (103,125) of Alaska residents were in this age group. Alaska typically has strong net migration gains of people aged 25 to 34.

The size of Alaska's population aged 35 to 44 did not change much from 2010 to 2016. The group was 12 percent of the

Figure 1.5
Alaska and U.S. Population by Age and Sex, 2016
(Percent Distribution)

Sources: Alaska Department of Labor and Workforce Development, Research and Analysis Section; and U.S. Census Bureau

state in 2016 with 92,393 people, and 13 percent of the state in 2010 with 92,974 people.

The 45-to-54 age group still includes some baby boomers (people born between 1946 and 1964). This segment of the population decreased from 16 percent (111,026) of the state in 2010 to 13 percent in 2016 (95,150).

Despite typical net migration losses for people aged 55 to 64, this group has grown sharply since 2010 as baby boomers in the state aged. The state had 99,977 in this group in 2016 (14 percent of the state total), up from 85,909 in 2010 (12 percent).

Alaskans aged 65 and older numbered 78,980 in 2016, and the size of Alaska’s population aged 55 to 64 suggests the number of seniors will increase dramatically over the next decade. The 65-plus group increased from 8 percent of the state total in 2010 to 11 percent in 2016.

The growth rate from 2010 to 2016 for seniors in Alaska was

higher than any other state — but as of 2016, Alaska’s percentage of senior citizens remained among the smallest of any state. (In the U.S. as a whole, 15 percent were 65 or older in 2016.)

Median Age

Alaska’s population is younger than the national average but the gap is narrowing, largely due to the aging of Alaska’s large baby boomer population. (See Figure 1.5.) The U.S. median age in 2016 was 37.9, and the median age for Alaska was 34.7. Alaska had the fourth-youngest population in the U.S. after Utah (30.8), the District of Columbia (33.9), and Texas (34.5). In 2010, the U.S. median age was 37.2, and Alaska’s was 33.8.

By race, the median ages of Alaskans in 2016 were: 38.3 for white alone, 29.1 for Alaska Native alone, 30.9 for black alone, 35.7 for Asian alone, 26.7 for Hawaiian and Pacific Islander alone, and 18.9 for people of two or more races. The median

age for people of Hispanic origin was 25.8.

The Alaska Native population is generally younger because of higher birth rates and a smaller baby boomer population. The black, Hawaiian and Pacific Islander, and Hispanic populations are younger due to a combination of higher birth rates and the age and year of migration for the share that moved to Alaska. The very low median age for those who are of two or more races is the result of an increasing proportion of multiracial children and, perhaps, a greater tendency of younger multiracial Alaskans to identify as such.

Voting Age Population

As of July 1, 2016, the voting age population (those 18 and older) in Alaska totaled 550,448. Of that population, the white alone group was 383,925 (70 percent), Alaska Native alone was 76,367 (14 percent), Asian alone was 35,593 (6 percent), black alone was 20,310 (4 percent), Hawaiians or Pacific Islanders alone were 6,320 (1 percent), and people of two or more races totaled 27,933 (5 percent). An estimated 32,982 (6 percent) voting-age Alaskans were of Hispanic origin.

Dependency

Dependency ratios are ratios of the working-age population (ages 18 to 64) to the young and old largely nonworking populations. In 2016, for every 100 Alaskans aged 18 to 64, there were 40 Alaskans younger than 18 (unchanged from 2010) and 17 Alaskans 65 or older (up from 12 in 2010). For comparison, the U.S. had 37 children and 25 seniors for every 100 people of working age in 2016.

Male-to-Female Ratio

Alaska had 106.8 males for every 100 females in 2016 — much higher than the national ratio of 97 to 100, but down from 2010's ratio of 108.5 to 100.

By race, the male-to-female ratio was 110 for white alone, 102 for Alaska Native alone, 123 for black alone, 89 for Asian alone, and 99 for Hawaiian or Pacific Islander alone. The particularly high male-to-female ratio for black Alaskans reflects the large share of the state's black population in the military. The low male-to-female ratio for Asian Alaskans reflects a nationwide phenomenon (91 Asian males for every 100 Asian females). Alaska's male-to-female ratio for people of Hispanic origin was 107 in 2016.

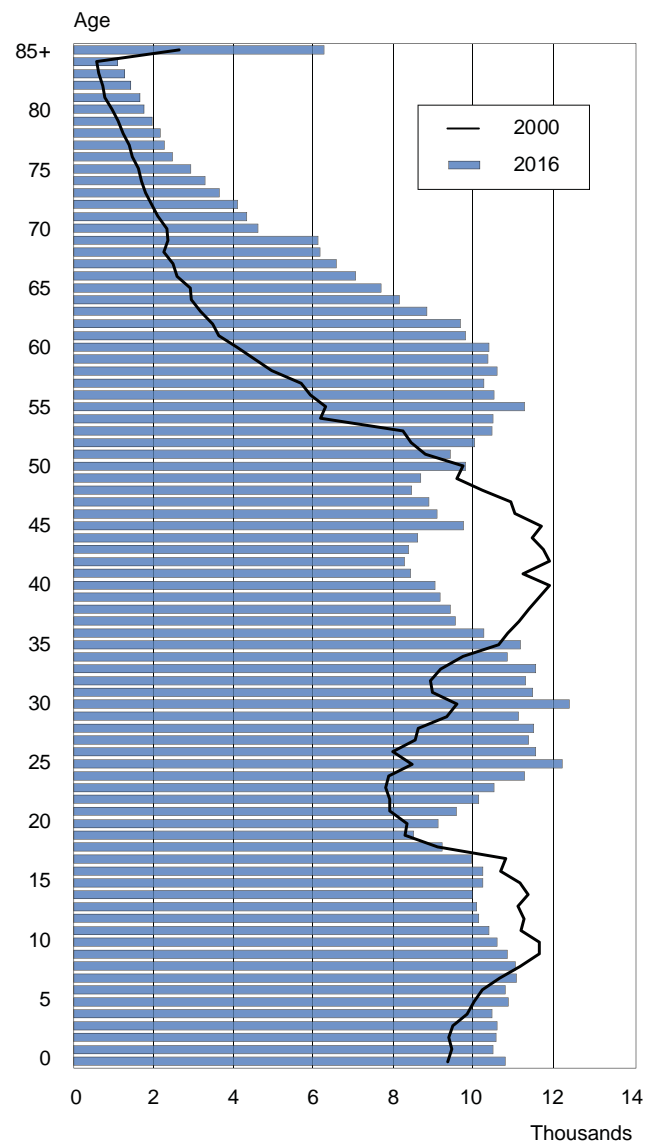

States with younger populations tend to have higher male-to-female ratios, in part because the ratio at birth is typically around 105 and also because life expectancy is generally lower for males, so the ratio decreases at higher ages. Employment can also affect male-to-female ratios for certain areas, such as the military, fishing, and mining in Alaska. Other states that had high ratios as of the Census Bureau's

2016 population estimates were North Dakota (105) and Wyoming (104).

While Alaska had very large male-to-female ratios at some points in its history (including the gold rush era and during large military buildups) and continues to have the highest ratio in the nation, the difference is sometimes exaggerated. Some communities in Alaska tend to be heavily male due to local industries, but most have ratios close to the U.S. average.

As shown in Figure 1.8, the highest ratio of males to females was for the 20-to-24-year-old group, at 117. Ages 65-69 were second with a ratio of 111. The relatively high male-to-female ratio at higher ages in Alaska is because more young

adult males moved to the state in the 1970s and 1980s than females.

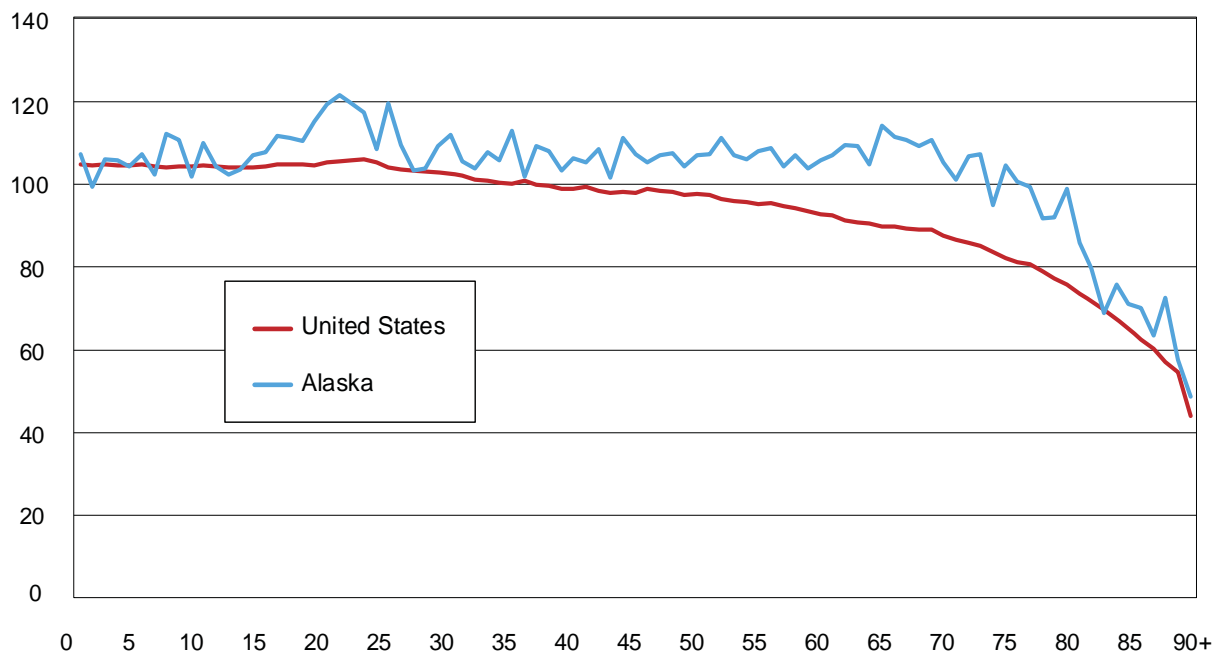

Alaska Households and Living Arrangements

The Census Bureau counts all people as living either in a household or a “group quarters” facility (a shared living facility such as a dormitory or prison). Any occupied housing unit is a household. The Census Bureau defines a housing unit as a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters.

The number of households in Alaska increased by 5,756, or 2 percent, from 2010 to 2016. The number of people per household increased slightly, from 2.65 to 2.70. Among Alaska households, 35 percent, or 93,466, had one or more people under 18 in 2016, and 57,088, or 22 percent, had one or more people 65 or older. (See Table 1.5.)

All people not living in households live in group quarters, which are in two categories: 1) institutionalized (such as prisons, nursing homes, psychiatric hospitals, and residential treatment facilities) and 2) others in group quarters (such as group homes, college dorms, military barracks, fish processing and logging camp bunkhouses, and emergency shelters). In 2010, 26,352 people (4 percent of the state) lived in group quarters. In 2016, 27,848 people (4 percent) lived in group quarters.
