Monthly Unemployment Rate
August 2006
Unemployment for Selected Areas

Alaska	5.5%
Anchorage	4.8%
Fairbanks	4.8%
Juneau	4.0%
Sitka	4.0%
Kenai Peninsula	5.9%
Mat-Su	6.2%
Aleutians East	6.3%
Yukon-Koyukuk	11.5%

Unemployment rate falls to 5.5 percent in August 2006
 Alaska's unemployment rate fell eight-tenths of a percentage point in August to 5.5 percent. The reasons for the larger than normal August decline aren't clear and may be due, at least in part, to volatility in the survey that produces the rate.

Alaska Economic Trends
Local Government..
Page 4
Alaska's largest employer
 In Alaska, more than 40,000 jobs are generated by local government, making it the state's single largest "industry employer." What they do affects almost all Alaskans in some way. They provide a whole spectrum of services, ranging from K-12 education, public safety, health care and social services to city planning, utilities and road maintenance.
Employment Scene.. Page 15
Job count unchanged in August
 Nonfarm wage and salary employment held steady in August at 337,000 and the state's unemployment rate fell eight-tenths of a percentage point to 5.5 percent. Over-the-year job growth has slowed slightly in recent months and stood at 1.2 percent in

The 2003-2004 Alaska Population Overview

Executive Summary

Executive Summary. The following is an Executive Summary including important observations taken from the 2003-2004 Population Overview.

Population Estimate. The July 1, 2004 population of Alaska was 655,435 (51% male and 49% female), and represented .22% of the national population.

Age. The median age of Alaska's population in 2004 was 33.2 years, somewhat less than the national median age of 36. Alaska, along with the nation as a whole, is aging, and as the large proportion of residents who were born during the "Baby Boom" years (the 1946-1964 period of high US fertility) reach retirement, the Alaska labor market and pension systems will certainly be impacted. Between the years 2000 and 2004, the population of Alaska age 65 and above increased as a share of the total population from 5.7% to 6.3%. Though the school age population (persons from ages 5 to 17) of Alaska saw little numerical change from the years 2000 to 2004, it decreased as a share of the overall population from 22.6% to 21.5%. [See Figure 1.6]

Race and Ethnicity. Alaska's racial and ethnic composition continues to be diverse. As of 2004 it consists of: 16% Alaska Native, 71% White, 4% Asian, 3% African American, .5% Hawaiian and Pacific Islander, and 5% Multi-Race. The Multi-Race category became a part of US Census estimations with the 2000 Census, and Alaska has the second largest statewide proportion of persons in this group, behind only Hawaii. Multi-Race persons in Alaska are predominantly a combination of Alaska Native and some other race. Ethnicity is a separate categorization from race, and in the United States is used to distinguish Hispanics from non-Hispanics. In 2004, persons of Hispanic ethnicity represented 4% of the overall state population. [See Tables 1.9 and 1.10]

Population Change. Alaska in 2004 saw steady increase in overall population (1.1%). Since the early 1990's, Alaska has seen relatively stable annual growth (between .2% and 1.7%), for which natural increase (the difference between births and deaths) has been an important component. Recent population growth in the state has been largely confined to certain areas, including the Mat-Su, Anchorage and Fairbanks Boroughs. Many areas of Southeast and rural Alaska have experienced a recent decline in population. [See Tables 1.1 and 2.1, Figure 1.2]

Migration. Migration represents the most unpredictable component of population change. In 2003-2004, Alaska experienced continued high gross migration rates, with 40,547 migrating in and 40,633 migrating out, for a net

migration loss of only 86 persons. Small shifts in Alaska's ability to provide labor and resources relative to other places can have major implications for its population size and composition. In 2004, approximately 45% of Alaska migrants had an origin or destination in the Western United States, and roughly 32% had an origin or destination in the Southern United States. [See Tables 1.2 and 1.3, Figure 1.4]

Births and Deaths. In 2003-2004, Alaska added 10,271 young persons to its population by births. Alaska had a fertility rate of 2.3 children per family, compared to 2.1 for the nation as a whole. Native American (including Alaska Native) families in Alaska had a fertility rate of 3.2 children per family, which is among the highest in the nation. White families in Alaska had a fertility rate of 2.2 in 2004. There were 3,030 deaths in Alaska in 2004, a relatively small number, in-line with our population's relatively young age. [See Table 1.1]

Urban and Rural. 75% of Alaska's population in 2004 lived in areas of 2,500 or more persons, only slightly lower than the national average. The major cities of Alaska, those with more than 10,000 persons, included Anchorage (277,498), Juneau (30,966) and Fairbanks (29,954). These three areas were home to 52% of Alaska's population. Though our state is massive in land-size (586,412 square miles), much of its area is owned by federal government, state government and Native corporations, and only a very small proportion (about 1%) is in other private ownership. [See Table 4.1]

Households. There were 234,714 households in 2004, an increase of 5.9% since 2000. Households in Alaska averaged approximately 2.7 persons in 2004. 67% of households in Alaska were family homes, 49% of households had married couples (a subset of families). 37% of Alaskan households had children in them, and 25% of Alaskan households consisted of persons living alone. [See Tables 1.20 and 2.2]

Group Quarters. The group quarters population of Alaska represents persons living in dwellings other than households. In 2004, 21,390 persons were living in group quarters in Alaska, representing 3.3% of the population. Of these, military represented 42.5%; fish processing, logging and similar employment 26.5%; correctional institutions 12.7%; college dorms and religious group quarters 6.3%; nursing homes 5.8%; homeless and other abused persons' shelters 2.2%; juvenile institutions 1.9%; rooming houses, group homes, etc. 1.6%; visible street locations 0.4%; hospitals, including certain handicapped facilities 0.4%. [See Table 2.2]

Preface

Alaska Population Overview

Alaska Population Overview provides a portrait of the ever-changing people of the state of Alaska. The goal is to provide a wide variety of frequently requested population information in a single publication. Populations presented here are for the resident population of Alaska. All July 1, 2000-04 population estimates represent an annual average population for each year rather than the population on July 1. Seasonal populations in parts of Alaska may be higher than the annual average permanent resident population. Readers should note that the entire time series for population is updated each year so that time series information should be taken from the most recent publication rather than annexing the most current year's estimate to that published previously.

This edition of *Alaska Population Overview* consists of four chapters which include current and historical estimates for the state, its boroughs and census areas and places, as well as information and data from the April 1, 2000, U.S. Census of Population and Housing. The population concepts and definitions used here are the same as those used by the United States Bureau of the Census at the time of the 2000 census. Terms and concepts are defined in a glossary found at the end of this publication.

Population Publications

Other publications supplement the *Alaska Population Overview*. Specialized demographic information is available in the Demographic Report Series. Copies of this publication and Demographic Reports will be posted on our Web site. Estimates currently are posted which modify the 2000 census to correct the age and race statistics from the 2000 census for a severe mis-tabulation of persons under 18 years of age and Office of Management and Budget consistent estimates of race. These eliminate the "Other Races" category. All age, race, male/female estimates used in *Alaska Population Overview* are consistent with Modified Age Race estimates.

Accuracy

While estimates in this publication are published in unrounded form for ease of use in other computations, the reader should NOT assume that estimates are accurate to the last digit. In general, the state estimate is assumed to be accurate to the nearest thousand and borough and census area estimates to the nearest hundred.

Acknowledgments

Thanks go to Nels Tomlinson, Economist, and Amber Meyer, Research Analyst, with the Demographics Unit during the preparation of this publication. Special acknowledgment is given to the Vital Statistics sections of the Division of Public Health and the Division of Family and Youth Services of the Department of Health and Social Services; and to the Alaska Department of Revenue, and Commerce and Economic Development for their aid in regularly providing information essential to the production of these estimates. Special thanks also goes to the Department of Health and Social Services and the Department of Transportation for the financial support in the production of these estimates. Special thanks also go to the personnel departments of the Army, Air Force, and Coast Guard in Alaska for the statistics they provide each year to the Alaska Department of Labor.

Comments or suggestions regarding the content or format of this publication are welcome. Many of the most requested statistics found here may also be found on the Research and Analysis Web site at: <http://almis.labor.state.ak.us/> Select Population Estimates & Projections from the choices at the left. Requests for demographic estimates and projections information may also be addressed to Greg Williams, Research and Analysis Section, Alaska Department of Labor, P.O. Box 115501, Juneau, Alaska, 99811-5501. Telephone: (907) 465-6029; FAX: (907) 465-4506; email: Greg_Williams@labor.state.ak.us.

Introduction

Demographic Programs

The Demographics Unit of the Alaska Department of Labor and Workforce Development, Research and Analysis Section, is Alaska's representative to the Federal/State Cooperative Program for Population Estimates (FSCPE) and the Federal/State Cooperative for Population Projections (FSCPP) programs with the U.S. Bureau of the Census. A wide range of state administrative records data are compiled and maintained by FSCPE agencies. They also prepare and review various estimates at the state, county and sub-county geographic levels. The FSCPE program is the only federally accepted source of population estimates between the censuses that are conducted every 10 years. The Research and Analysis Section also contains a third, separate federal/state cooperative program, the State Data Center program, housed in the Census and Geographic Information Network (CGIN) Unit whose function is the dissemination of U.S. census statistics, geography and other information from the U.S. Bureau of the Census.

The Research and Analysis Section (R&A) circulated 1,500 copies of *Alaska Population Overview: 2001-2002 Estimates and Census 2000*, and its web site saw increased usage. Requests came from federal, state and local government organizations, business and industry, nonprofit organizations, and individual citizens. The ongoing FSCPE program, along with the State Data Center program, also played a critical role in the 2000 decennial census. R&A reviewed census plans to insure that they are appropriate for Alaska and reviewed preliminary census results for error. A good decennial census helps to insure that Alaska's share of federal funding is maintained through the decade and that estimates are generated from an accurate population base. The FSCPE program also works to identify and correct errors that may have occurred in the 2000 census. These corrections are then incorporated into a new "estimates base" which is used as the starting point for computing estimates for the decade. This publication includes all of the census corrections known to date.

Demographics for Equal Allocation

Demographic statistics play an essential role in making decisions about the best way to spend scarce resources in government, business, and private nonprofit organizations. Government's use of demographic statistics helps insure democratic distribution of resources to the public at large or a segment of the public that is the focus of a specific program. Private nonprofits use demographic statistics

to identify the special interest clients to be served. In business, demographics function to direct resources in order to increase profits.

It is significant that for the framers of the U.S. Constitution equal representation was a keystone of democracy. Fair and equal access of every American to resources and services is an underlying principle of American government. Because federal, state and local funds are limited, the possibility of one group or community getting a disproportionate share of resources designated for all undercuts the principles of democracy. For this reason, up-to-date population estimates are essential for the allocation of funds and services at every level of government. Demographic statistics are frequently used to insure equal access to jobs, housing, education, wages and representation. Some examples include Equal Employment Opportunity/Affirmative Action laws, voting rights act compliance, and jury selection. Equal access to funding occurs through per capita distribution. Many government program funds are distributed solely on a per capita basis. Services such as liquor licenses are also regulated on a per capita basis. Some governmental and private nonprofit programs, however, are directed at a particular sub-group of the population who meet an eligibility requirement. For example, programs may also be targeted by geography, such as those for residents of low-income neighborhoods. The more specific the targeting, the more detailed the population and geography needed to insure that funds serve those for whom they were intended.

The business of targeting uses population statistics for market segmentation. To be eligible for targeted funds or services may mean having a specific characteristic such as being of school age, elderly, poor or handicapped. Another type of minimal eligibility applies to licenses and regulations for communities of a given size. For example, Alaska plumbing and electrical codes do not apply to very small communities. Funding for mass transit programs may only be available for larger communities. Banks and businesses typically evaluate community size to determine if there is sufficient market for a business, service or level of bonding.

Another aspect of targeting is geographic. Business and government use demographic statistics to locate facilities. Manufacturing plants, banks, landfills, stores and the location of offices for business, government and private nonprofit service areas all depend on the location of some population relative to the facility. Assessing demand placed

upon natural resources and wildlife often depends on the geographic distribution of both population and resources. One example is bowhead whale allocations to Alaska's northern coastal villages.

Demographics for Decisions

There are two key uses of demographics for decision making. The first is determining populations at risk for purposes of rate computation (i.e., birth rates, death and disease rates, teen pregnancy rates, crime rates). Such rates quantify the existence of a problem and its severity. Rates are necessary to compare the number of persons at risk in Alaska to the number at risk elsewhere. The second is the extensive use now made of sample surveys. Such surveys are valid only when the characteristics of the survey universes are known. This requires a variety of demographic statistics for the area being surveyed.

Making good decisions in any activity requires knowledge of the character and history of that activity. This is what education and experience provide. Statistics that describe characteristics, geographic distribution and trends are an essential part of the education needed for good decision-making. The analysis of trends and projections also is aimed at assessing the impact of different possible courses of action. News and public media organizations also demand this information as part of their ongoing efforts to keep the public informed of the changes that affect the decisions they must make as citizens.

There are certain fields where demographic information strongly affects decision-making in government, private nonprofit organizations and businesses. These include: health and health care; community, social and human services; education; land use and real estate; environmental impact; economics, banking and financial services; manufacturing, wholesale and retail marketing; transportation and shipping; and travel and leisure services.

Estimates and Federal Fund Allocation

As stated above, one particular use of demographic estimates is fund distribution. In FY03, \$9.3 billion in federal money came to Alaska in the form of salaries, retirement benefits, loans, direct payments to individuals and federal general government programs. Of the 589 federal program codes that provided money to Alaska, some 478 general government programs and one direct payment program accounted for \$3.03 billion. About

\$1.04 billion, or 34.3%, of all general government federal dollars coming to Alaska have formulas that depend either directly or indirectly on population. These are driven by the estimates generated by the Federal State Cooperative for Population Estimates.

A few large programs accounted for the vast majority of all population formula dollars returned to Alaska in FY03. In millions of dollars, these were: Medicaid (\$565.0); Airport Improvement-State Apportionments (\$184.6); Head Start (\$31.2); Water and Waste Disposal Systems (\$31.1); Urban Mass Transportation Technical Studies (\$26.7); Unemployment Insurance (\$22.4); Educationally Deprived Children-Local Education Agencies (\$20.8); Special Supplemental Food Program for Women, Infants and Children (WIC)(\$19.5); Special Economic Development and Adjustment (\$12.3); Foster Care-Title IV (\$10.2); Wildlife Restoration (\$8.8); Rehabilitation Services-Basic Support (\$8.2); Employment Service (\$8.2); and Child Support Enforcement (\$8.1). These 14 programs accounted for 92.2% of the federal formula dollars that were population dependent.

The next largest programs were, in millions of dollars: Adoption Assistance (\$6.3); Payments to States for Day Care Assistance (\$5.2), Rural Rental Assistance Payments (\$5.2), Block Grants for Prevention and Treatment of Substance Abuse (\$4.6), Vocational Education-Basic Grants to States (\$4.2), Coastal Zone Management (\$4.1), Social Service Block Grants (\$3.8), Special Programs for the Aging, Title III (\$3.6), Home Investment in Affordable Housing (\$3.5), Cooperative Extension Service (\$3.4), Community Development Block Grants-State Funding (\$2.7), Community Development Block Grants-Entitlements (\$2.4), Family Violence Prevention and Service (\$2.3), Drug Free Schools and Communities (\$2.3), Special Programs for the Aging-Title III (\$2.3), and State and Local Narcotics Control Assistance (\$2.2). In total, programs of more than \$2.0 million account for 97.8% of all population-dependent federal dollars coming to Alaska.

By federal department, population-dependent program money, in millions of dollars, coming to Alaska was as follows: Department of Health and Human Services (\$649.6), Department of Transportation (\$213.5), Department of Agriculture (\$56.1), Department of Education (\$37.4), Department of Labor (\$32.3), Department of Commerce (\$18.1), Department of Interior

(\$8.9), Department of Housing and Urban Development (\$8.6), Department of Justice (\$4.1), Environmental Protection Agency (\$3.1), Arts and Humanities (\$0.6), and Department of Energy (\$0.4).

Estimates, Regulation and State Fund Allocation

Federal funding formulas are only one aspect of the impact of population on the distribution of federal dollars to the states. Population estimates are used by the Internal Revenue Service to provide credit ceilings for state bonds and by the Federal Election Commission to determine spending limits for presidential and congressional election campaigns. Program managers at the state level also use population statistics throughout the process of further distribution of federal dollars to local communities. These programs use ongoing state estimates for counties and localities, as well as complex social and economic demographic characteristics.

Demographic statistics are also used to distribute state funds to local communities from state revenues. Population estimates play a key role in Alaska in distributing state funds to boroughs and municipalities. Population estimates play a major role in the allocation of quota share money for 2004 from the Bering Sea Fishery through the Community Development Quota (CDQ) program to coastal villages. The CDQ program equity for 2004 was \$309.5 million. In addition, the Department of Commerce and Economic Development will distribute some \$32.9 million through Municipal Assistance (Power Cost Equalization, Payments in Lieu of Taxes, Shared Fisheries Business Tax and the Small Municipality Energy Assistance Program) based upon population estimates and local censuses.

Alaska Statute and Regulation

At least 98 sections of the Alaska Statutes and 126 sections of the State Administrative Regulations reference population estimates or projections. Some of these cover areas such as: issuance and transfer of alcoholic beverage licenses, bank and savings and loan incorporation, state business licensing, Regional Education Attendance Area (REAA) school board sections, elections, Alaska Housing Finance Corporation operations, allocation of funds for highway construction, provision for public health municipal government incorporation, municipal powers and duties, municipal planning and land use, municipal tax resource equalization and limitation, distribution of moneys from school and mental health lands, State Budget Reserve Fund appropriation limit, school capital improvements and construction bonding, library operation, capital projects matching grants, capital budget submittal, planning for public works and municipal oil and gas production property tax limitations. Detailed population estimates are also critical to planning for emergency management and Homeland Security, in case of disaster or attack. Population information is also required for employment preferences in public contracting and implementation of water, air and environmental conservation regulations. While not required by regulation, current population is also used to allocate state police resources and local fire resources.

Chapter 1

Alaska State Population

Introduction

This chapter discusses population trends for Alaska. It contains a section on the components of population change, which include births, deaths, and migration flows. There are discussions of the age, male/female and race composition as well.

The Census Base For Estimates

Estimates produced here follow the Census Bureau's definition of residency. The U.S. Bureau of the Census defines a resident as a person who resides in a place for at least six months of the year or has no other usual place of residence. The reason for defining residents in this way is to avoid double counting. Foreign nationals who were resident aliens were counted in the U.S. communities in which they lived, as were college students and military personnel. Workers at remote sites, such as the North Slope and fish processing or lumber camps, are allowed to list their place of residence as someplace other than the work site. In 1980, 1990 and 2000, for example, most North Slope oil workers listed their place of residence as elsewhere in Alaska or out of state.

Estimates shown for July 1 actually represent annual average resident population rather than the population on that date. Employment in Alaska is highly seasonal in construction, fishing and seafood processing, logging, mining and tourism. At any point in time there are substantial numbers of nonresidents working in Alaska, primarily in seasonal jobs. During 2004, the most recent year for which information is available, about 70,367 or 18.4% of all persons who worked at some time during that year in nonfederal covered wage and salary employment, were nonresidents. This number, however, overstates the number of nonresidents in the state at any given point in time because these workers are present for varying periods of time. While exact estimates of nonresidents at any point in time during the year are not possible, the seasonal summer, non-tourist, nonresident population was probably equivalent to about ten percent of the resident population. Seafood processing, in particular, has a very high percentage of nonresident workers, averaging nearly 70% nonresident for the state as a whole. In some small coastal communities, these seafood workers can outnumber the permanent residents during the fish processing season. In other communities, nonresident or seasonal workers in industries such as tourism may outnumber the permanent residents. The greater this seasonal population, the more difficult it is to accurately estimate the permanent population. Sometimes communities will attempt to count transient work-

ers as residents. Since communities provide services to transient populations, they often feel justified in claiming them as residents for revenue sharing purposes. Such populations do not, however, meet Census Bureau definitions for residency.

As in previous editions of *Alaska Population Overview*, this edition continues to include some frequently used 2000 census information. The 2000 census counted some persons as Alaska residents in fish processing and other transient activity who had no other place of residence. United States ships in U.S. waters were also assigned to their port of origin or destination as of April 1, 2000. Ships' crews were considered as group quarters population. Persons living on board small craft were counted the same as persons living in houses or apartments. Crews of small fishing vessels were counted at their shore-based homes. Coast Guard ships were counted as group quarters in their home port.

Vessels attributed to Alaska ports accounted for 1,073 persons in the 2000 census in Alaska, or 0.2% of the state's population. This is about half of the number attributed to Alaska in 1990. In 2000, these ships contributed a significant portion of population to two of the state's boroughs and census areas. In the Aleutians West Census Area, for example, crews from these ships accounted for 12.5% of the population and in Aleutians East Borough, 5.2% of the population. In communities, these vessels had an even larger impact. Their crews comprised significant proportions of the population in Unalaska, 19.8%, and Akutan, 15.9%. In these communities, the ships represented a very transient population that varies seasonally or from year to year.

Population Trends

The provisional July 1, 2004, Alaska resident population was estimated to be 655,435, or 0.22% of the population of the U.S. The 2004 resident population of the United States, excluding territories and military overseas, was 293,655,404. The U.S. is comprised of 50 states, plus the District of Columbia. Alaska in 2004 still ranked 47th in population, unchanged from 2002. Wyoming, with a population of 506,529; the District of Columbia, with a population of 553,523; Vermont, with a population of 621,394; and North Dakota with a population of 634,366 have fewer people. The land area of Alaska covers 571,951 square miles; water area is 91,316 square miles. Alaska has about 16.1% of the land area of the U.S. and over 35% of the water area. In spite of its low population density of 1.1 persons per square mile, Alaska population in 2000 was

65.6% urban. The U.S. percent urban in 2000 was 79.0%. The census definition of “urban” changed in 2000, from places of 2,500 or more to a density measure. By the old 1990 definition, Alaska was 73.9% urban in 2000 and 75.1% urban in 2004. In 2004, the U.S. averaged 83.0 persons per square mile. Excluding Anchorage, which contains 42.3% of the state’s population but only 0.3% of the land area, Alaska averaged 0.66 persons per square mile. Most Alaskans live in towns and villages or clustered settlements. As discussed in Chapter 4, most of the state’s land area is in federal and state parks, forests, wetlands, wildlife and wilderness preserves, Alaska Native Corporation lands, and 5,000 glaciers. Excluding these areas, most of which place exclusions or restrictions on settlement, only about one percent of the state’s land is in other private ownership. In all, these private holdings amount to an area about 27% less than the state of Massachusetts or the state of New Jersey, and a fair amount of this land is inaccessible or unusable for settlement. Consequently, most of Alaska shows settlements of moderate density surrounded by large tracts of uninhabited land.

Alaska Population History

The population of Alaska was quite small before the gold rush in the 1880s. Early territorial censuses were incomplete. The first census in 1880 counted only 33,426 persons. The gold rush doubled the state’s population between 1890 and 1900. Following the turn of the century the population of Alaska remained stable for the next 40 years. The 1900 population was reported at 63,592, but by 1939 the population remained at only 59,278. The state’s gold

production had declined, and much of the state at that time remained inaccessible. World War II brought the construction of the Alcan Highway. The result was dramatic growth of the state’s population as shown in Table 1.1 and Figure 1.1. The war and Alcan construction played a key role in the development of both Anchorage and Fairbanks. Although the military share of the state’s population has declined since World War II, it continues to play a substantial role. In 1990, about 10 percent of the population was made up of military and dependents; by 2004, they accounted for only 7.1%. Alaska’s population grew rapidly from the end of World War II to 1952. The average annual rate of increase was 9.5% per year. The population grew at a slower, smoother pace from 1952 to 1965, with an average annual rate of change of 2.7% per year. Alaska had approximately 224,000 people at the time of statehood in 1959. From 1965 to 1973, population growth rate gradually increased to 3.0% per year.

The building of the 800-mile trans-Alaska oil pipeline dramatically affected population growth in the 1970s. The pipeline linked the giant North Slope oilfield of Prudhoe Bay with the oil terminal shipping facilities at Valdez. Construction began in 1973 and peaked in 1975, with a migration gain of over 30,000 persons. The average annual rate of population change during this period leaped to 6.6% per year. At the completion of pipeline construction, the boom was followed by a recession during the 1977-80 period. The result was a population loss of about 6,400 people between 1977 and 1978. The net loss of people due to out-migration in that year was more than 13,400. The annual rate of change over the four-year period, however, averaged a positive 0.6% per year.

Figure 1.1
Alaska Population Trends, 1946-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Between mid-1980 and mid-1985, Alaska experienced its largest economic boom. Rapid growth resulted from construction and infrastructure development fueled by a combination of state spending based on oil revenues, major federal expenditures, and private development. As a result, Alaska’s population grew by a phenomenal 25% in five years, making it the most rapidly growing state in the nation. The most growth occurred in the 1981-83 period during which the annual rate of change averaged 6.8% per year. The pace of growth began to slow during 1983-84, with a rate of change of 4.8%, and declined further in 1984-85 to 3.6%.

From 1985-89, Alaska experienced a recession similar to that of 1977-80, but more severe, as a result of falling oil prices combined with declining crude oil production. During the period of the retrenchment in 1986-87, population declined at the rate of 1.8%. The cumulative loss of persons to net

out-migration in the period 1985-89 was about 45,900 persons, as compared to a net out-migration of 20,400 during the post-pipeline period. This population loss was equal to about 8.3% of the state's peak 1986 population. This loss would be proportionally equivalent to the loss of Spokane to the state of Washington or the loss of the San Diego metropolitan statistical area to California. By 1989, net out-migration slowed enough to allow the natural increase of births over deaths to produce the first increase in population since 1986. In the final analysis, the average annual rate of population increase for Alaska during the period from July 1, 1980, to July 1, 1990, was 2.8%, whereas for the United States during that period change averaged just 0.9% per year.

Between 1990-2000, the state's population continued to increase. Population growth averaged 1.3% annually, ranging from a low increase of 0.2% between 1994-95 to a high of 3.0% between 1991-92. Since 1993, it has been natural population increase, or more births than deaths, that has provided the major stimulus for growth. Alaska still has one of the highest rates of natural increase in the nation, but as in the nation as a whole, birth rates are currently falling. Because of the substantial declines in military and dependent population due to base closures and reorganizations during the mid 1990s, Alaska experienced a protracted period of net out-migration. The military movements were large enough to offset any civilian immigration during this period. During the late 1990s, the extremely good economic opportunities in the states which have traditionally provided most of Alaska's migrants, combined with Alaska's lack of growth in income and the continued high cost of living, dampened in-migration to the state relative to levels seen in the early 1980s and 1990s. With the national economic downturn of 1999, most movement nationwide declined. With the decline in opportunities in Alaska's feeder states, in-migration became positive for the first time in 2001-2002 accounting for a modest growth equaling about half of our natural increase in that year. Since the 2001-2002 period, net migration has fallen, and is roughly zero for the 2003-2004 period.

Factors Which Influence Change

The overall prosperity of Alaska in terms of revenues, as in the past, remains heavily dependent upon demand for its natural resources both at home and abroad. Government spending and policy decisions also have a substantial effect on the economy and population growth in Alaska. Government remains Alaska's largest primary employer. In 2004, close to a third of Alaska's total labor force was directly employed by the military, federal, state, and local governments. Reductions in federal agency spending, state operating revenues, and loss of revenue sharing to local communities are all part of a trend that has slowed Alaska's economy and overall population growth in the past. The largest positive growth sector in employment since 1990 has been in the service sector.

Major expenditures on privately funded, federal- and state-sponsored construction, while beneficial to the state's economy in the short term, generally have caused only a temporary surge in population. Rapid expansion has historically been followed by economic downturn.

Alaska's population has increased six-fold since 1946. Despite fluctuations in population growth in Alaska, the overall trend during the post-World War II period has been one of positive growth. While Alaska is currently attempting to achieve a more stable and balanced type of economic growth, its economy is still largely dependent on natural resources, especially oil and gas.

The physical resources of this state will continue to be unique. Demand to extract Alaska minerals such as oil, gas, gold, and coal should remain strong. Fishing and forestry will continue to play a modest and probably declining role in Alaska's future. Tourism continues strong and brings demands for increased access to the scenic beauty of the state. Beyond the economic considerations, the intangible quality of Alaska as a place of wilderness, beauty, and special way of life will continue to attract some migrants to the last frontier.

Components of Change

Population change is made up of natural increase (births minus deaths) and migration as shown in Table 1.1 and Figure 1.2. Natural increase is the fairly stable component of population change. Death rates change very slowly, and while current fertility depends on a variety of factors, the general birth trend does not change direction quickly. Migration is the unstable component of population change in the state, often changing dramatically from one year to the next.

Births and Deaths

Nationwide fertility rates declined from the 1970s to mid-1980s. In the latter 1980s this trend reversed. From a nationwide low in 1987 of 1.8 children per family, fertility increased to a 1990 high of 2.1 children per family. This increase was primarily the result of increased fertility for older baby boom women who had postponed marriage and childbearing. Alaska's fertility rate has always been well above the national average. In 1990, Alaska had one of the higher levels of fertility among the states, with 2.6 children per family. Decade trends in crude birth rates for Alaska, its boroughs and census areas can be seen in Table 2.3. Following a brief increase in birth rates around 1990, birth rates have declined somewhat in Alaska and nationwide. In 2004, Alaska's fertility is about 2.3 children per family, up slightly from 2.2 in 2002.

Between July 1, 2003 and July 1, 2004 an estimated 10,271 persons were born in Alaska and an estimated 3,030 persons died, a net natural increase of 7,241 persons. This translated into a growth rate of 1.1% as a result of natural increase. Births were equivalent to about 1.6% of the population. Approximately 0.5% of the population in Alaska died.

Most of the growth in Native American population was due to natural increase. Birth rates among Native Americans have traditionally been very high. In 2003-2004, the crude birth rate for Native Americans was 25.0 per 1,000, reversing the recent, declining trend. The crude death rate was 7.2 per 1,000 for a natural increase of 1.8% per year. In 1970, the average number of children for Native American families was 4.6. The number declined to a low of 2.7 in 1976, but has slowly risen after that year. The average number of children in 1990 had returned to a peak of about 3.9 children per family. In 2004, the average Native American household in Alaska had declined to 3.2 children per family.

In contrast, the size of White families in Alaska generally has been relatively stable since the mid-1970s. The crude birth rate for Whites in 2003-2004 was 15.8 per thousand, and the crude death rate was 4.6 per thousand, for a natural increase of 1.1%. The average number of children reached a high of about 2.3 per family in the early 1980s and rose higher still to 2.4 in the early 1990s. The low point for White fertility came during the economic recession of the late 1980s, when White families were averaging close to 2.0 children per family. White fertility in 2004 is 2.2 children per household.

The crude birth rate for African-Americans in Alaska in 2003-2004 was 17.7 per thousand, and the death rate was 3.5 per thousand, a natural increase of 1.4% per year. Similarly, the crude birth rate for Asians was 26.6 per thousand, and the death rate was 3.8 per thousand, for a natural increase of 2.8%. Crude birth rates for Hispanics were 24.0 per thousand and crude death rates were 1.6 per thousand, for a natural increase of 2.2%. Asians currently have the highest crude birth rate and rate of natural increase of any racial group.

Historical Migration to and from Alaska

As seen in Figure 1.2, migration to or from Alaska has varied widely from year to year. There is no typical migration trend for the state. Rapid growth occurred during and after World War II, represented by an influx of 12,710 persons, or a 12.7% rate of proportional growth due to migration for 1946-47. The highest post-World War II proportional growth due to migration occurred during the build-up for the Korean War in 1950-51 with in-migration of 20,100 persons producing a 14.7% rate of growth; and in 1951-52, with 21,680 immigrants resulting in a 13.6% growth rate. These high percentages were partly related to the small population base in these years. While the net migration for 1981-82 and 1982-83 was numerically larger than that for 1950-51 and 1951-52, it was proportionally much smaller. By 1983-84, the net influx of 24,900 immigrants accounted for only a 5.0% increase in the population.

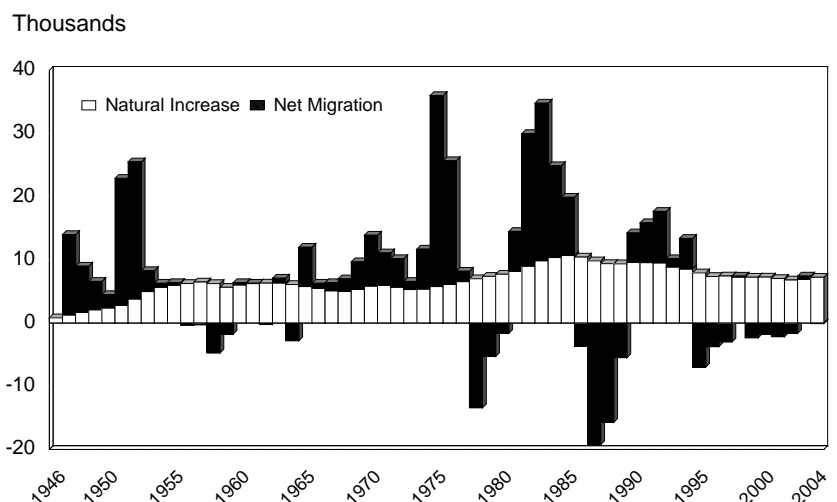

The largest single numerical increase due to migration, 30,222 persons, or an 8.7% growth rate, occurred during pipeline construction in 1974-75. A severe economic recession led to the largest numerical loss, 19,245 out-migrants or a 3.5% population decrease, in 1986-87 and was larger than the 13,414 out-migrants, or -3.2%, which occurred at the end of the pipeline construction in 1977-78.

Historically, the majority of growth from migration in the U.S. occurs in relatively few of the 3,141 counties. Most communities in the U.S. attract relatively few in-migrants each year. Nationally, the highest rates of movement are found among young adults in their twenties. About one-third of persons 20-29 years old moved the previous year. This rate was twice the annual rate found for all persons one year and over. The movement of persons in their twenties also accounts for the fact that about a quarter of all persons under five years of age also moved in the previous year. Most of the movement of young adults is to college, military or first job. Moving rates continue to decline with increasing age.

Recent Migration Trends and Characteristics

Statistics on the movement of people between states and counties are derived from change of address on U.S. Internal Revenue Service tax returns. Alaska tends to have among the highest levels of migration to and from the state, and gross migration of any state in the union. Information on the characteristics of migrants is derived from the 2000 census. Migration to and from the state is partly dependent upon federal military and program policies, which tend to result from unique historical events rather than easily predictable trends. The overall economies of the Pacific and Mountain regions relative to that of Alaska strongly influence migration to and from this state. When employment in Washington, California and Oregon be-

Figure 1.2
Components of Population Change, 1946-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

comes relatively weak, there is a greater tendency to look to Alaska for opportunity and vice versa. As shown in part in Table 1.2, changes in migration to or from Alaska are more a result of the decline of migrants to Alaska than to changes in out-migration. A net loss or gain results from an increase or decrease in the number of in-migrants relative to out-migrants. The higher the rate of gross migration or turnover, the more unstable the population. Thus, one cannot always tell by observing what appears to be a net gain or loss of population whether changes in in-migration or out-migration are the cause. What appears to be massive

Figure 1.4
Migration to/from Alaska by Region 2003-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

out-migration may be a normal six to seven percent out-migration with a sharp decline of in-migrants to the state.

Most of the fluctuation of migrants is accounted for by non-Native migration to or from the state. While there has historically been a moderate migration flow of Alaska Natives to and from the state each year, the flows have been fairly balanced. The net effect has been very little gain or loss of Alaska Natives as a result of migration outside the state.

The vast majority of all persons living in Alaska at the time of the census in 2000 were migrants to Alaska. Only 38.1% of Alaskans were born in the state. Regionally, these proportions varied from a low of 25.0% born in Alaska in Aleutians West Census Area, which was dominated by the highly transient city of Unalaska, to a high of 94.1% for Wade Hampton Census Area. Generally, over 75 percent of the residents of rural Alaska were born in Alaska, compared to 32.1% for Anchorage, 29.5% for Fairbanks and from 33 to 38 percent for Matanuska-Susitna, Kenai and Juneau. For persons not born in Alaska, 23.2% were born in the West, 13.5% in the Midwest, 11.2% in the South, and 6.5% in the Northeast. Another 1.3% were born abroad to American parents and 5.9% of Alaskans were foreign born. The proportion of foreign born in 1990 was 4.5%. This increase reflects, but is lower than, the general U.S. trend. In 2000, about 11% of all persons in the U.S. were foreign born. Similarly, 2.7% of all Alaskans were not U.S. citizens compared to 6.6% for the U.S. as a whole.

Gross migration is the total volume of migration to and from the state that occurs in a year. This is the statistic often used by businesses that depend on turnover of population for their activity, such as shipping companies, moving companies and realtors. These flows are shown in Tables 1.2 and 1.3 and Figures 1.3 and 1.4. Alaska had the third highest level of gross migration (11.6%) of any state in 2004, slightly lower than Nevada (11.8%), and slightly higher than Wyoming (10.3%). The District of Columbia (18.7%) was significantly higher. The average for all states is 6.1% and the lowest gross migration is found in Wisconsin, California, Ohio and Michigan who range from 3.5% down to 3.0%. Alaska's resident population continues to have a very transient component. This doesn't count the highly seasonal workforce.

During the 1980s, gross migration ranged from a high of about 110,500 during 1985-86 to a low of about 84,500 in 1987-88. On average during the 1980s, gross migration represented a number of migrants equal to 18.9% of the state's population each year. The range was between 15% and 22%. Each year between 1980 and 1990 the number of in-migrants averaged 9.9% of the state's population. This number ranged from a low of 6.2% to a high of 13.6%. Similarly, an average number equal to 9.0% of the state's population left Alaska each year. Out-migrants ranged from a low of 8.3% to 10.3% of the population. Armed Forces rotation probably accounted for one-fifth of these migration

flows statewide each year. Flows to or from certain states with key bases are a regular part of the overall migration to or from Alaska, and in some instances strongly influence the importance of certain states in the pattern of migration to or from Alaska.

Since 1995, in-migration flows have averaged 6.6% of the state's population. The rate ranged from a high of 6.9% in 1996-97 to a low of 5.7% in 2000-2001. Out-migration averaged 7.0% during the same period. The movement out of state varied from a high of 7.7% in 1994-95 to a low of 5.9% in 2001-2002 reflecting the then-current lack of economic opportunity in our feeder states. The gross migration rate for 2000-2001 was 11.7%. The general trend over time has been towards lower gross migration to and from Alaska since the early 1980s. This rate has declined steadily from a high of 22.8% gross migration in 1981-82. The general slowdown of migration during the 1990s reflected economic conditions, both within the state and nationwide. If jobs and economic opportunity are available close to home, the tendency to relocate in search of work is diminished. The recent recession slowed migration from Alaska, with little corresponding increase in the rate of migration to Alaska. A small increase in 2003-2004 to 12.5% continues the slightly increasing trend since 2001.

Migration to and from Alaska by geographic region of the United States has been relatively consistent over time. During the 1980s, Alaska's average gross migration was 49.6% with the West, 27.4% with the South, 13.9% with the Midwest, and 6.6% with the Northeast. These regional proportions generally varied by less than two to three percentage points over the course of the decade as shown in Table 1.3.

In 2003-2004, the most recent period for which Internal Revenue Service data are available, 45.2% of gross migration was between Alaska and the West, of which 26.3% was with the Pacific states and 18.9% to or from the Mountain states. Of the Pacific states, Washington accounted for 10.9%, California 8.7% and Oregon 4.9% of the migration. In the 1980's 49.6% of the migration to Alaska came from the West: 34.4% from the Pacific and 15.3% from the Mountain states. The share to and from Washington and California has tended to decline slightly over time and the share with the southern Mountain states has tended to increase.

Similarly, in 2003-2004, the South contributed 31.9% of Alaska's gross migration. The migration to and from the South has remained relatively stable since 1990. Of the Southern flows in 2003-2004, 16.0% were to or from the South Atlantic region, and 11.5% were to or from the West South Central region. Most of this migration is associated with the military. The single southern state contributing most to Alaska's migration was Texas with 7.6%, a flow jointly associated with the oil industry and the military. In 2003-2004, migration to or from the Midwest at 13.0% and

the Northeast at 5.7%. These regions have generally declined in contribution since the 1980s. Alaska's migration to or from foreign countries has increased from 2.5% in the 1980s to 4.2% in 2003-2004, down slightly from a high of 4.4% in 2001-2002. This movement is largely a combination of immigration and military rotations to or from overseas bases. Foreign immigrants, who currently number about 1,300 per year, have continued to be a larger share of all migration to Alaska since 2000. In 2000, 5.9% of the population of Alaska was foreign born, 2.7% of the population were not U.S. citizens and 3.2% were naturalized citizens.

Population Composition: Historical Race Composition

Prior to the 1929 territorial census, little reliable data were available on Alaska's Native Americans. In 1929, some 29,983 Native Americans made up 50.6% of the state's population. Although their numbers have grown rapidly since 1929, the non-Native population has grown more rapidly, resulting in a gradual decline in the proportion of Alaska's population who are Native American. Since 1990, however, the proportion of Native Americans has slowly increased from 15.7% to about 17.7% in 2000 (Table 1.4) as a result of military cutbacks and the overall slowing of non-Native migration to Alaska.

In the late 1990s, the Federal Office of Management and Budget (OMB) redefined the way race is collected to allow individuals to define themselves as "multi-race". With the 2000 census, people could check all of the races that they thought defined them. As a result, race as reported in 2000 is no longer compatible with earlier data and statistics on race are far more complex. In recent decades, one had to choose one of four races: White, Black or African American, American Indian or Alaska Native, or Asian and Pacific Islander.

The new OMB guidelines establish a five race classification for federal race data on race and ethnicity. It also allows for identifying origins in more than one race.

American Indian or Alaska Native: A person having origins in any of the original peoples of North or South America (including Central America), who maintains tribal affiliation or community attachment.

Asian: A person having origins in any of the original peoples of the Far East, Southeast Asia or the Indian subcontinent, including Cambodia, China, Japan, Korea, Malaysia, Pakistan, the Philippines, Thailand and Vietnam.

Black or African American: A person having origins in any of the black racial groups of Africa. Terms such as "Haitian" or "Negro" can be used in addition to "Black or African American".

Native Hawaiian or Other Pacific Islander: A person having origins in any of the original peoples of Hawaii, Guam, Samoa or other Pacific Islands.

White: A person having origins in any set of the original peoples of Europe, the Middle East, or North Africa.

With respect to ethnicity, the standards provide for the collection of data on whether or not a person is of "Hispanic or Latino" culture or origin. A person of Cuban, Mexican, Puerto Rican, South or Central American, or Other Spanish culture or origin can identify themselves as such, regardless of race. The term "Spanish Origin," can be used in addition to "Hispanic or Latino".

Under the new guidelines, OMB provides for multi-race reporting. This allowed persons of mixed race to identify themselves as a combination of races rather than being forced to choose one race. The permutations and combinations of five races result in 63 possible race/ethnicity categories. All race in the 2000 census is self reported and represents each individual's interpretation of the choices presented. In addition to the race and ethnic categories recognized by OMB, the census allowed people to define themselves as "some other race" and to write in their race. Most often the "some other race" response involved confusion over Hispanic or Latino as a race rather than an ethnicity. To make data comply with federal program uses the Census Bureau has created a new set of modified race estimates that allocates "some other race" to the OMB categories. In 1990, the bureau created a Modified Age, Race, Sex (MARS) file to correct for errors in race and age reporting. The bureau has created a comparable set of estimates from the 2000 Modified Race to distribute the "other race" and our office has modified it further to correct for age errors in the 2000 census in Alaska.

The changes in the definition of race makes 2000 race data incompatible with prior censuses. There is no longer a direct answer to "How many Alaska Natives live in Alaska?" Because of multi-race, the answer must be in the form of a range rather than a single number. The number of American Indians or Alaska Natives who declared one race alone in

2000 was 98,043 or 15.5% of the population. The number of American Indians or Alaska Natives who declared this race Alone or in Combination with one or more races was 119,241 or 18.1% of the population. Alaska had the second highest proportion of multi-race in the U.S. after Hawaii.

As of this date, figuring rates of occurrence for births, deaths and other social and work related programs is also more difficult because data on these characteristics are not yet collected on a multi-race basis. In addition, most federal programs that use race have not yet revised their requirements to define how they will deal with multi-race. The use of current incidence statistics not collected on a multi-race basis with multi-race denominators will produce misleading rates. In addition to multi-race estimates, our office produces "bridge" series race estimates which define

race as it was defined in the 1990s. Until numerator data is produced on a multi-race basis we recommend that anyone producing incidence rates use the "bridge" series denominators. For a more extensive discussion of multi-race, the reader is directed to Greg Williams' Race and Ethnicity in Alaska, *Alaska Economic Trends*, October 2001.

In addition to the problems of race in the 2000 Alaska census, problems in processing the 2000 census have led to problems of misrepresentation of age for children under 18. The problems are particularly noticeable in rural Alaska. The basic census form used in door-to-door enumeration allowed for only 5 household members to respond (six on the mail-out form). If the household was larger, the persons were listed on the back and a supplementary form was used for the characteristics of the additional persons. In the processing, the private data contractor separated the supplementary forms and the connecting information was lost. This meant that the age of children less than 18 years of age had to be "imputed" for a substantial number of children based on the age distribution of similar households by a method statisticians refer to as a "hot deck". The method assumes that people list their children on the census form in random order, rather than sequentially. In fact, most persons listed their children in age order. As a result, a large number of children whose age had to be imputed were young children rather than a normal distribution by age under 18 years of age. The result was that for parts of rural Alaska with large households the census reported too many children ages 10-17 and too few children 0-9. The problem is particularly acute for ages 0, 1 and 2. Ten census areas had errors of at least 6%. In Wade Hampton, we estimate that 16% of the children had misreported age and Bethel had almost 15%. We have adjusted the age structure of 10 rural Alaska boroughs and census areas and the state total to correct for this problem. Users of 2000 census data for children by age group should be aware that the data for rural Alaska as reported in census tables may be inaccurate. Data for children under 18 as a whole should be accurate. Children were not missed by the census, but their reported age may be in error. The corrected areas are: Wade Hampton Census Area, Bethel Census Area, Dillingham Census Area, Nome Census Area, North Slope Borough, Valdez-Cordova Census Area, Northwest Arctic Borough, Yukon-Koyukuk Census Area, Southeast Fairbanks Census Area and Lake and Peninsula Borough. Since large families in these areas are predominately Alaska Native, the correction was applied only to the American Indian and Alaska Native race group. There also appears to be a small erroneous imputation of sex as well in ages 0, 1 and 2 for Alaska in the 2000 census. Because of time constraints, we have not attempted to correct for this error in this set of estimates.

Looking at 2000 census data before adjustment to distribute "Other Race", the census showed that 192,398

persons, or 30.7% of the population of Alaska, considered themselves to be either wholly or partly some race other than White. The number and proportions of persons by race and broad tribal group for 1980 and 1990 are shown in Tables 1.5-1.7. Of the 626,932 persons in Alaska in 2000, Native Americans Alone made up 98,043 and of the 658,723 race responses; the number of persons reporting Native American Alone or in Combination was 119,241. For these estimates, all Native Americans living in Alaska are referred to as Alaska Natives, even though a small percentage of them belong to continental U.S. tribal groups. About 20 percent of all Alaska Natives are estimated to be living outside of Alaska. The economic boom of the early 1980s brought many non-Natives to the state. As a result, the proportion of Alaska Natives dropped from 16.0% in 1980 to 15.7% in 1990. By 2000, the percentage of Native Americans was between 15.6 and 18.1%. Alaska Natives made up 4.4% of all Native Americans nationally in 1990.

In 2000, Alaska American Indian and Alaska Natives (AIAN) in Alaska made up 4.0% of AIAN Alone and 2.9% of AIAN Alone or in Combination nationwide. In 2000, the White

population accounted for between 434,534 and 463,999 persons, or 69.3% to 70.4% of the population. Other races, primarily African-American, Asian and Pacific Islanders accounted for at least 9.6% of the population in 2000. These groups accounted for 48,853 persons, or 8.9% of the 1990 population. These groups were up from 27,521, or 6.8%, in 1980. In 1990, there were some 17,803 persons of Hispanic origin in Alaska. In 2000, the number had increased sharply to 25,852 Hispanics (4.1%)

Current Population Composition

The July 2004 state estimates are based on the April 1, 2000, Modified Age, Race, Sex (MARS) estimates. As stated earlier, the MARS estimates adjust the census race data to eliminate "other races" and adjust for errors in age reporting at the time of the census. The 2004 estimates by age and sex for single year of age for the state as a whole are presented in Table 1.8. The 2004 and 2003 estimates by age/race/sex and ethnicity for the state as a whole are presented in Tables 1.9 to 1.12. Similar tables for the state's 27 boroughs and census areas are available from the Alaska Department of Labor, Research and Analysis Section, Demographics Unit web site <http://almis.labor.state.ak.us/> under Population Estimates and Projections.

Figure 1.6
Alaska Population by Age and Sex 2000, 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Tables 1.11, 1.13, 1.15 and 1.17 contain population for the entire state by age, Race Alone and sex for 2003, 2002, 2001 and 2000 respectively. Tables 1.12, 1.14, 1.16 and 1.18 contain population for the entire state by age, Race Alone and in Combination and sex for the same four years. These tables for Race Alone or in Combination count the responses, not the individuals. In these tables, a person who marked two or more race categories was counted two or more times, so that the total is higher than the state population. These tables are for selected age groups. Tables for races Alone and Alone or in Combination by single year and the "bridged" race estimates for these years by single year of age are available on our web site.

The size of each age group in the population is affected by its birth, death and migration history and life cycle events. These patterns can be seen in Figures 1.5 and 1.6. For Alaska, the largest factor affecting change in the size of each age group is migration. Migration is particularly high for 18-to-35 year olds and their young children under school age. Migration began to increase sharply during the 1970s. This accounts for much of the dramatic increase in persons currently over 40. The large bulge at ages 35-45 was created by the 1980-90 migration to Alaska. The age structure of Alaska's population compared to that of the U.S. as a whole can be seen in Figure 1.7.

Population Cohorts and Life Cycle Events

The shape of a population depends upon a series of historical and life cycle events. The number of births that occur in a given year creates a "cohort" of persons that gives that group of persons a character that is associated with it for a lifetime. The increase in family size following the

depression and WWII created a series of cohorts that is widely known as the “baby boom”. These larger groups of children strained schools at every level as they passed, experienced reduced job opportunities as they entered the labor market, and will strain the social security system and medical systems as they grow old. Cohorts in local areas are shaped over their lifetime by death and migration. They are increased by forces encouraging in-migration. They are reduced by forces of death and out-migration.

Specific Age Groups

The growth trends for various age groups often differ sharply from those of the population as a whole. These differences in age groups are found in Table 1.19 and Figures 1.8 and 1.9.

While Alaska's total population increased 18.5% between July 1, 1990 and July 1, 2004, children under the age of five declined 5.9%, from 55,859 to 52,537. This age group currently makes up 8.0% of the state's population. From a high in 1993, the number of young children steadily declined to a low of 48,525 in 2000, rising slowly but steadily over the last four years. The number in this age group is extremely volatile, depending on economic conditions. As a result, children under five are generally unreliable as a planning indicator for future elementary school facilities because economic booms and busts can quickly change the size of this age group. Cutbacks in military personnel in the mid 1990s and fewer young adults as a result of low birth rates nationwide in the 1970s and low in-migration have acted to reduce the number of young children in the state.

The population aged five to 13 are the children of elementary and junior high school age. This group has shrunk by 5.5% since its peak of 101,208 in 1998. Children age 14 in 2004 represent the peak of the “echo boom”, that is, they are the children of the last of the baby boomers. Peak baby boomers born in the late 1950s and 1960s tended to get married later and postpone childbearing. Since the largest cohort of “echo boom” kids is just entering high school, the current pressures on middle and high school capacities will ease, and decline in the near future.

The number of high school-age children have tended to be more stable over the years. Alaska's adult population has traditionally been too young to have large numbers of high school-age children. However, their numbers have increased steadily since 1990. In 2004, there were 45,353 youth aged 14-17 in Alaska, up from 30,356 in 1990. This age group has increased from 5.5% of the state's population in 1990 to 6.9% in 2004, the highest proportion since the 1970s. In general, teenagers are less subject to changes in migration flows than younger age groups because their parents are older and generally have more stable jobs. Cutbacks in long-standing oil and government jobs, however, could negatively impact this group. Except for rapid growth areas like Mat-Su, the number of high school students should begin to stabilize and decline in the next year or so.

The age group 18-24 is most subject to increases and declines in economic conditions. While nationwide this group was declining, in Alaska it reached a high of 70,175 in 1984. Since 1984, this group decreased to 56,189 by 1990, a loss of 20% in six years. In 1995, this age group hit a low point at 47,656. Cuts in the military population have also influenced the downward trend in this age group. This group has seen the passing of children born following the end of the baby boom in the early 1970s when fertility hit an all time low. While some have mistakenly interpreted the decline in the size of this age group to out-migration from Alaska, the trend in the size of this age group is in fact primarily a result of the passing of the “baby bust” cohorts through their early 20s. Since 1995, this group has increased steadily with the passing of the leading edge of the “echo boom” into these ages. The small size of this segment of population is a portion of the reason for the relatively low unemployment rates currently being seen in Alaska and nationwide. The decreased supply of labor provided by this smaller generation should create a unique opportunity to increase the employability of persons not currently in the labor force or employed, so long as demand stays firm.

The population aged 25-34 is composed of young adults in the prime ages for family and household formation. It is estimated that this age group peaked in Alaska at 128,401 in 1986. The last part of the "baby boom" has now passed through this age group and these ages increasingly are made up of "baby bust" cohorts. The families in this age group contribute heavily to the number of children under five years of age. By 1990, the persons in this age category numbered 113,233, a loss of 11.8% of young householders since 1986. This age group hit a low of 84,518 in 1999, and has since rebounded slightly to 88,296. As the "baby boomers" moved out of it, this age group declined from 23.7% of the state's population in the early 1980s to just 13.5% in 2004.

Since 1980, growth in the 35-44 age group has been faster than average. This age group still contains a portion of the baby boom generation, defined as individuals born between 1946 and 1964. In-migration of more established families during the 1980s added to the numbers of this naturally large population cohort. In spite of overall losses in the state's population due to the severe economic recession in the 1986-87 period, this age group continued to grow, reaching its highest level of 120,566 persons in 1996. By 2004, the numbers in this age group are falling substantially as more baby boomers age into the 45-54 age group. From almost 20% in the mid 1990s, this age group has declined to 15.9% in 2004.

The 45-54 age group now includes the majority of the post World War II baby boom. This segment of the population grew in Alaska from 8.5% in 1980 to 16.0% in 2004. As of July 1, 2004, there were an estimated 105,137 persons 45-54 years old.

The ages 55-64 have traditionally been the ages at which some Alaskans have begun to move out of state as a result of early retirement. This age group's share of Alaska's population has shown small, but steady increases since 1983 as their numbers have increased by 100 percent. This growth should continue in Alaska over the next 10 years as the oldest baby boomers begin to enter their sixties. There were 59,527 persons aged 55-64 in the state in 2004. Persons 65 years old and older numbered 41,582 in 2004. The size of the population currently 55-64 suggests that the number of senior Alaskans will continue to increase dramatically in coming years. Large numbers of persons over age 40 are also reaching the point in the life cycle where they are beginning to have older parents to care for. Such care, in some cases, is more easily provided in Alaska than by long distance in other states. In-migration of older persons to Alaska, however, remains a very tiny part of either growth or migration. This age group has increased from 2.9% of the total in 1980 to 4.1% in 1990, to 6.3% in 2004. The rate of Alaska's increase tops that of any other state. In spite of the rapid rate of increase, Alaska has by far the smallest proportion of persons 65 and over (6.9%) in the nation. The next smallest percentage is in Utah (8.5% in 2000). The average percent-

age of the population over 65 for the U.S. in 2002 is 12.3%. According to Census 2000, Alaska has the third highest rate of out-migration of its elder population after Washington D.C. and New York. Between 1995 and 2000, there was a net loss of almost 4 percent of persons 65+. Net loss of older Alaskans is somewhat less today than it was during the economic downturn of 1985-90, when the loss was about 5.5%.

Median Age

The population in Alaska is younger than the national average but, because of recent slowing of migration, this gap is narrowing. The 2004 median age in the United States was 36.0, while the median age for Alaska was 33.2 years. By race, the median ages of Alaskans in 2004 are: White Alone 35.7, Native American Alone 26.1, African-American Alone 28.1, Asian Alone 36.1, Hawaiian and Pacific Islanders Alone 23.4 and Two or More Races 16.1. The median age of Hispanics is 24.7. The Native American, Hawaiian and Pacific Islanders and Hispanic populations are much younger because of their higher fertility rates. The African-American population is young because it is largely military. The extremely young age of persons of Two or More Races is the result of an increasing proportion of multi-racial children and a greater tendency of younger Alaskans who may be multi-racial to identify themselves as such. The 2004 median ages by race for the United States as a whole were: White Alone 38.2, Native American Alone 31.8, African-American Alone 31.0, Asian Alone 34.3, Hawaiian and Pacific Islanders Alone 29.7 and Two or More Races 18.6. Nationwide, the median age of Hispanics was 26.7. In 2004 Alaska had the third youngest population in the U.S., after Utah (29.9) and Texas (32.8).

Voting Age Population

According to the July 1, 2003, estimates, the voting age population, those over 18 years old, in Alaska totaled 483,936. Of that population, Whites made up 344,727 (74.6%), Alaska Natives 65,915 (14.3%), Asian 19,662 (4.3%), Hawaiian and Pacific Islanders 2,045 (0.04%), African-Americans 16,646 (3.4%) and Persons of Two or More Races 13,892 (3.0%). Hispanics may be of any race. In 2004, there were an estimated 15,933 voting-aged persons of Hispanic origin. This number is equivalent to 3.3% of the voting age population. In November 2004, there were 472,160 registered voters in Alaska. Thus, a number of registered voters equivalent to 97.6% of the eligible voting age population are currently on the voter registration rolls, down from 103 percent in 2002. While Alaska attempts to purge voter registration rolls, a 13% gross migration each year means that the number of persons on the registers is not a valid measure of the proportion of eligible voters who are registered. Approximately 65% of the voting age population voted in the presidential election in 2004. More detailed data on age of population by election district are shown in Table 3.4.

Dependency

Dependency ratios show how large a burden of support is placed on the working age population by the young and the old. In 2004, every 100 Alaskans of working age supported 46.0 children under 18 years of age (down from 47.7 in 2002) and 9.9 persons over 65 (up from 9.4 in 2002) and a total dependency of 55.9. In 2004, every 100 persons of working age in the United States as a whole supported 46.5 children and 19.9 persons over 65 for a total dependency of 66.4. Thus, working Alaskans have a lower dependency burden than the average American because of the lower burden of elders. It is important to note that the dependency burden for White Alaskans is far less than that for Alaska Natives. Every 100 Alaska Native persons of working age must support 74.5 additional persons compared to 50.2 for Whites. This added burden is made worse by the higher unemployment, lower labor force participation and lower incomes of many Alaska Natives.

Male/Female Composition

In July of 2004, an estimated 318,618 persons, or 48.6% of Alaska's population, were female, compared to 50.9% nationwide. Considered another way, there were 106 males for every 100 females in Alaska in 2004. By race, there were 108.5 White, 101.9 Native American, 108.6 African-American, 88.0 Asian, and 104.2 Pacific Islander males for every 100 females in each racial group. The higher ratio for African-Americans tends to be a reflection of the larger number of young African-American males in the military, and is significantly lower than the 113.2 figure recorded in 2002. Other states with high male/female ratios from Census 2000 are Nevada 104, Colorado 101, Wyoming 101, Hawaii 101, Idaho 101, and Utah 100 males for every 100 females.

While Alaska continues to have the lowest overall percentage of women of any state, the difference is small and has frequently been greatly exaggerated in the popular press. A few Alaska communi-

ties tend to be more heavily male because employment is transient or concentrated in occupations that traditionally have employed mostly males. Military installations, fishing and mining operations are the main sources of distortion of these ratios. Most communities, however, have male/female ratios more in line with the rest of the nation.

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit; and the U.S. Census of Population and Housing, 1990,2000

As shown in Figure 1.10, the highest ratio of males to females is in the age group 60-64 at 113.7 males per 100 females. Ages 55-59 are close behind with a ratio of 113.1 males per 100 females. The next highest male/female ratios by age occurred among the groups aged 50-54, 25-29, 65-69, 20-24, where the ratios were 110.5, 109.0, 107.7 and 107.6 respectively. These ages continue to reflect the male/female pattern of migration at an earlier period in Alaska history. The relatively young age of Alaska's population also adds slightly to the overall male proportion. States with significant older populations, like Pennsylvania (median age 38.0), have more women because of the greater life expectancy among women. The male/female ratio in Pennsylvania during the 2000 Census was about 93 men for every 100 women.

Alaska Households and Living Arrangements

The census counts all persons as living either in households or group quarters. A household occupies a housing unit. The census currently defines a housing unit as a house, an apartment, a group of rooms or a single room intended as separate living quarters. Boats, tents, vans, and caves are included if they are occupied as a usual place of residence. Mobile homes are included provided they are intended for occupancy on the site where they stand. Seasonal residences, Forest Service cabins, or vacant cabins that are habitable are included in the inventory.

The 2000 census counted some 260,963 housing units in Alaska, with 221,599 occupied and 39,364 vacant. Some 21,460, or 8.2%, of all housing units were for seasonal, recreational or occasional use. In 1990, the census counted

232,608 housing units, with 188,915 occupied and 43,693 vacant and the percent of housing units used for seasonal, recreational or occasional use was 7.3%. There was an increase of 28,355 total housing units during the decade, or a growth of 12.2%. The number of occupied housing units or households in Alaska increased by 32,684, or 17.3%, during the decade.

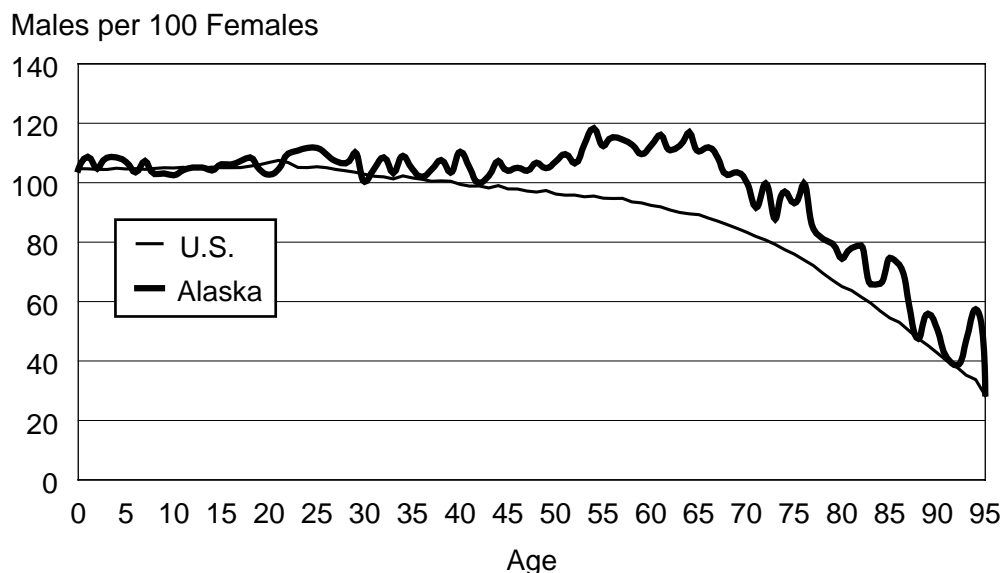

Following the national trend, the number of persons per household in Alaska declined by 0.15 person, from 2.89 in 1990 to 2.74 in 2000. During the same period, in the nation as a whole, persons per household declined by 0.26 person, from 2.63 in 1990 to 2.37 in 2002.

All persons not living in households, live in group quarters. Two general categories of persons in group quarters are recognized: (1) institutionalized persons (such as those in prisons, nursing homes, psychiatric hospitals and residential treatment facilities) and (2) other persons in group quarters (such as those in group homes, college dorms, military barracks, fish processing and logging camp bunkhouses and emergency shelters). Some 19,349 persons (3.1%) lived in group quarters housing in Alaska in 2000. In 2004, there were 21,390 persons living in group quarters in Alaska, up from 18,748 in 2002. A more detailed discussion of living quarters appears in Chapter 2.

Households are broken down into family households and non-family households. A household containing a householder and one or more persons related by birth or marriage makes up a family household. By census definition, not all households contain families. A household composed of two or more unrelated individuals or one person living alone is considered a non-family household. The number of persons in households is shown in Table 1.20 and Figures 1.11 and 1.12.

Some 529,342 persons lived in 188,915 households in Alaska in 1990. Of that population, 454,726 persons, or 82.7%, lived in 132,837 family households. The remaining 74,616 persons, or 13.6%, lived in 56,078 non-family households. Overall, 70.3% of all households are family households and 29.7% are non-family households. In 2004, an estimated 234,714 households existed in Alaska. Of these, 157,413, or 67.1%, were family households and 77,301, or 32.9%, were non-family households. Households in the United States as a whole

Figure 1.10
Males Per 100 Females by Age, U.S. and Alaska, July 1, 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit; and the U.S. Census Bureau

in 2004 were almost identical in their distribution: 67.0% family and 33.0% non-family. The proportion of persons in family households continues to decline nationwide.

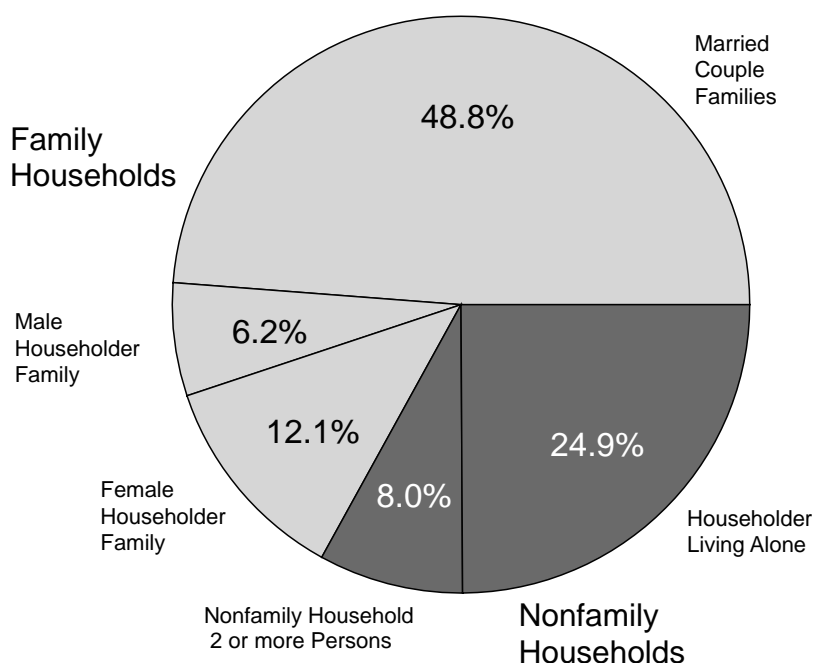

Family household types are husband-wife, male-headed and female-headed households. A married couple household is a family in which the householder and spouse are counted as members of the same household. Male- and female-headed households consist of a single adult head and at least one younger or older related dependent. Of Alaska's 132,837 family households in 1990, 106,079 were husband-wife, 8,529 were male-headed, and 18,299 were female-headed. These comprised 61.1%, 3.8% and 7.8% of all households respectively. By 2004, it was estimated that there were 114,598 married couple households, down by 839 from 2002, 14,481 male-headed households (up by 1,163 from 2002) and 28,334 female-headed households (up by 2,131 from 2002) in Alaska. These made up 48.8%, 6.2% and 12.1% of all households in the state, respectively. Traditional husband-wife families continue to decline and today make up less than half of all households.

In 2003, the latest year for which national data is available, Alaska's households are about as likely to contain married couple families and somewhat more likely to contain a male-headed household with no spouse present than households of the nation as a whole. Nationwide, 50.5% of all households were married couples: 4.3% are male-headed, family households and 12.5% female-headed.

In 2004, Alaska had 86,991 households with related children. Of these related-children households, 57,080, or 65.6%, were in married-couple families. A single-female householder was present in 19,975, or 23.0%, of the households with related children, and a single-male householder was present in 9,936, or 11.4%, of the households with related children. Of all households containing children living with one parent in 2004, 33.2% were male-headed households and 66.7% were female-headed households.

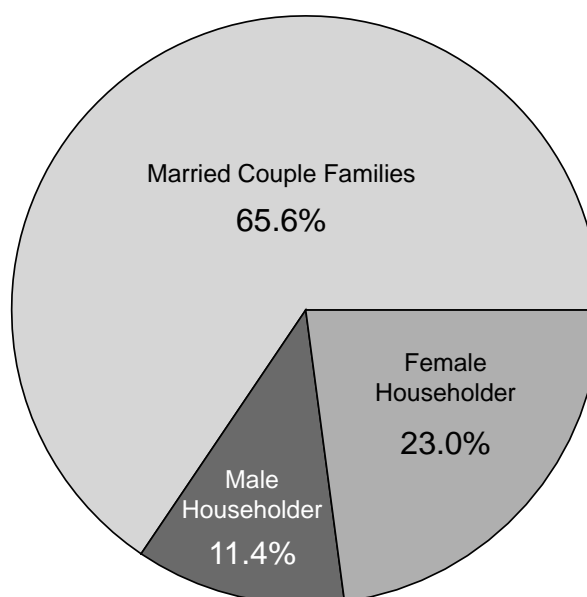

In 2000 there were 88,484 households within Alaska with related children. Of these, 63,245, or 71.5%, were married couple families, 17,243, or 19.5%, female-headed families and 7,996, or 9.0%, male-headed families.

Figure 1.11
Alaska Households by Type, 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Figure 1.12 - Household Living Arrangements of Children, Alaska, 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Of all households containing children living with one parent in 2000, 31.7% were male-headed households and 68.3% were female-headed households.

Traditional households containing a husband, wife and related children made up only 24.3% of all households in Alaska, down from 28.5% in 2000. In 2003, traditional households made up 25.3% of the total households in Alaska, somewhat higher than the national average of 22.4% in that year. In part, this reflects Alaska's younger population and higher fertility. Between 1990 and 2004, the proportion of households with children living with married couple families continued to decline, while the proportion of female- and male-headed households with children continued to increase. The number of male and female householders with related children have both risen, though the percentage of female-headed households has fallen, as the number of male-headed households rose faster than the number of female-headed households.

Persons living alone or unrelated persons living together account for the non-family households. Of the 69,263 non-family households in 2000, 52,060 contained persons living alone, and 17,203 contained unrelated persons living together. In 2004, of an estimated 77,301 non-family households in Alaska, 58,493 (24.9% of all households) contained persons living alone, and an additional 18,808 (8.0% of all households) contained two or more unrelated individuals. Since 2000, these rates in the state have gradually increased. Nationwide in 2003, the latest year for which we have nationwide data, the proportion of households containing a single person living alone was 26.8%, and the proportion of households containing two or more unrelated individuals was 5.8%. Alaska's higher percentage of households containing two or more unrelated individuals may reflect our younger population.

Chapter 2

Alaska Boroughs and Census Areas

Introduction

This chapter presents detailed estimates of population by race, age, and male/female for all boroughs and census areas. There is detailed analysis of geographic variation for population trends, households, components of change, and population composition.

Boroughs and Census Areas

Alaska is comprised of both organized boroughs and census areas. As of July 1, 2004, there were 16 organized boroughs within the state. Boroughs in Alaska are the equivalent of county governments in the rest of the United States. Four of these boroughs, the Municipality of Anchorage, Juneau, Sitka and Haines are city/boroughs, the equivalent of city/county governments, similar to City and County of San Francisco, California. Haines Borough became the fourth city/borough late in 2002. The City of Haines dissolved on 17 October 2002. The boundaries of the former City of Haines will become the Haines CDP. The remaining unorganized territory, which accounts for about 59 percent of the state's land area, is divided into 11 census areas for statistical purposes by the U.S. Bureau of the Census. Although these are only statistical units, they are considered as county equivalents by the federal government for federal program purposes. Many, but not all, of the boundaries of the census areas tend to follow Native regional corporation boundaries. Ten of the boroughs and all of the census areas have independent, incorporated cities within their boundaries. Bristol Bay Borough and Yakutat Borough contain no organized cities. The reader may refer to the maps that accompany the place estimates in Chapter Four of this publication for help in identifying borough and census area boundaries of Alaska.

Since there have been a number of recent borough formations, there is no direct historical comparison among all of the borough and census area boundaries. The boundaries of the Northwest Arctic Borough correspond to Northwest Arctic Native Association boundaries and include the 3,298 square miles of land transferred from North Slope Borough at the time of incorporation. No population was involved in this land transfer, so the historical series is still 100 percent compatible with the Kobuk Census Area and North Slope Borough for 1980 onward.

The Aleutians East Borough and Aleutians West Census Area were formed out of the 1980 Aleutian Island Census Area and a small area of unpopulated land transferred from the 1980 Dillingham Census Area. Similarly, Lake and Peninsula Borough and the 1990 Dillingham Census Area were formed out of the 1980 Dillingham Census Area.

At the time of its formation, a segment of the 1980 Dillingham Census Area containing 22 housing units, but no population, was annexed to the Kodiak Island Borough. In addition, a segment of the northernmost part of the 1980 Dillingham Census Area was transferred to the Aniak Census Subarea of the Bethel Census Area. This segment contained no population or housing units.

The Denali Borough, incorporated in December of 1990, was formed primarily out of the Yukon-Koyukuk Census Area and includes Denali National Park and all communities on the Parks Highway between Anderson and the Matanuska-Susitna Borough. These communities are Cantwell, McKinley Park, Healy, Anderson, Ferry and Lignite. The borough also included a small portion of Southeast Fairbanks Census Area which has no population.

In 1992, Yakutat Borough was formed out of the Skagway-Yakutat-Angoon Census Area. The remaining area has been renamed the Skagway-Hoonah-Angoon Census Area. In 1997, Yakutat Borough annexed an additional 2,878 square miles from the Valdez-Cordova Census Area. The incorporation of all the remaining unorganized territory into boroughs has been studied, public meetings held and a model borough plan developed by the Alaska Boundary Commission. Bills have surfaced almost annually over a long period in the Alaska legislature to complete the borough formation process, despite the opposition of many local unincorporated areas.

Population Trends

Alaska experienced phenomenal growth during recent decades, most of which has been centered in urban and suburban areas of the state. This is evident in Figure 2.1, which shows the dominance by the Anchorage/Matanuska-Susitna region over other economic regions from about 1959 to the present. Table 2.1 together with Figures 2.1 and 2.2 provide the population estimates and help illustrate the changing demographics during this period.

In 2004, 78.5 percent of Alaska's population was found in the following five boroughs: Municipality of Anchorage (277,498), Fairbanks North Star Borough (84,979), Matanuska-Susitna Borough (70,148), Kenai Peninsula Borough (50,980), and Juneau Borough (30,966). Figure 2.2 compares the growth trend of these boroughs by decade beginning in 1960.

Population growth is sometimes sporadic over a period of time. Between 1980 and 1985, the state grew at an average annual rate of 5.9%. During the economic bust between

1985 and 1990, the state only grew at a 0.3% annual rate. For the 1990-1995 period Alaska grew at a 1.8% annual rate and for the 1995-2000 period, the average annual growth slowed to 0.8%. The 2000-2004 period saw an average annual increase in growth to 1.0% of the state's population. After 2000, the majority of the state's growth occurred in the Anchorage/Matanuska-Susitna region with the Matanuska-Susitna Borough experiencing the fastest rate of growth. That area's population increased an average of 3.9% annually during the past four years; this was nearly four times faster than the statewide average. Faster than average population growth also occurred during 2000-2004 within the Municipality of Anchorage (1.5%), and the Wade Hampton and Bethel census areas (both 1.2%).

Lower than average growth occurred in the Kenai Peninsula and Fairbanks North Star Boroughs (both 0.6%), the Nome Census Area (0.5%), Northwest Arctic Borough (0.3%), the Juneau City and Borough (0.2%) and the Southeast Fairbanks Census Area (0.1%). The growth in Southeast Fairbanks, which reverses a downward trend, seems to be attributable to the reactivation of Fort Greely as a missile defense base.

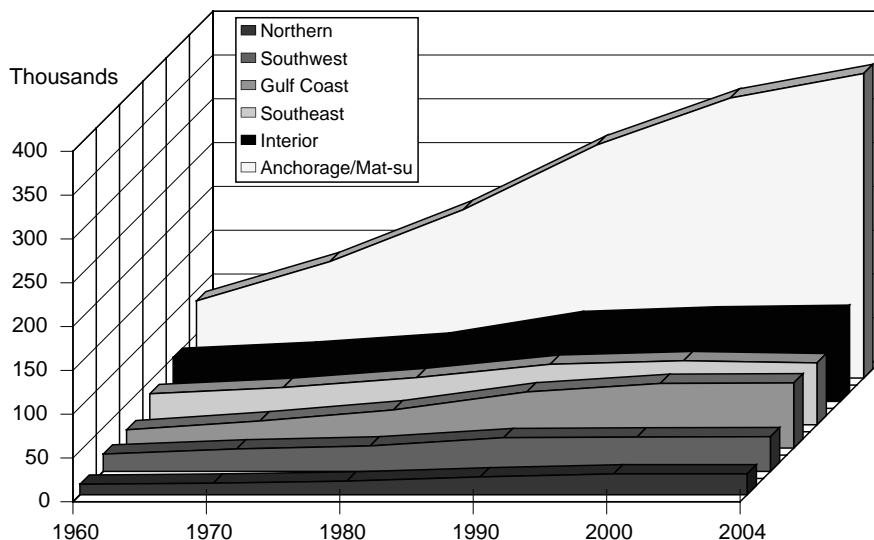

In contrast, the remaining seventeen of Alaska's county equivalent areas had average annual losses of population between 2000 and 2004. The largest percentage losses were in Yakutat City and Borough (-4.0%), Bristol Bay Borough (-3.2%), Lake and Peninsula Borough (-3.0%) and Prince of Wales-Outer Ketchikan Census Area (-2.4%). These losses are mainly attributed to slowdowns in the fishing and/or logging industries. In Southeast, in addition to Yakutat and Prince of Wales-Outer Ketchikan, Skagway-Hoonah-Angoon Census Area (-2.4%), Ketchikan Gateway Borough (-1.8%), Wrangell-Petersburg Census Area (-1.6%), and Haines Borough (-1.5%) all declined. In the Southeast Region, only the Juneau City and Borough gained population (0.2%), as people moved there from other areas of the region. In the Northern and Interior Regions, Yukon-Koyukuk Census Area, North Slope Borough (both -0.9%) and Denali Borough (-0.6%) lost population.

Group Quarters

As indicated in Chapter 1, two general categories of persons in group quarters are recognized: institutionalized persons (such

as those in prisons, nursing homes or military barracks) and other persons in group quarters (such as those in rooming houses, group homes, college dorms, emergency shelters, or logging and fish processing bunkhouses). In 2004, an estimated 21,390 persons or 3.2% of Alaska's population lived in group quarters housing in Alaska, up slightly from 19,349 persons or 3.1% in 2000. Table 2.2 provides housing information by group quarters for all boroughs and census areas by labor market regions for the period 2001-2004.

Figure 2.1
Population by Economic Region - 1960 to 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Figure 2.2 - Average Annual Growth:
Five Most Populous Alaska Boroughs - 1960 to 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

According to the 1990 census, the proportion of persons in group quarters housing in Alaska by type was as follows: military (42.5%); fish processing, logging and miscellaneous group quarters (26.5%); correctional institutions (12.7%); college dorms and religious group quarters (6.3%); nursing homes (5.8%); homeless and abused shelters (2.2%); juvenile institutions (1.9%); rooming houses, group homes, halfway houses, etc. (1.6%); visible street locations (0.4%); and hospitals, including handicapped (0.4%).

The 2000 census shows the following proportions in group quarters: military (20.5%); fish processing, logging and miscellaneous group quarters (20.9%); correctional institutions (17.2%); college dorms and religious group quarters (9.5%); nursing homes (4.2%); homeless and abused shelters (not reported); juvenile institutions (2.2%); rooming houses, group homes, halfway houses, etc. (9.2%); visible street locations (not reported); and hospitals, including handicapped (1.4%).

Approximately 57% of Alaska's group quarters population in 2004 were found living in the Municipality of Anchorage and Fairbanks North Star Borough. Military barracks, University of Alaska dormitories, State of Alaska correctional facilities, and a combination of for profit and non-profit

group homes, nursing homes, and homeless shelters made up the volume of group quarters locations in these more populated areas.

People living in group quarters housing dropped 48% in the Aleutians West Census Area between 1990-2000 due mainly to the closing of the Adak Naval Air Station; however, the Aleutian Chain continues to be dominated by group quarters living connected with fishing and the seafood processing industry, with about 45% of its total population in group quarters in 2004. In 2004, the Aleutians East Borough still had the greatest proportion of their population living in group quarters housing (52.1%) followed by the Aleutians West Census Area (45.4%). The overall statewide average was 3.2% in 2004.

Other areas in the state with relatively high proportions of group quarters housing were Yakutat (9.1%), Fairbanks North Star Borough and Southeast Fairbanks Census Area (both 5.2%), Denali Borough (4.5%), Northwest Arctic Borough (4.0%), and Sitka Borough (3.1%). Group quarters in Denali Borough, Southeast Fairbanks Census Area and Fairbanks North Star Borough are largely military in character. A state-run Pioneers' Home in Sitka as well as an active Coast Guard presence and Sheldon Jackson College make up the group quarters housing in that Southeast Alaska

Figure 2.3
Lived in a Foreign Country Five Years Ago, Percent as of April 1, 2000

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

community. Logging in Yakutat and the Red Dog Mine in Northwest Arctic Borough account for the group quarters in those two areas.

Census Area Housing Units and Households

Comparative information on housing units and households for Alaska by labor market region and census area are shown in Table 2.2. The number of occupied households in Alaska in 2004 was estimated at 234,714, an increase of 13,115 or 5.9% since 2000. The number of persons per household on a statewide basis declined slightly from 2.74 in 2000 to 2.70 in 2004.

In 1990, Alaska's homeowner vacancy rate was 4.5% and the rental vacancy rate was 8.5%. At the time of the 1990 census, 16,991 or 7.3% of housing units classified as seasonal, recreational or occasional use were vacant. Boroughs or census areas that had the highest proportion of such housing were: Lake and Peninsula Borough (34.9%), Yukon-Koyukuk Census Area (27.5%), Nome Census Area (26.7%), Bristol Bay Borough (23.8%), Skagway-Yakutat-Angoon Census Area (23.4%), Matanuska-Susitna Borough (21.4%), Southeast Fairbanks Census Area (19.3%), Valdez-Cordova Census Area (18.6%), Haines Borough (18.5%), Kenai Peninsula Borough (14.6%), and Dillingham Census Area (13.0%). In some rural areas, such housing

may be associated with fish camps or fish processing. In other areas, particularly on the road system, such housing tends to be primarily for seasonal recreational purposes.

In 2000, Alaska's homeowner vacancy rate was 1.9% and the rental vacancy rate was 8.5%. At the time of the 2000 census, 21,474 or 8.2% of housing units classified as seasonal, recreational or occasional use were vacant. Boroughs or census areas that had the highest proportion of such housing were: Lake and Peninsula Borough (58.3%), Bristol Bay Borough (38.9%), Yakutat Borough (35.7%), Denali Borough (30.5%), Yukon-Koyukuk Census Area (28.9%), Dillingham Census Area (27.1%), Skagway-Yakutat-Angoon Census Area (22.3%), Northwest Arctic Borough (22.2%), Haines Borough (21.2%), Nome Census Area (19.2%), Matanuska-Susitna Borough (19.2%), Southeast Fairbanks Census Area (16.4%), Kenai Peninsula Borough (18.3%), Valdez-Cordova Census Area (13.9%), Wade Hampton Census Area (13.4%), Aleutians East Borough (11.0%), Prince of Wales-Outer Ketchikan Census Area (10.5%), Wrangell-Petersburg Census Area (9.9%) and Bethel Census Area (9.8%).

A household includes all persons who occupy a housing unit, which can be a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied

Figure 2.4

Lived in a Different State Five Years Before, Percent as of April 1, 2000

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

as separate living quarters. Areas associated with larger households are predominately Native American areas in northern and western Alaska. In 2004, these areas included Wade Hampton Census Area with an average of 4.45 persons per household, followed by Northwest Arctic Borough (3.81), Bethel Census Area (3.77), North Slope Borough (3.43), Nome Census Area (3.39), Dillingham Census Area (3.12), Kodiak Island Borough (2.99), and Lake and Peninsula Borough (2.91). This ordering is unchanged from 2002, though the persons per household is slightly lower for each area.

The smallest households were found in Denali Borough (2.16), followed by Haines Borough (2.26), Skagway-Hoonah-Angoon Census Area (2.27), Aleutians West Census Area (2.33), Bristol Bay Borough (2.36), Wrangell-Petersburg Census Area (2.44), Ketchikan Gateway Borough and Valdez-Cordova Census Area (both 2.47). The order in this list is slightly different than in 2002, as Ketchikan Gateway Borough and Wrangell-Petersburg Census Area have seen their household sizes fall below that of Valdez-Cordova. In every case, however, the household size has fallen slightly, as the population ages. Southeast Alaska is well-represented on the list of small household sizes, as the median age there tends to be older and there is a higher incidence of households that no longer contain children.

Population Density

The density of Alaska's population is shown in Table 2.3. Overall, Alaska's land area is equal to 16.1% of the entire United States. In 2004, Alaska averaged 1.15 persons per square mile compared to 83.01 persons per square mile nationally. As discussed elsewhere, because of federal, state and Native ownership and land use and accessibility, these numbers can be somewhat misleading.

The highest population density in Alaska was found in the Municipality of Anchorage with 163.52 persons per square mile. The lowest density of people was found in Alaska's interior with the Yukon-Koyukuk Census Area averaging less than 0.04 person per square mile. Sixteen boroughs and census areas had population densities that averaged less than 1.0 person per square mile. In 2004, the Municipality of Anchorage was followed by Fairbanks North Star Borough (11.54), Juneau Borough (11.40) and Ketchikan Gateway Borough (10.57), all down slightly from their 2002 levels.

Some borough and census area populations are limited to small parts of their total area, so population density of settled areas may be considerably higher than what is officially given. For example, most of the population of the Matanuska-Susitna Borough is concentrated in the Susitna River Valley adjacent to Anchorage. In this case, population

Figure 2.5
Lived in the Same County Five Years Ago, Percent as of April 1, 2000

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

density in this area would be much greater than the 2.84 persons per square mile average that was given for the borough average.

Census Area Components of Change

Population change consists of two components: natural increase, which is births minus deaths, and net migration, which is in-migration minus out-migration. These statistics are presented in Table 2.3. In addition, birth and death rates and proportion of Alaska's population are included for each of the areas covered. In terms of net population change, the major population centers garnered the largest increases, with the Municipality of Anchorage showing the largest increase between 1990 and 2000, adding 33,945 persons, followed by the Matanuska-Susitna Borough (19,639), Kenai Peninsula Borough (8,889), Fairbanks North Star Borough (5,120), Juneau Borough (3,960) and Bethel Census Area (2,390). The areas which had a net loss of population between 1990 and 2000 included Aleutians West Census Area (-4,013), Yukon-Koyukuk Census Area (-1,968), Wrangell-Petersburg Census Area (-358), Skagway-Hoonah-Angoon Census Area (-244), Bristol Bay Borough (-152), and Prince of Wales-Outer Ketchikan Census Area (-121).

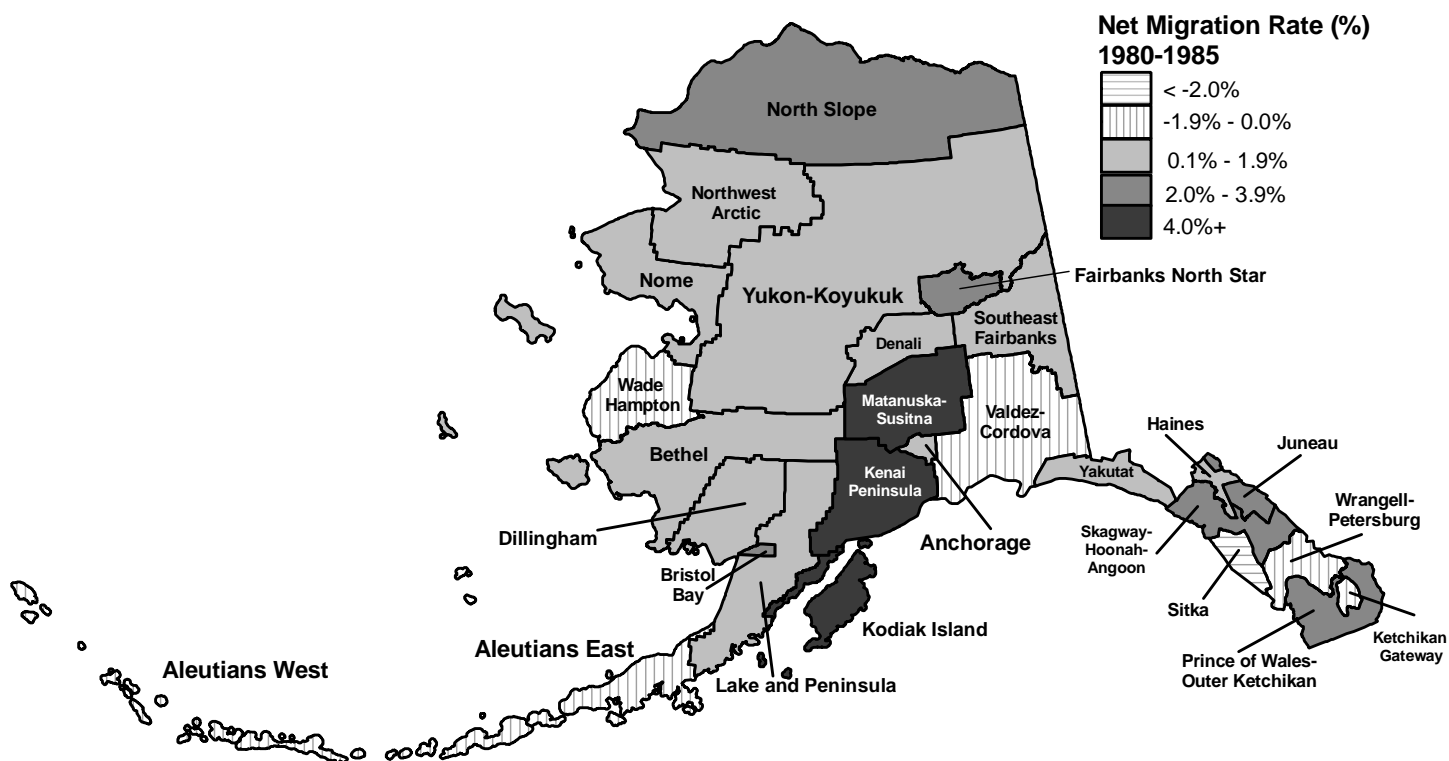

Between April of 2000 and July of 2004, 8 boroughs and census areas gained population, while 19 had net losses.

The largest growth from 2000 to 2004 occurred in the Municipality of Anchorage (3,896) and Fairbanks North Star Borough (2,848). Matanuska-Susitna Borough (2,622), and Southeast Fairbanks Census Area (281) made up most of the rest of the state's growth. The Municipality of Anchorage grew primarily through natural increase (12,955), which outstripped net migration (4,260). The Matanuska-Susitna Borough grew primarily through net migration (8,424), which exceeded natural increase (2,402). Except for the Matanuska-Susitna Borough, every area with a positive population change saw their natural increase (positive) exceed their net migration (generally negative).

Births and Deaths

In 2003-2004, the birth rate for Alaska was 15.8 births per 1,000 population. This was somewhat below the 1990-2000 decade average of 18.6 births per 1,000 population, and a slight increase from the previous two years' rates of 15.5 per 1000; however, the state was still above the national average of 14.1 births. The highest birth rates were found in areas of the state with a higher than average Native American population. These areas in 2003-2004 included: Wade Hampton Census Area with 28.8 births per 1,000 population, Bethel Census Area (24.8), North Slope Borough (23.7), Northwest Arctic Borough (23.2) and Nome Census Area (20.9). The birth rates in these areas have declined since the

Figure 2.6
Average Annual Alaska Net Migration, 1980-1985

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

1990s, although the Wade Hampton Census Area still has one of the highest birth rates of any county in the nation.

Birth rates in the state were lowest along the Aleutian Chain and in Southeast Alaska. The Aleutians East Borough, and the Aleutians West Census Area, where 65-66 percent of the population is male, many of whom work in fishing or fish processing, had relatively low birth rates of 4.9 and 6.4 respectively per 1,000 population in 2003-2004. In Southeast, where the median age of the population is the oldest in the state, lower than average birth rates were found in Haines Borough (7.4), Prince of Wales-Outer Ketchikan Census Area (8.6), Skagway-Hoonah-Angoon Census Area (9.3), Yakutat Borough (10.2), Wrangell-Petersburg Census Area (11.4), Juneau City and Borough (12.4), Sitka Borough (12.7) and Ketchikan Gateway Borough (13.1).

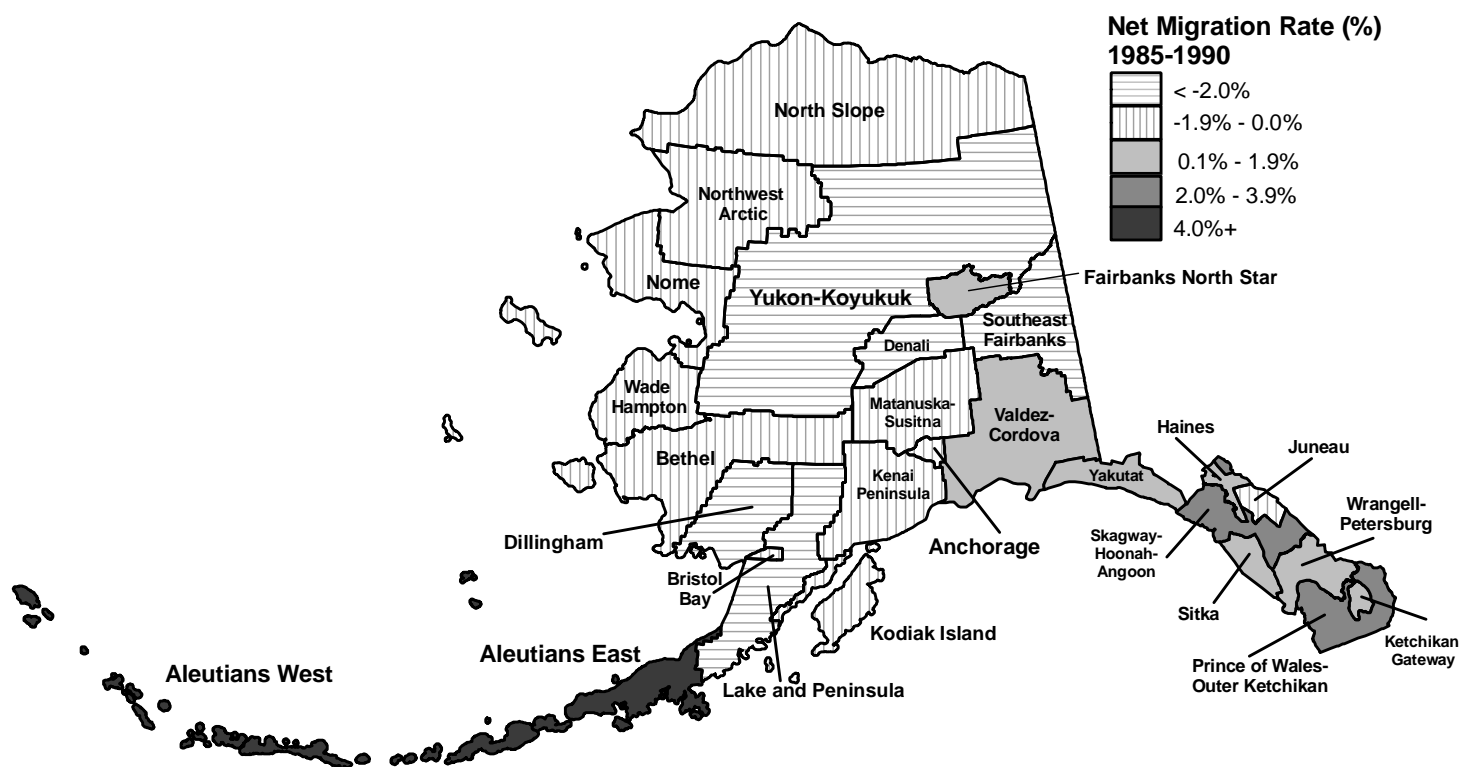

Alaska's death rate was 4.6 per 1,000 population in 2003-2004. This was slightly higher than the rate between 1990-2000. The state's lowest mortality rate was 2.3 per 1000 in Aleutians East Borough, followed by the Skagway-Hoonah-Angoon Census Area (2.9), Denali Borough (3.2), and the Aleutians West Census Area (3.4). The state's highest mortality rates were in Southeast Fairbanks Census Area (8.8), Wrangell-Petersburg Census Area (7.8), Yukon-Koyukuk

Census Area (7.1) and the Ketchikan Gateway Borough and Nome Census Area (both at 6.6). Below-average mortality rates for 2003-2004 were reported for three of Alaska's five largest urban areas: Fairbanks North Star Borough, Juneau Borough and Municipality of Anchorage (all at 4.2), while Matanuska-Susitna Borough (4.7) and Kenai Peninsula Borough (6.0) were slightly above the average. In the 2003-2004 period, 2,257, or 74.5%, of all deaths in the state were reported in these five boroughs.

Patterns of Migration

Migration is the third major component of demographics after births and deaths that is used to estimate population. The term migration refers to the movement of people across a boundary such as a national, state or county border for the purpose of establishing a new permanent residence. Movement across international boundaries is referred to as immigration or emigration. Movement into or out of a state or county is referred to as in-migration or out-migration. The difference between in- and out-migration is net migration. The total volume of migration (in migration plus out migration) is known as gross migration. Movement from one location to another within a county is referred to as local movement. Tracking and explaining migration may be extremely complex and reflects many life cycle, work and personal events.

Figure 2.7
Alaska Average Annual Net Migration, 1985-1990

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Each decade, the U.S. census asks a sample of the population over five years of age, where they lived five years ago. While this question misses short-term movements, it does tend to capture counties with high and low volumes of migration and counties that tend to attract in-migrants from international, U.S., Alaska or local origins. At the time of the census in 2000, only 46.2% of the state's residents stated that they lived in the same house they lived in during 1995. Over half had changed residences at some time during the last five years. Almost half of these (20.5%) were local movers who had simply moved to a different house in the same borough or census area where they lived in 1995. Another 7.5% lived in a different borough or census area in 1995 (in-state migrants). The remaining 18.5% moved to Alaska from another state (inter-state migrants) or abroad between 1995 and 2000. Note that overall interstate migration is twice as large as in-state movement on a statewide basis. There is a dramatic difference in the relative influence of interstate and intrastate migration in different parts of the state.

Place of residence statistics suggest that there is a high degree of transience among about a quarter of the state's population and that transients are heavily concentrated in Alaska's urban areas. For example, 87.6% of the 2000 residents of Wade Hampton were living in the census

area in 1995. In contrast, only 47.2% of the population of Fairbanks, 52.4% of Matanuska-Susitna, 61.8% of Kenai Peninsula, and 73.9% of Anchorage, 76.4% of Juneau, lived in the boroughs in 1995. This urban growth is the result of migration from outside the state and from rural areas within Alaska.

Some 12,564 persons (2.2%) indicated that they lived in a foreign country five years ago. These are not all recent foreign immigrants. Some are Americans who were living abroad. The vast majority (95.0%) of these persons lived in 11 areas: the Municipality of Anchorage (53.1%), Fairbanks North Star Borough (18.4%), Matanuska-Susitna Borough (5.6%), Kodiak Island Borough (4.6%), Aleutians West Census Area (3.0%), Juneau Borough (2.9%), Kenai Peninsula Borough (2.7%), Southeast Fairbanks Census Area (1.5%), Valdez-Cordova Census Area (1.3%), Ketchikan Gateway Borough (1.1%) and North Slope Borough (1.0%). Figure 2.3 shows the distribution of persons living in a foreign country five years ago as a percentage of the borough or census area population. The highest proportion of foreign population are found in the Aleutians and Kodiak which have a large number of Asians and Hispanics working in the fish processing industry. Another concentration of immigrants is in Southeast Fairbanks Census Area, where there has recently been a large migration of Ukrainian and

Figure 2.8
Alaska Average Annual Net Migration, 1990-1995

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Russian immigrants to the Delta Junction area.

Boroughs and census areas differ widely in the share of recent migrants to Alaska from other states (interstate migration). Figure 2.4 shows the percentage living in a different state in 1995. Fairbanks North Star Borough and the Aleutians have the highest proportions of recent migrants to Alaska (over 21%). Fairbanks ranks high because such a large proportion of its population is accounted for by the Military and University of Alaska. The Aleutians rank high because of the substantial share of out of state workers in the fish processing industry. Denali Borough, Southeast Fairbanks Census Area and the Municipality of Anchorage also rank high because of military populations and Kodiak Island Borough and Sitka Borough both rank high because of Coast Guard and fishing populations.

The boroughs and census areas which are least likely to have someone migrate to them (Figure 2.5) are in rural Alaska. In Wade Hampton, Bethel and Nome census areas and the Northwest Arctic Borough, over 84% of the population were living in the same borough or census area as they were five years ago.

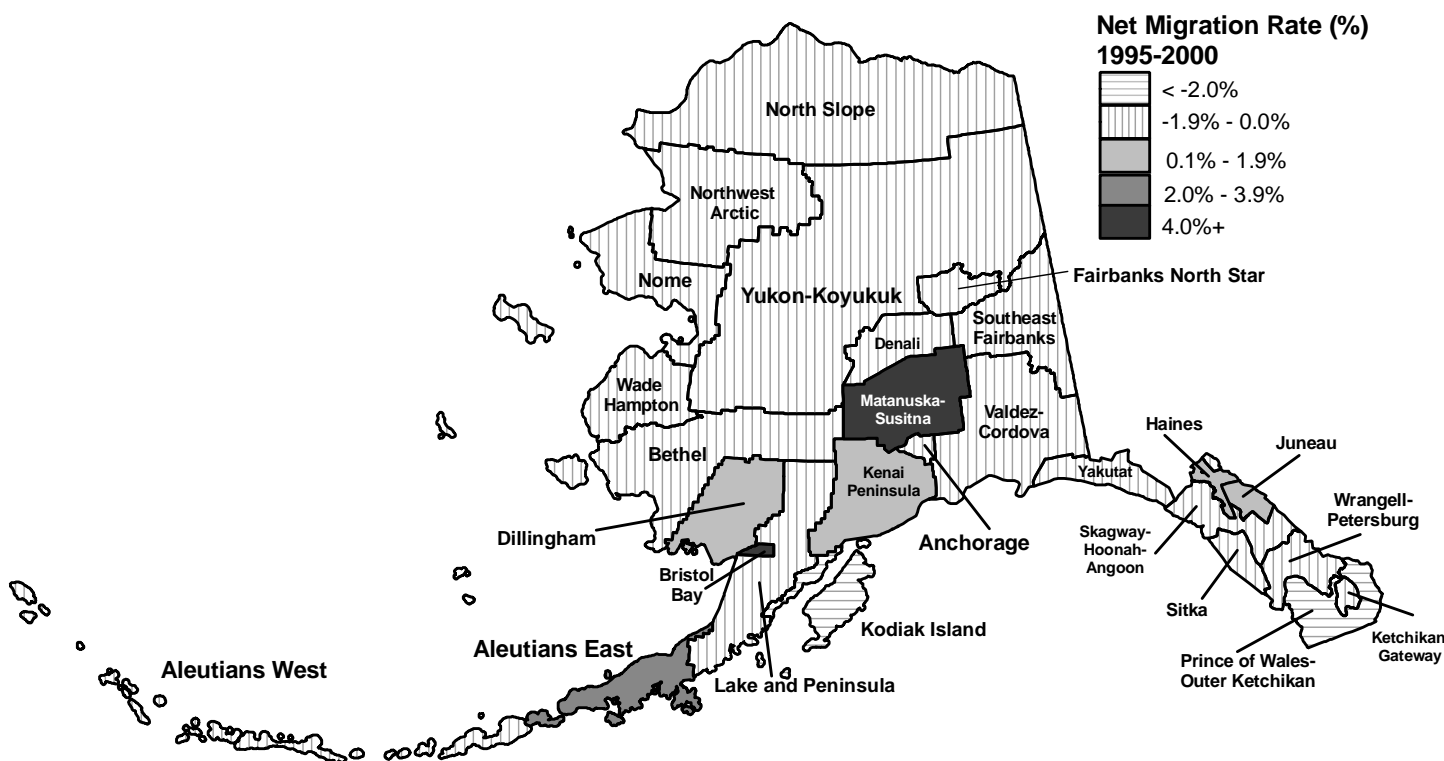

There are three additional sources of migration information. Each has its shortcomings. Each year the IRS produces

migration information based upon the county from which income tax returns are filed. Specific counts are restricted by agreement and small numbers are suppressed. Coverage is limited to those that file tax returns in two consecutive years. A second source is the Alaska Permanent Fund. Coverage for the PFD is limited for the military and is only available for persons who have been in Alaska for a year as of January 1. Further, migration statistics derived from the Permanent Fund do not distinguish in-migrants from births and out-migrants from deaths. Migration is produced by subtracting births and deaths from the non-matches (persons not present in consecutive PFD files). Third, migration can be estimated as a residual net migration. This is computed as the remainder of the change between two time periods minus natural increase (births minus deaths). "Residual net migration" includes migration, but it may include any error from the population estimates. Computing migration with each data set produces somewhat different results. In general, the overall trends are similar.

Reasons for migration

There are many reasons why people migrate. First, the persons most likely to move are young adults between 18 and 30 along with any young children belonging to young families. The movement of persons in their late teens and early 20's is most frequently to seek post secondary educa-

Figure 2.9
Alaska Average Annual Net Migration, 1995-2000

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

tion, enter military service, seek a first job, or accompany family members. Counties containing colleges and military facilities are focal points of this movement nationwide.

Similarly, certain types of employment have distinctive patterns of migration. Persons working in resource industries and fishing flow to and from the resource. Seasonal industries such as fishing attract a highly transient workforce. Fish processing attracts the most non-resident workers and this group of migrants has high gross migration to and from out of state locations. "Military rotation" is a relatively constant migration flow that only changes as the Armed Forces are expanded or reduced in the state. Military migration tends to be limited to ages of 18 to about 40 years of age. Military and dependent rotations may make up as much as 29% of all of the interstate migration flows to and from Alaska and these are concentrated in Fairbanks North Star Borough, the Municipality of Anchorage, Denali Borough and Kodiak Island Borough. A different pattern of migration is found in retirement, with flows going to states and counties popular as retirement locations. This migration has not been large historically because of the smaller numbers of older Alaskans. Retirement migration tends to begin after age 50.

Lastly, flows come and go as employment expands or contracts in communities relative to other communities.

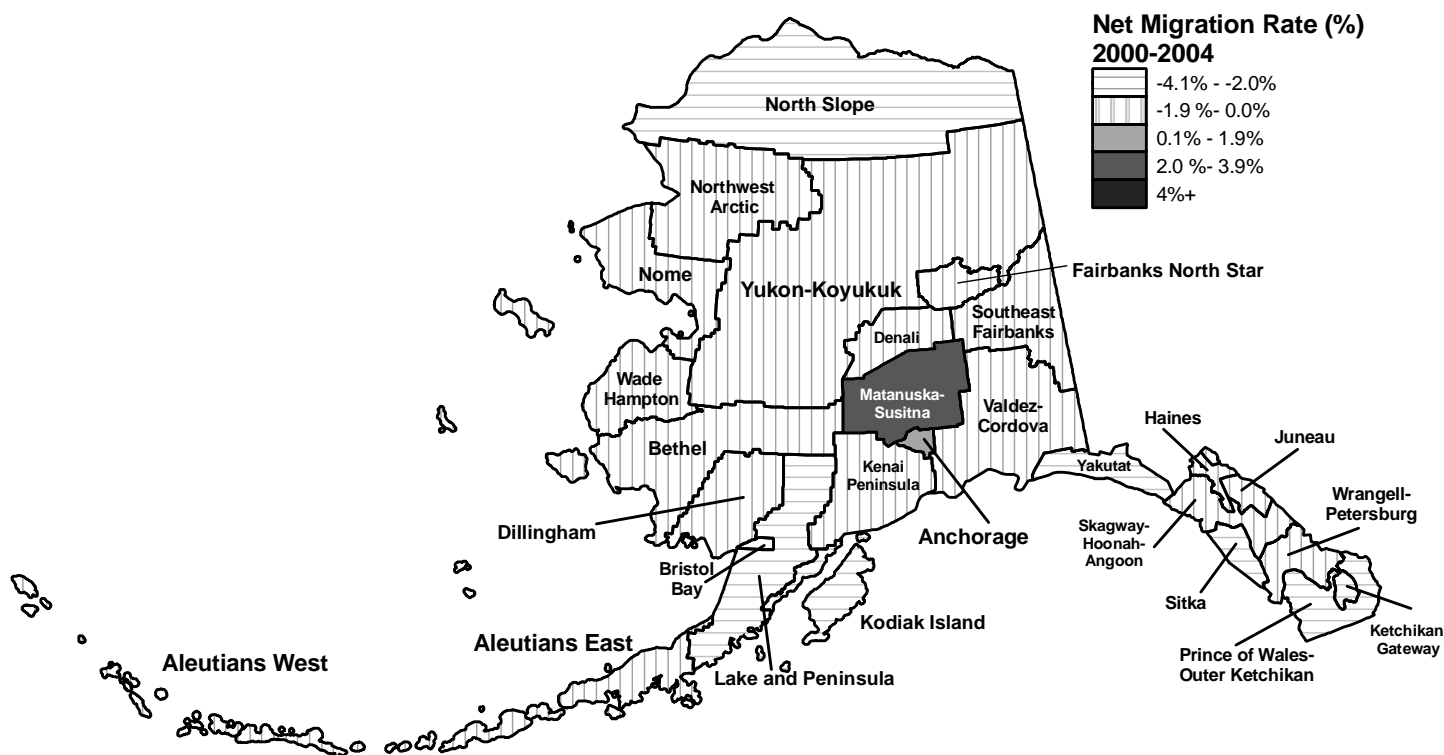

Depending on opportunities elsewhere, the local availability of employment and local environments may or may not compete with employment and communities elsewhere to attract migrants. Similarly, people may remain in a location even when employment opportunities may not exist. These are some of the reasons why population growth or decline may not necessarily match employment growth. Economically driven migration (such as a plant closing) tends to be of relatively short duration and generally disappear as those who have been laid off leave to find other employment. Rarely, the decline of an industry can lead to the death of a community. Alaska has many towns that became "ghost towns", when the work ran out.

Migration trends since 1980

In 1980, 72.4% of Alaska's population lived in the Municipality of Anchorage, Fairbanks North Star Borough, Matanuska-Susitna Borough, Kenai Peninsula Borough, and Juneau Borough. By the 1990s, 74.8% of the population lived in these boroughs and by 2000, they contained 77.0% of the state's population. Most of this change in population distribution is due to migration. Figures 2.6-2.10 show the patterns of average annual net migration rates in five year increments since 1980.

The period from 1980-1985 was unique as a period of substantial spending of oil revenue on State programs and

Figure 2.10
Alaska Average Annual Net Migration, 2000-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

infrastructure. It reflects the largest period of migration to Alaska after the building of the pipeline. Almost every area of the state showed average annual gains through migration and the few who had losses did not have large losses. Matanuska-Susitna Borough, Kenai Peninsula Borough, Kodiak Island Borough, Juneau Borough and Prince of Wales-Outer Ketchikan Census Area had the greatest rates of increase. Sitka, Wrangell-Petersburg, Wade Hampton, the Aleutians and Valdez-Cordova had small losses.

The period from 1985-1990 represents the “bust” which followed the boom of the early eighties. The price of oil plummeted and almost all of Alaska had net migration losses. It is the only time since 1980 that Matanuska-Susitna Borough has had net out-migration. Yukon-Koyukuk, Southeast Fairbanks and Dillingham all had losses of over 2% a year during this period. While Anchorage had a loss of less than 2% per year during this period, its numerical loss was almost 4,000 migrants a year. Of the urban areas, only Fairbanks North Star Borough grew through migration and this was primarily because of military expansion. All remaining gains were in rural Southeast, the Gulf Coast and the Aleutians. The late 1980s were good years for logging. The pollock fishery in Unalaska in Aleutians West was expanding and fish prices were at an all time high which contributed to the migration in Southeast and Valdez-Cordova.

The early 1990s saw a slight recovery. The Matanuska-Susitna Borough was the only borough with annual in-migration of over 2% per year. In addition, Anchorage, Kenai, Kodiak, Juneau, Haines, Ketchikan, Prince of Wales, Denali, Yakutat and the North Slope all had small net gains through migration. However, losses began to appear in Sitka, Wrangell-Petersburg and Skagway-Hoonah-Angoon as timber started to decline. In addition, the beginnings of base closures helped lead to migration losses in Fairbanks North Star, Yukon-Koyukuk, Bristol Bay and Aleutians West. The losses continued in the remainder of rural Alaska and in Valdez-Cordova as a result of the Exxon Valdez oil spill.

The late 1990s showed a further reduction in the areas of growth through migration. The military cutbacks seen in the late 1990-1995 period continued into 1995-2000. There was a strong national economy combined with slow growth in Alaska. Only Matanuska-Susitna Borough and Aleutians East Borough had an annual net gain through migration of more than 2%. Juneau, Haines and Kenai Peninsula Boroughs, and Dillingham Census Area also had slight migration gains. Most of Juneau and Haines’ gains were from declines in other areas of Southeast. The greatest losses were in Wrangell-Petersburg and Prince of Wales-Outer Ketchikan census areas as a result of the further decline in logging. Kodiak had cut-backs in the Coast Guard

Figure 2.11
Alaska Gross Migration Rates, 2000-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

and declines in fishing. Aleutians East gained because of the movement of a substantial amount of fish processing on shore. While outflows were not large, all of rural Alaska continued to have migration losses during this period.

In the 2000-2004 period, only Matanuska-Susitna Borough and the Municipality of Anchorage had net growth through migration. During that period, Matanuska-Susitna Borough gained 8,424 through net migration, representing a gain of 4.3% per year. The decline in suitable land for development in Anchorage continues to fuel the growth of the valley. In 2000-2004 Anchorage gained 4,260 through net migration, amounting to a gain of only 0.4% per year. Every other borough and census area lost population to migration on average during 2000-2004. The greatest losses occurred in the Fairbanks North Star Borough (-2,952), Ketchikan Gateway Borough (-1,382) and Kodiak Island Borough (-1,162). Fairbanks North Star Borough had substantial losses in 2002-2003 due to military movement. Some of this was recovered in the 2003-2004 period. The picture in Southeast Fairbanks is slightly less negative than it was after the closure of Fort Greely. The renewed activity at Fort Greely has been at least partially responsible for the gain of 255 there due to net migration. Declines in oil exploration and production and oil revenues are still causing net migration losses from the North Slope.

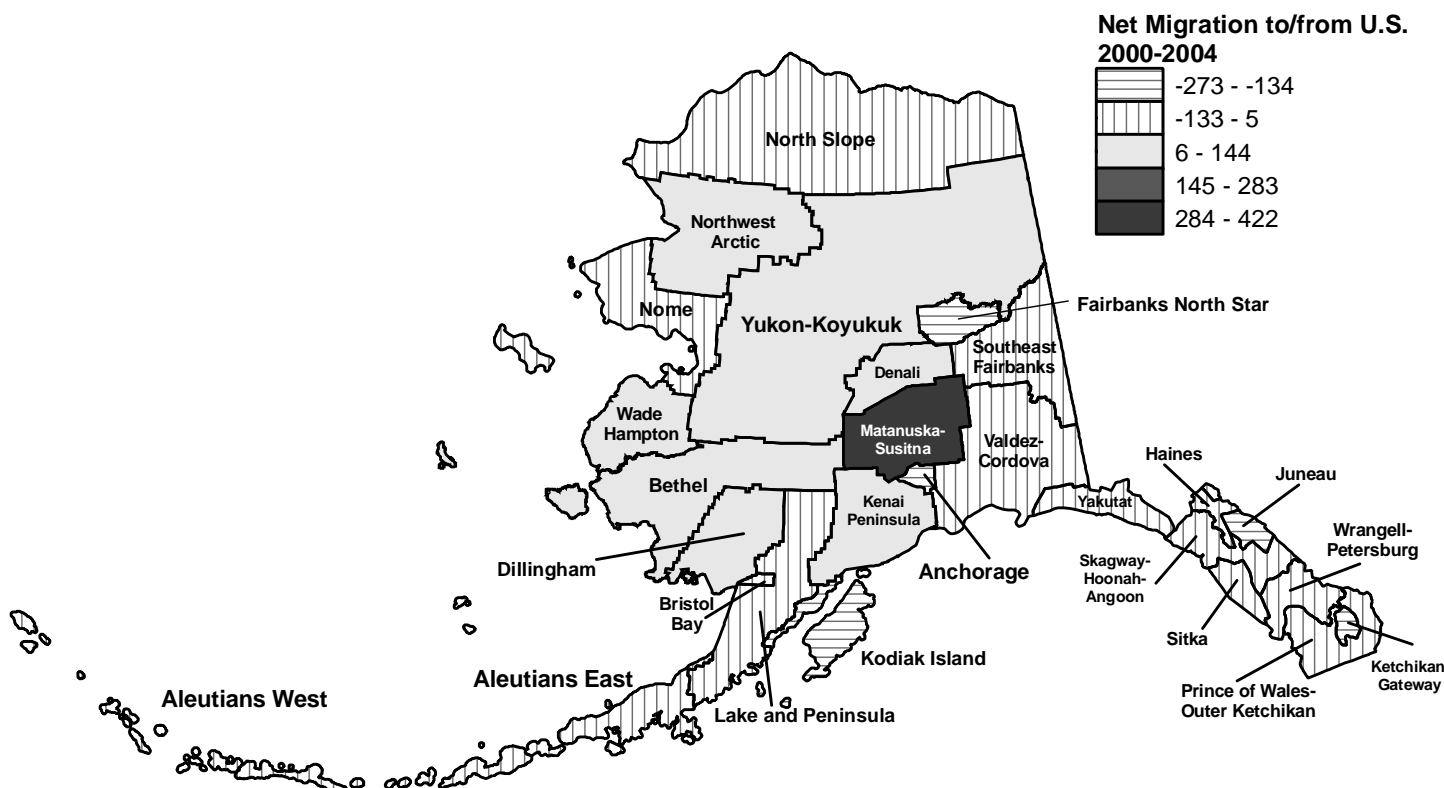

Gross Migration

Gross migration measures the total volume of movement, or turnover, into and out of a borough or census area. Historically, the highest turnover tends to occur in areas of Alaska with large proportions of military or fishing-related populations. Gross migration is frequently of interest to the real estate and moving industries whose business increases with high population turnover. Figure 2.11 shows the percentage of gross migration for 2000-2004 as measured by IRS statistics. The highest gross migration in Alaska was found in Aleutians West Census Area with over 30.2% of the population coming in or leaving. Aleutians East Borough, Lake and Peninsula Borough, Denali Borough, Southeast Fairbanks Census Area, Valdez-Cordova Census Area and Yakutat Borough also had high turnover, with between 25.9% and 30.1% of the population entering or leaving in the last year. The lowest gross migration was found in Wade Hampton, Bethel and Nome census areas where gross migration averaged less than 17.3% of the population.

Interstate Migration

The Aleutian Islands have been high on the list of destinations for persons from outside Alaska. During the 1980s, the migration rate for the Aleutians was 2.5 times the state rate, followed by Southeast Fairbanks Census Area, Bristol

Figure 2.12
Net Migration to and from the U.S., 2000-2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

Bay Borough, Kodiak Island Borough, and Fairbanks North Star Borough, all at 1.4 times the state rate of migration. In contrast, areas such as the North Slope Borough, Nome Census Area, Dillingham Census Area, Lake and Peninsula Borough, Bethel Census Area, Northwest Arctic Borough and Wade Hampton Census Area were the destination of fewer persons migrating to Alaska from outside the state.

Figure 2.12 shows the net migration to and from boroughs and census areas for 2000-2004 from outside Alaska. This slightly longer time period shows that Fairbanks North Star Borough, Anchorage Municipality, Juneau Borough, Ketchikan Gateway Borough and Kodiak Island Borough had the largest net outflows of migrants from Alaska. Matanuska-Susitna Borough had the largest net gain from out of state, while Coastal and Southeast Alaska boroughs and census areas that had net out-migration lost population to out of state destinations.

Intrastate Migration

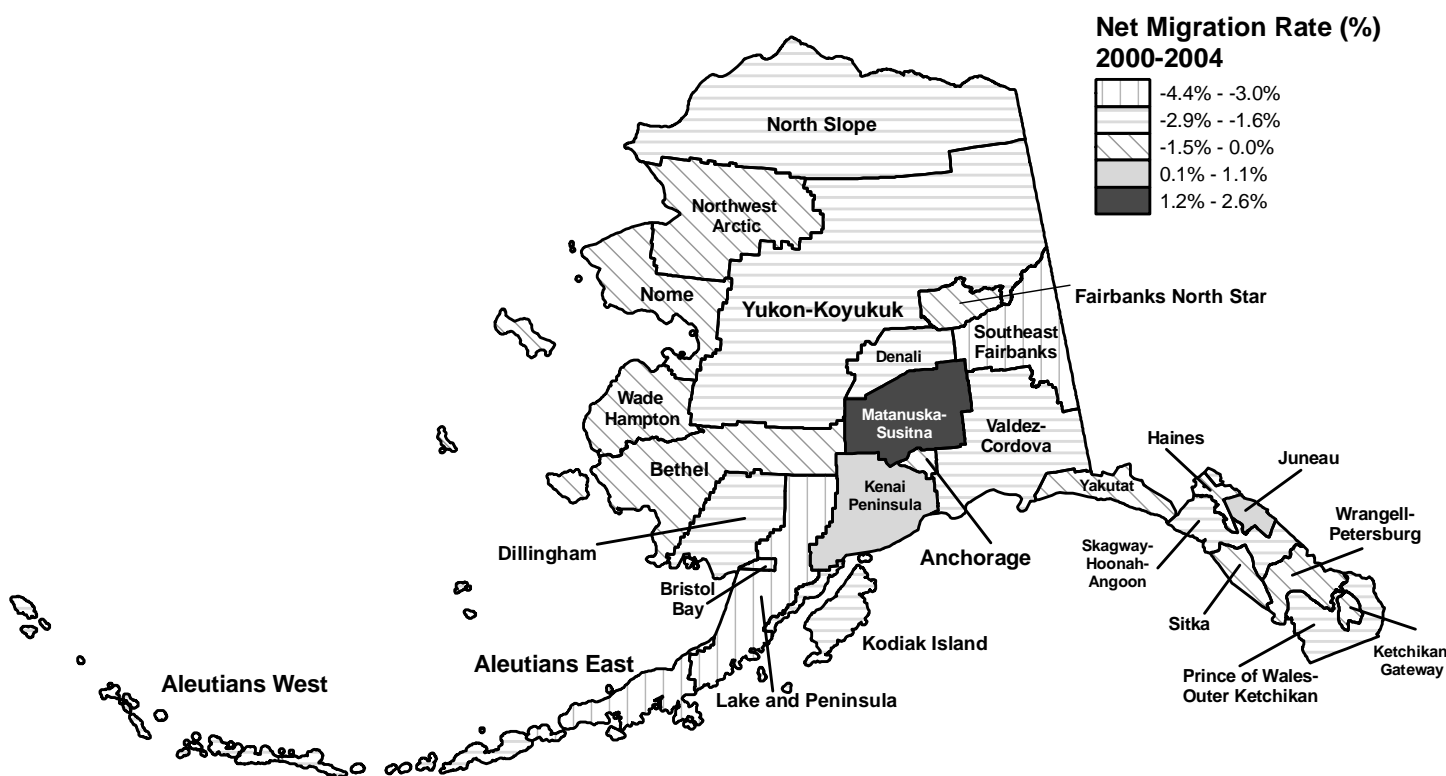

A very different pattern emerges when one focuses on in-state migration. The Mat-Su Valley has shown exceptional growth predominately because of its "suburban" character. It is a place where one can live a relatively rural Alaskan lifestyle and still retain the advantages of the big city. The movement of persons from Anchorage to "the Valley" is the

largest single net migration flow in Alaska usually amounting to about 2-3 thousand persons a year since 2000.

As shown in Figure 2.13, only three areas, Matanuska-Susitna Borough, Juneau Borough and Kenai Peninsula Borough gained population from in-state migration over 2000 and 2004. All other areas had net out-migration or zero net migration to in-state destinations. In all, over 5,100 or 3.6% of the population of rural Alaska moved annually to the most urban areas of the state between 2000 and 2004, and about 3,300 returned from the most urban places. The largest boroughs gained about 1,820 persons or about 1.3% of the population from rural Alaska each year. The destinations of the migrants were as follows: the Municipality of Anchorage (47.7%), Fairbanks North Star Borough (23.1%), Juneau Borough (10.8%), Matanuska-Susitna Borough (11.0%) and Kenai Peninsula Borough (7.4%).

While Anchorage gained migrants from virtually every area of the state, it lost over 80% of its gains to Matanuska-Susitna Borough. Mat-Su gained some migrants from every borough and census area. Fairbanks North Star Borough gained from the interior and northern regions. Over 82% of its gains were from Yukon-Koyukuk Census Area, Southeast Fairbanks Census Area, North Slope Borough, North-

Figure 2.13
Net Migration within Alaska, 2000 to 2004

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

west Arctic Borough, Denali Borough and Nome Census Area. Fairbanks North Star Borough, however, lost more to Anchorage and Mat-Su than it gained from rural Alaska. Some 87% of Juneau's gains were from Southeast Alaska. Over half of those gains, however, were lost to Anchorage and Mat-Su. Kenai Peninsula gained from most areas of the state, predominately from Kodiak Island and Anchorage, coastal areas and Southeast. It in turn lost about 20% of its gain to Matanuska-Susitna Borough.

Another way of looking at the relative importance of migration from in-state compared to out-of-state is from a ratio of in-state to interstate migration for in-migrants to and out-migrants from Alaska boroughs and census areas. Migrants into Lake and Peninsula Borough, Yukon-Koyukuk Census Area, Wade Hampton Census Area and Dillingham Census Area are more than 70% from other areas of Alaska, while migrants into Fairbanks North Star Borough, the Municipality of Anchorage, Ketchikan Gateway Borough, Kodiak Island Borough, and Juneau Borough, are more than 67% from out of state. Similarly, for out-migrants, migration from rural Alaska is predominately to Alaska destinations, as opposed to migrants from urban areas, who are more likely to leave the state.

Population Composition

As with the total population, borough and census area population estimates of age, race and sex for the 1990s will be consistent with the MARS (Modified Age, Race, Sex) estimates for 2000. MARS estimates eliminate the Other Races category and adjust for errors in age reporting from the census.

Race Composition

Racial composition of the state's boroughs and census areas (Tables 2.4 to 2.6) tends to be divided into Native versus non-Native areas.

The outer coastal area extending from the northwest to the southwest part of the state remains predominately Native American. Two boroughs (Lake and Peninsula and Northwest Arctic) and five census areas (Bethel, Dillingham, Nome, Wade Hampton and Yukon-Koyukuk) were more than 69% percent Native American in 2004.

On the other hand, the coastal and "railbelt" areas of the state are largely non-Native. Eleven boroughs (Denali, Fairbanks North Star, Haines, Juneau, Sitka, Kodiak Island, Kenai Peninsula, Ketchikan Gateway, Yakutat, Matanuska-Susitna and the Municipality of Anchorage) and three census areas (Southeast Fairbanks, Aleutians West and Valdez-Cordova) were more than 69 percent non-Native in 2004. In 2000, Wrangell-Petersburg Census Area was also more than 69% non-Native, while Yakutat had a larger Native American population (39.7%).

The Municipality of Anchorage had the largest number of Native Americans Alone and Alone or in Combination

(between 23,415-30,823 respectively) of any borough or census area in 2004, but the proportion was just 8.4%-10.4% of the borough's total population, up slightly from 2000 (7.4%-9.9%). Anchorage has the largest number of Native Americans of any city in Alaska and ranks 16th for county Native population in the U.S. The second largest number of Native Americans was in the Bethel Census Area (13,686-14,453). Other significant Native populations were found along the western coast and northern part of the state. The six largest numerical increases between 2000 and 2004 in the number of Natives occurred in the Municipality of Anchorage (1,682-3,709), Matanuska-Susitna Borough (925-1,631), Fairbanks North Star Borough (766-1,400), Bethel Census Area (505-768), Kenai Peninsula Borough (380-685) and Wade Hampton Census Area (264-329).

In 2004, 47,046-49,977 (39.3%-45.3%) Native Americans lived in areas of the state where Natives made up more than half of the population. The rate in 2000 was slightly higher at 47.6%, but significantly lower than the 54.5% rate in 1990. Because of out-migration from rural areas and a faster than average rate of natural increase, the proportion of Native Americans living in boroughs with less than ten percent Native American population grew to 37.0%-41.9% in 2004, up from 30.1% in 1990 and 22.4% in 1980. Boroughs with less than ten percent Native population Alone in 2004 included the Municipality of Anchorage (8.4%-10.4%), Fairbanks North Star (7.7%-10.7%), Kenai Peninsula (8.1%-10.8%), Matanuska-Susitna (6.0%-9.1%) and Denali (6.1%-10.6%).

Native American population has shown some geographic redistribution between 1990 and 2004. Over the last 14 years an increase in the share of the total Native population has occurred primarily in four boroughs or census areas. The largest shift in the distribution of the Native American population has occurred in the Municipality of Anchorage. In 1990, 17.1% of the Native population lived in Anchorage. By 2004, that proportion had increased to 22.5%-24.3%. Similarly the Native proportion of the Matanuska-Susitna Borough increased from 1.5% in 1990 to 4.1%-5.3% of the state's Native population in 2004. Kenai Peninsula Borough's share increased from 3.4% to 4.0%-4.5%. Fairbanks North Star Borough increased slightly from 6.2% in 1990 to 6.3%-7.6% in 2004. Denali Borough and Juneau Borough remained almost constant. Proportionally, every other area of the state had decreases in their share of Natives in spite of higher fertility.

The share of Native American population decreased in the remaining boroughs and census areas. The areas which showed the greatest percentage point loss in share between 1990 and 2004 were: Yukon-Koyukuk Census Area (-1.2% to -1.8%), Prince of Wales-Outer Ketchikan Census Area (-0.7%), Wrangell-Petersburg Census Area (-0.5% to -0.7%), Kodiak Island Borough (-0.6%), Skagway-Hoonah-Angoon Census Area (-0.6% to -0.7%), Sitka Borough (-0.3% to -0.5%) and Aleutians East and Aleutians West (-0.4% to

Footnotes:

Income in thousands of dollars.

(N) indicates that income figures were not available for these places in this year.

Percentages will generally not add to 100%, since some areas are included twice.

Income data source: U.S. Department of Commerce, Bureau of Economic Analysis.

The income data in this table do not match data in Table 2.7 in the 1998 and earlier Population Overviews, because the BEA has changed its income definitions.

One example of this is that government pensions have been included in personal income to match.

All income data are in current dollars; that is, the amounts have not been adjusted for inflation.

/1 Denali Borough was included in the Yukon-Koyukuk Census Area until 1991. For continuity, this line shows the old definition, including Denali Borough.

/2 Denali Borough was incorporated 7 December 1990

/3 This line shows the new definition of the Yukon-Koyukuk Census Area, excluding the Denali Borough.

/4 Yakutat was included in this Census Area until 1992. For continuity, this line shows the old definition, including Yakutat.

/5 This line shows the new definition of the Skagway-Hoonah-Angoon Census Area, excluding Yakutat.

/6 Yakutat Borough was incorporated 22 September 1992.

/7 Lake and Peninsula Borough was incorporated 24 April 1989. Income data is not available for 1990 for this area.

Footnotes:

Income in thousands of dollars.

Per capita estimates are produced by dividing BEA Total Personal Income data by the Alaska Department of Labor estimated population for the year.

These estimates may differ slightly from the BEA estimates, which rely on the Census Bureau population estimates.

(N) indicates that income figures were not available for these places in this year.

Percentages will generally not add to 100%, since some areas are included twice.

Income data source: U.S. Department of Commerce, Bureau of Economic Analysis.

The income data in this table do not match data in Table 2.7 in the 1998 and earlier Population Overviews, because the BEA has changed its income definitions.

One example of this is that government pensions have been included in personal income to match the handling of private pensions.

These revisions have increased personal income in Alaska by 5% to 7%.

All income data are in current dollars; that is, the amounts have not been adjusted for inflation.

/1 Denali Borough was included in the Yukon-Koyukuk Census Area until 1991. For continuity, this line shows the old definition, including Denali Borough.

/2 Denali Borough was incorporated 7 December 1990

/3 This line shows the new definition of the Yukon-Koyukuk Census Area, excluding the Denali Borough.

/4 Yakutat was included in this Census Area until 1992. For continuity, this line shows the old definition, including Yakutat.

/5 This line shows the new definition of the Skagway-Hoonah-Angoon Census Area, excluding Yakutat.

/6 Yakutat Borough was incorporated 22 September 1992.

/7 Lake and Peninsula Borough was incorporated 24 April 1989. Income data is not available for 1990 for this area.

-0.5%). Internal distribution may not account for all of the changing geographic share of Native American's in Alaska. While evidence is indirect, the migration of Natives out of Alaska (particularly from Southeast) may also have helped contribute to the redistribution.

Age and Male/Female

Table 2.7 shows 2004 estimates by male/female and five-year age groups for the state, economic regions, and census areas. Included are median age, senior citizens (65+), working (16+) and voting (18+) age populations. Comparisons are made in all tables between 2004 estimates and 2000 census data.

The male/female ratio relates to the number of males per 100 females. In 2004, statewide there were 105.7 males for every 100 females. The boroughs and census areas with the highest male/female ratios and the chief economic cause for each ratio are as follows: Aleutians East Borough (191.5—fishing), Aleutians West Census Area (182.4—fishing and seafood processing), Prince of Wales-Outer Ketchikan Census Area (121.7—fishing and logging), Bristol Bay Borough (121.0—fishing and seafood processing), Denali Borough (119.3—military and mining), Yukon-Koyuk Census Area (116.8—rural interior), Yakutat Borough (113.2—fishing and logging), Skagway-Hoonah-Angoon (112.1—fishing and logging), Southeast Fairbanks (110.5—military) and Wrangell-Petersburg (110.0—fishing). Military populations and resource-driven industries generally have created the highest male/female ratios.

The boroughs and census areas with the lowest average male/female ratios are as follows: Juneau Borough (100.7), Sitka Borough (101.3), Municipality of Anchorage (102.6), Ketchikan- Gateway Borough (104.1), Haines Borough (104.1), Kenai Peninsula Borough (106.2), Fairbanks North Star Borough (106.3), Northwest Arctic Borough (106.3), and Matanuska-Susitna Borough (107.0). In general, urban areas of the state and areas with older populations tend to have lower male/female ratios than rural areas.

Median Age

The median age in Alaska was estimated at 33.3 years as of July 1, 2004. Alaska's population is ageing, as is the population throughout the U.S. In 2000, the median age of Alaska's population was 32.4 and in 1990 it was 29.3 years. The U.S. median age in 2000 was 35.3 and 36.0 in 2004.

The areas of Alaska with the oldest population in 2004 were found in Haines Borough (43.9 years of age), Skagway-Hoonah-Angoon Census Area (41.2), Wrangell-Petersburg Census Area (40.1), Denali Borough (39.9), Ketchikan Gateway Borough (38.4), Valdez-Cordova Census Area (38.1), Aleutians West Census Area (37.9), Kenai Peninsula Borough (38.1), Sitka Borough (37.6), Bristol Bay Borough (39.8) Juneau Borough (37.4), Prince of Wales-Outer Ketchikan Census Area (38.1), Yakutat Census Area (37.0), Aleutians East Borough (36.3), Southeast Fairbanks Census

Area (35.6) and Matanuska-Susitna Borough (34.7).

The youngest median ages in 2004 were found in the Northern and Southwest regions of the state. These areas included Wade Hampton Census Area (19.3 years of age), Northwest Arctic Borough (23.4), Bethel Census Area (24.4), Nome Census Area (26.6), and North Slope Borough (26.9). A young median age generally indicates a higher than average fertility rate. This is supported by the proportion of population zero to four years of age in these areas being significantly above the statewide average.

Overall, the state's median age increased 3.1 years between 1990 and 2000, indicating Alaska's population is indeed aging. The heavy out-migration of young adults associated with military realignments and the closing of logging camps and the slowdown in commercial fishing are a few examples of economic conditions that speed up the aging of the population apart from the demographic components of births and deaths.

The largest increases in median age between 2000 and 2004 occurred in Bristol Bay Borough (3.8 years), Skagway-Hoonah-Angoon Census Area (3.4 years), Prince of Wales-Outer Ketchikan Census Area (3.4 years), Haines Borough (3.2 years), Wrangell-Petersburg Census Area (2.9 years), Ketchikan Gateway Borough (2.4 years), Sitka Borough (2.4 years), Denali Borough (2.3 years), Lake and Peninsula Borough (2.2 years), Juneau (2.1 years), Yukon-Koyukuk Census Area (2.0 years), and Valdez-Cordova Census Area (2.0 years). Rapid increases in median age occur when there is an out migration of younger adults, declining fertility, or both. However, not all areas aged during this time. High fertility rates and overall net out-migration of older adult or in-migration of younger adult age groups can work to lower the average age of population. These conditions existed in the Nome Census Area (-1.0 years), Bethel Census Area (-1.0 years), Aleutians East Borough (-0.7 years), Wade Hampton Census Area (-0.7 years), Northwest Arctic Borough (-0.5 years), Yakutat Borough (-0.2 years), North Slope Borough (-0.2 years), Dillingham (-0.1 years), and the Municipality of Anchorage (-0.1 years), where the median age declined between 2000-2004.

Elders

The percentage of persons 65 years and older was 6.3% in 2004. There has been a steady increase in the older population from 2.9% in 1980, 4.0% in 1990, and 5.7% in 2000. Although Alaska still has the smallest percentage of persons over 65, it is following the nationwide trend toward an increasing share of older persons.

Some boroughs and census areas within the state had a larger concentration of older Alaskans than others. The Southeast region of the state had the greatest proportion of elders. Haines Borough led with 12.7%, followed by Wrangell-Petersburg Census Area with 10.9%. Next came

Sitka Borough at 10.1% and Ketchikan Gateway Borough with 9.1% of their population estimated at 65 years and older. Other Southeast areas with a higher than average percentage of older residents were Skagway-Hoonah-Angeles Census Area (9.0%), Prince of Wales-Outer Ketchikan Census Area (7.9%), Yakutat Borough (7.4%) and Juneau Borough (7.2%). Some areas outside of Southeast with increasingly large shares of seniors are Kenai Peninsula Borough (8.4%), Southeast Fairbanks Census Area (7.9%), Yukon-Koyukuk Census Area (8.3%), Southeast Fairbanks Census Area (8.3%), and Lake and Peninsula Borough (7.1%).

The Aleutians West Census Area, with its transient population, had the lowest proportion of persons 65 years and older at 2.4%. Areas that followed were: Aleutians East Borough at 2.9%, Denali Borough at 4.6%, and North Slope Borough at 5.1%.

In 2004, eighty-four percent of elder Alaskans 65 years of age or older lived within the following areas: Municipality of Anchorage (16,244 elder Alaskans), Matanuska-Susitna Borough (4,630), Fairbanks North Star Borough (4,531), Kenai Peninsula Borough (4,288), Juneau Borough (2,220), Ketchikan Gateway Borough (1,186), Bethel Census Area (904) and Sitka Borough (893). Most seniors either choose or need to live in the more urban areas of the state where medical care and other necessities are more accessible.

Income in Alaska

The most recent statistics on income for Alaska are shown in Tables 2.8 and 2.9. The Department of Commerce, Bureau of Economic Analysis (BEA) provides personal income information both at the statewide level and by borough and census area. The most recent year for which statewide earnings are available is 2003 for sub-state areas. Per capita income is derived using the BEA's earnings information provided and the 1990-2003 population series in this publication.

Different federal agencies have differing measures of income. The two most used are total personal income, which is produced by the BEA, and money income, used by the Census Bureau. A third, less used, measure of income is that of taxable income used by the Internal Revenue Service. Each of these measures is slightly different from the other, and they do not lend themselves well to comparison.

Total personal income data are estimated quarterly and county level data are released annually. Total personal income is also divided by an estimate of population to produce per capita income estimates. The major components of total personal income and their approximate share in 2003 were: wages and salaries (58%); supplements to salaries (15%); proprietors' income (9%); dividends, interest, and rent (12%) and transfer payments (13%). About 95 percent of the wage and salary component (52% of all total personal income) is derived from employment

covered by the State Employment Security system (QCEW). The QCEW component of wage and salary income is what is normally published in the Alaska Department of Labor & Workforce Development's Employment and Earnings Report. The QCEW wages are reported by place of work. Total personal income is calculated for place of residence of the worker. This means that, for wage and salary data, BEA must make an adjustment in income for the place of work to place of residence. The user of such data should be aware that in some cases the adjustments may not be perfect.

Statistics on money income are also collected by the Census Bureau at the time of the decennial census and are used in many Census Bureau surveys to tabulate the distribution of income and compute median household and family income statistics. They also allow computation of the number of persons in poverty. Census money income, unlike total personal income, does not include estimates of imputed income, lump sum payments, Medicaid, Medicare and food stamps, and employer contributions to private welfare and pension plans. Total personal income excludes, and money income includes, personal contributions for social insurance, income from private pensions and annuities and child support.

In addition, census per capita income refers to income in 1999 divided by the population as of April 2000. Per capita total personal income refers to income for 1999 divided by the estimated population in July of 1999. In general, per capita income should be used with caution. Unusual conditions such as an exceptionally good fishing year, natural disaster or the presence of a large institutional population such as a college or prison may distort per capita income figures.

Total personal income for Alaska in 2003 was estimated at \$21.5 billion and has increased by \$8.9 billion since 1990. Alaska's total personal income has increased at an average annual rate of 4.0% since 1990 compared to 4.7% for the United States as a whole. Between 1990 and 2003, the areas where the share of total personal income increased the greatest were the Matanuska-Susitna Borough (3.2%) and the Municipality of Anchorage (0.9%). These two areas increased the most in population as well as income during this period. Southeast had the greatest decline in its share of total personal income (-2.4%).

Because of the loss of Adak's air station, Aleutians West Census Area experienced a 2.8% average annual loss in total personal income between 1990 and 2003. Regions of Alaska that experienced above average growth in total personal income during the 1990-2003 period included the Anchorage/Matanuska-Susitna Region (4.6%), Northern Region (4.4%), Interior Region (4.0%), and the Gulf Coast Region (3.4%). The slowest growth in personal income occurred in the Southwest Region (2.7%) and in the Southeast Region (2.6%).

Growth in Total Personal Income adjusted for population is shown in Table 2.9. Per capita income in Alaska in 2003 was \$32,604. Income per person has increased \$9,665, or about 3.5%, annually between 1990 and 2003. Nationally, the U.S. per capita income in 2003 was \$31,487. U.S. per capita income has increased by \$12,010, or about 3.6%, annually since 1990. From first place in per capita income in the early 1980s, Alaska had fallen to 7th place by 1990 and 15th place by 2000. Alaska's per capita income growth during the 1990's was 3.19% per year. Alaska's average annual rate of growth in per capita income between 2002 and 2003 was 34th among the states at 2.1% per year, slightly below the national average of 2.2%.

Per capita income can fluctuate either because of change in income, population, or both. Statewide between 2000 and 2003 per capita income rose 3.3% annually. Per capita income rose in all regions of the state as well. The highest average annual growth was in the Northern Region (4.5%), Southwest (4.3%), Interior (4.2%) and Anchorage/Matanuska-Susitna (3.2%). Growth was the lowest in Southeast (2.6%) and the Gulf Coast (1.5%).

Chapter 3

Special Populations and Areas

Introduction

As with past editions of *Alaska Population Overview*, estimates are presented for different special populations or special geographic areas. These include the armed forces population, the population of legislative districts, school districts, Alaska Native Regional Corporations and areas of Canada adjoining Alaska. Persons interested in special populations or geographic areas other than those presented here should contact the State Demographer (greg_williams@labor.state.ak.us).

Armed Forces

Historically, the armed forces have been an important part of Alaska's population. The military buildup in Alaska with World War II and Korea was responsible for opening Alaska and paving the way for much of its growth since statehood. In 1960, some 32,680 persons 16 years old and over worked in the military and were stationed in the state. Fully 33% of the total labor force at that time was military. As Alaska's economy matured and diversified, the proportion of military has fallen. By 1990, active duty military assigned to the state numbered 23,132 and represented about 7.3% of the state's total labor force. By 2002, the number of active duty military had fallen to 17,696, about 5.3% of the workforce. In 2004, the number of active duty military personnel has climbed to 20,172, which brings it up to 3.1% of the population. Despite the decrease in military presence, the armed forces remain one of the largest employers, providing nearly as many jobs in Alaska as the top-ten private sector employers in 2004 combined (20,392). The number of military stationed in the state exceeds the number employed by other large public sector employers, including the federal government (17,177), State of Alaska (16,987), and the University of Alaska (7,072).

The number of full-time military, plus their dependents stationed in Alaska in 2004 totaled 46,332. (Military and dependent populations for the state are shown by borough and census area in Tables 3.1 and 3.2.) Overall, the number of active duty military and dependents declined 16% since 1990. The closure of Adak Naval Air Station (NAS), King Salmon Air Force Station (AFS), Galena AFS, and Eareckson AFS contributed to these declines. Additionally, personnel restructuring, some of which involved cuts, occurred at Air Force and Army bases in Anchorage and Fairbanks and at Fort Greely, near Delta Junction. Since 2002, the renewed military presence at Fort Greely and a gradual buildup of forces elsewhere have reversed the downward trend, at least temporarily.

In 2004, the Air Force represented the largest military presence in the state with 52% of the active duty members and

dependents. This represents a small decline from the 1990 level, and is essentially unchanged from 2002. Nearly all members and dependents were assigned to either Elmendorf AFB in Anchorage or Eielson AFB in Fairbanks.

The second largest military contingent was the Army and their dependents, with approximately 36% of the active duty military and dependents. This represents a small decline from 1990, but is up 2% from 2002. Army personnel and their families were assigned to either Fort Wainwright in Fairbanks or Fort Richardson in Anchorage.

Another significant branch of the armed services in the state is the Coast Guard, with approximately 11% of the active duty members and dependents. The Coast Guard presence increased significantly between 1990 and 2002, and has fallen slightly since then.

The Navy no longer maintains a significant presence here. Naval assignments all but disappeared in Alaska with the closure of Adak NAS in 1997. At its peak in 1989, active duty personnel and dependents stationed at this remote base in the Aleutians West Census Area numbered 4,688. Today, the Navy has less than a score of active duty personnel in Alaska, primarily assigned to Alaska Command in Anchorage.

As remote military installations have closed or been downsized, military installations closer to urban areas in the state have increased their proportion of personnel. In 2004, for example, the Municipality of Anchorage and the Fairbanks North Star Borough were home to 89% of all military and dependents assigned in Alaska, up from 81% in 1990 and up 2% from 2002. The next round of base realignments may reduce the military at Eielson AFB, but these may be offset by increases in the Army's light infantry troops to Alaska and the continued expansion of the missile defense system at Ft. Greely.

When the size of military and dependent populations is considered relative to local, non-military populations, some bases play a more significant role in local areas than others. The influence of Eielson AFB and Fort Wainwright in Fairbanks North Star Borough is significant. Military and their families accounted for almost 20% of the residents in the borough in 2004, down slightly from 2002. Fort Greely's military population accounted for 20% of the population of Southeast Fairbanks Census Area in 1990, but had a much greater impact in the Delta Junction area where it was located. After closing and reopening as part of missile defense, Fort Greely has made a small comeback, and the base population is now back up to 4.9% of the population of the Southeast Fairbanks Census Area.

Legislative Districts

There are 40 House districts and 20 Senate districts in the state. The current House and Senate areas of the Alaska State Legislature were established by the redistricting plan of 2002. The 2000 census counts are shown in Table 3.4 for each district as well as the 2004 estimates of total population, number of children, voting age population and older population. Voter registration information for 2004 and the results of the 2004 statewide general election are included in the table as provided by the Alaska Division of Elections. The number of registered voters may be higher than the voting age population in areas with high population turnover, due to the length of time it takes to clear voter registration rolls.

House Districts in 2004 averaged 16,386 people per district. The smallest House Districts and their constituent populations were: HD-5 Rep. Thomas (13,840), HD-1 Rep. Elkins (13,901), HD-36 Rep. LeDoux (14,359), HD-37 Rep. Moses (14,519), HD-2 Rep. Wilson (14,559), HD-6 Rep. Salmon (14,684), HD-40 Rep. Joule (14,987), and HD-3 Rep. Kerttula (15,411). The largest House Districts and their constituent populations are: HD-13 Rep. Gatto (19,176), HD-15 Rep. Neuman (19,109), HD-14 Rep. Kohring (19,029), HD-16 Rep. Stoltze (18,102), HD-23 Rep. Gara (16,995), HD-25 Rep. Croft (16,930), HD-35 Rep. Seaton (16,909), and HD-20 Rep. Gruenberg (16,907).

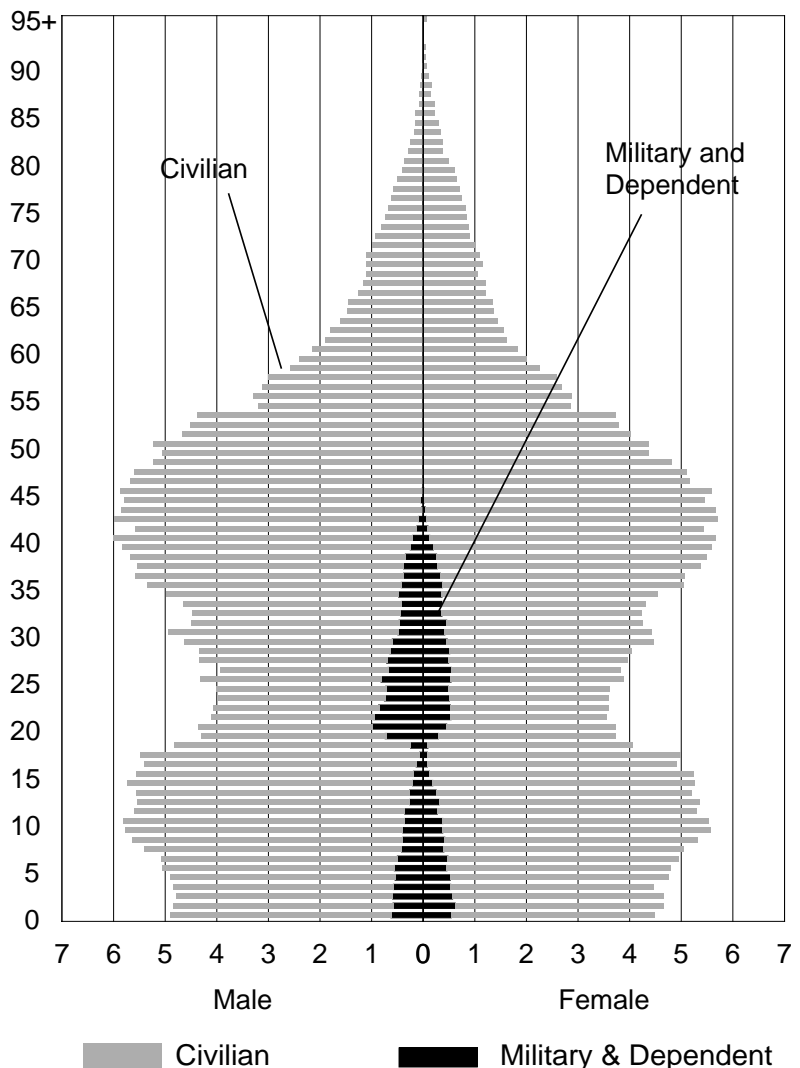

The House Districts with the largest number of children under five years of age were: HD-18 Rep. Dahlstrom (2,344), HD-38 Rep. Kapsner (1,988), HD-20 Rep. Gruenberg (1,943), HD-39 Rep. Foster (1,927), HD-10 Rep. Ramras (1,890) and HD-40 Rep. Joule (1,672). The House Districts with the largest number of school age children are: HD-39 Rep. Foster (4,696), HD-13 Rep. Gatto (4,572), HD-14 Rep. Kohring (4,463), HD-38 Rep. Kapsner (4,463), HD-40 Rep. Joule (4,270), and HD-17 Rep. Kott (4,238). The House Districts with the highest number of elders 65 years of age and older, are: HD-23 Rep. Gara (2,204), HD-9 Rep. Holm (1,636), HD-2 Rep. Wilson (1,540), HD-35 Rep. Seaton (1,1501), HD-3 Rep. Kerttula (1,460), HD-26 Rep. Berkowitz (1,453) and HD-34 Rep. Chenault (1,390).

Average Senate District size is 32,772 people. The smallest Senate Districts are: SD-A

Sen. Stedman (28,460), SD-C Sen. Kookesh (28,524), SD-S Sen. Hoffman (30,233), and SD-T Sen. Olson (30,506). The largest Senate Districts are: SD-G Sen. Green (38,205), SD-L Sen. Huggins (37,211), SD-M Sen. French (33,828), and SD-J Sen. Guess (33,812).

The Senate Districts with the largest number of children under five years of age were: SD-T Sen. Olson (3,599), SD-I Sen. Dyson (3,570), SD-J Sen. Guess (3,377) and SD-E Sen. Wilken (3,290). The Senate Districts with the largest number of school age children are: SD-G Sen. Green (9,121), SD-T Sen. Olson (8,966), and SD-H Sen. Huggins (8,347), and SD-I Sen. Dyson (7,665). The Senate Districts with the largest number of elders 65 years of age and older, are: SD-L Sen.

Ellis (3,527), SD-M Sen. French (2,822), SD-A Sen. Stedman (2,791) and SD-Q Sen. Wagoner (2,742).

School Districts

Population estimates for Alaska school districts are generally used for planning purposes. Effective allocation of resources is possible only when the magnitude of population is known. Table 3.5 shows the population for Alaska urban and rural school districts for 1990 and 2000 through 2004. Change in each district's population for the periods 1990-2000 and 2000-2004 are shown, along with annual changes for those periods. Each district's share of the state's population in 2004 is also shown.

It is also important for districts to know the level of education of the residents in their district, since this may affect the educational needs of children, the degree of home support for schooling and the potential demand for continuing

education. Therefore, Table 3.5 also provides information on the percent of high school and college graduates over 25 years of age in 2000 and 1990.

In 2000, 88.3% of Alaska's population 25 years old and over had completed high school. While not completely comparable, the 2004 American Community Survey shows that the percent of Alaska's population 25 years old and over who had completed high school was 91.4%. This placed Alaska among the top states in high school completion. The differences between the top 3 states (in order: Alaska, Minnesota, Wyoming,) are not significant at 90% confidence, which indicates that the top three states are equivalent. This means that we must expect that Alaska will occasionally be jostled out of the top spot.

In 1990, 23.0% of all Alaskans 25 years and over were college graduates. In 2000, 24.7% of all Alaskans 25 years old

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

and over had completed a Bachelor's degree or better. Alaska ranked 21st in the nation in 2000. Again, while not completely comparable data, the 2004 American Community Survey shows that the proportion of persons 25 years and over who had completed a Bachelor's degree or better was 27.2%. In the ACS comparison, Alaska ranked 22nd in the proportion of persons that had completed a Bachelor's degree. This may not be significantly different from the 2000 ranking. Looking at Pacific Northwest and West Coast states, we see that Alaska currently ranks lower than Washington, California, Oregon and Utah. As with the high school statistics, Alaska is statistically indistinguishable from a group of 10 other states, at the 90% confidence level. The states we are statistically equivalent to are: Delaware, Oregon, Utah, Maine, Montana, Kansas, Rhode Island, Georgia, Wyoming and Nebraska.

A change in the educational level for districts over a period of time usually reflects the educational level of the migrat-

ing population. A difference may reflect changes in the occupational base of communities. Change in the age structure also contributes to changes in education. If younger residents replace older residents in a community, it will usually contribute to a rise in educational level. If younger residents leave a community, the community ages, and the overall level of education tends to stagnate or decline.

Of the 54 Alaska school districts in 2004, the Anchorage school district had the largest population, with 277,498 people. The district was home to 42.3% of the state's total population. Conversely, the Pelican school district had the fewest people. Only 118 people, or 0.02% of the state's total population, lived in the district.

Between 2000 and 2004, the five fastest growing school districts were Matanuska-Susitna Borough, Kashunamiut, Yupiit, Saint Mary's, and Copper River School districts,

which grew at rates of 1.6% to 3.9%. Between 1990 and 2000, the five fastest growing school districts were Matanuska-Susitna Borough (4%), Unalaska City (3.2%), Kashunamiut (2.5%), Skagway (2.2%) and Alaska Gateway (2.2%) School Districts. Overall, the state's population grew 1.3% per year during the 1990-2000 period, and 1.0% per year during the 2000-2004 period.

Within the boundaries of the Matanuska-Susitna School District, population increased dramatically between 1990-2004 as this area has become home to many Anchorage commuters. A number of new area businesses and other personal and professional services have also attracted people to live within the Matanuska-Susitna area. In the Unalaska School District, commercial fishing, fish processing, and the availability of marine fleet services, such as fuel, repairs and maintenance, have provided many new jobs which have driven population growth in the area.

Sixteen school districts lost population between 1990 and 2000. Much of the population loss occurred within school districts of Southeast Alaska. The average annual rates of decline during this nine-year period were: Pelican (-3.1%), Southeast Island (-2.3%), Chatham (-1.2%) and Hydaburg (-0.1%). A loss of timber harvesting and wood processing jobs within these areas prompted people to move from those mostly rural locations. The military base closures

within the Galena School District (-4.2%) and Bristol Bay School District (-1.2%) led to population declines in those areas. The Chugach School District (-4.4%) lost population through annexation. Outlying areas in the vicinity of Cordova had previously been included as a part of the Chugach school district, although children attended Cordova schools. In 1993, Cordova legally extended its city boundary to include this area.

A change which should have been noted in the 2002 *Population Overview* is that the students in Hyder, a small community located 75 air miles northeast of Ketchikan on the Canadian border, are no longer being bussed to Stewart, British Columbia. The Hyder School was opened in August 2000.

For the most recent one-year period, 2003-04, 30 of Alaska's 54 school districts (55%) were estimated to have lost population while the total state population increased by 1.1%. The largest decreases in population were in the following districts: Hoonah and Aleutian Region (-9.7%), Pribilof Island (-8.2%), Saint Mary's (-7.2%), Hydaburg (-5.4%), Valdez City and Wrangell City (-4.7%), Iditarod Area (-4.5%), Craig City (-4.2), Denali Borough (-3.9%), and Ketchikan Gateway Borough and Southwest Region (both -3.7%). Many of these districts are in Southeast Alaska and showed the continuing impact of cuts in logging and timber production.

Other districts listed have been affected by declining economies of fishing and fish processing. Interior or rural communities are experiencing out-migration to more urban areas.

School districts showing the largest population growth during 2003-04 were: Delta/Greely (8.3%), Tanana City (7.4%), Pelican City (4.4%), Chugach (4.0%), Matanuska-Susitna Borough, (3.9%), Fairbanks North Star Borough (3.5%), Skagway City (3.1%), Yukon Flats (2.2%) and Southeast Island (2.0%). The Delta/Greely and Tanana City School Districts have grown in large part because of the partial reactivation of Fort Greely as a missile defense site. Pelican's growth is probably a statistical fluke: their population surged from 113 in 2003 to 118 in 2004, after falling from 161 in 2001. Other districts with growing populations tended to be areas with higher than average birth rates or higher than average rates of in-migration or immigration.

Alaska Native Regional Corporation Estimates

The Alaska Native Claims Settlement Act of 1972 created 12 in-state Alaska Native Regional Corporations (ANRCs) which cover the entire state except for the Annette Island Reserve, which is Alaska's only American Indian reservation. These regional corporations were established to facilitate Alaska Natives' conduct of both business and nonprofit affairs. Corporation boundaries were created to include, as far as practicable, Alaska Natives who share a common heritage and common interests. Population estimates for each regional corporation by race are shown in Table 3.3. The estimates of Native population living within these regions do not necessarily represent shareholders, since shareholders can live outside their corporation area.

The Native regional corporations with the largest Native populations in 2004 were: Cook Inlet (30,646), Calista (20,459), Doyon (11,751) and Sealaska (10,818). Three of the 12 ANRCs had Native American populations of at least

three quarters of their total population - Calista (84%), NANA (81%) and Bering Straits (75%). From 2000 to 2004, the population of Native Americans increased the most in the following ANRCs: Cook Inlet (+5,351), Calista (+769), Doyon (+518), Bering Straits (+122). The largest decreases in Native American populations were in Sealaska (-574), Bristol Bay (-398), Aleut (-321) and Arctic Slope (-309). All of these Alaska Native population numbers are One Race Alone.

Population of Areas Neighboring Alaska

Alaskans visiting or conducting business with the government of Canada or its people frequently use information on areas and communities that are adjacent to Alaska. Table 3.6 includes population figures for selected areas and communities located within the Yukon Territory and along the border of British Columbia, taken from their 2001 census. The areas of British Columbia (70,342) and the Yukon (31,127) adjacent to Southeast contain 101,469 persons compared to the 70,622 population of Southeast Alaska.

Unfortunately, the Canadian office responsible for their decennial census and for population estimates regards their data as proprietary, and so accurate, timely data is hard to come by. The 2004 population figures for the places in British Columbia and Yukon Territory come from the Provincial or Territorial governments, and some of the place definitions may differ from the place definitions used in earlier years.

Population figures for selected locations within the Russian Far East for 1990 were also published in *Alaska Population Overview - 1991 Estimates*. Population estimates for subsequent years have recently become available. At the last census in 1990, the Russian Far East was home to some 8 million people, over a million of whom live in the Magadan and Kamchatka areas closest to Alaska.

/2 In 2004, data for the Stikine District is unavailable. BC Stats instead reports a total for Unincorporated Areas.

/3 Yukon Bureau of Statistics <http://gov.yk.ca/depts/eco/stats/index.html>

/4 Data on this place is not available for 2004.

/5 This place may be differently defined for 2004.

Data Sources: The data for the years 1991, 1996 and 2001 are from Statistics Canada, the agency responsible for their decennial census. Statistics Canada regards their data as proprietary, and they do not offer more recent data. The data for 2004 comes from the Territorial or Provincial Governments, and may have different geography than did the earlier data.

Chapter 4

Alaska Places

Introduction

This chapter contains 2000-2004 population estimates and 2000 Census population statistics for places. Places include incorporated cities or areas that are legally formed under the laws of the state, Census Designated Places (CDP), and Alaska Native Village Statistical Areas (ANVSA).

Table 4.1 shows Alaska's population by size of place, with separate listings for places with population greater than and less than 2,500 (formerly urban and rural). The largest incorporated cities are listed in Table 4.2. Provisional population estimates by borough/census area and by place for the 2001-2004 period are presented in Table 4.3, along with the 2000 Census. Table 4.4 provides an alphabetical listing of places and their population ranked by size.

Characteristics of Places

Places in Alaska include: incorporated cities or city/boroughs; Census Designated Places (CDP), Alaska Native Village Statistical Areas (ANVSA) and Tribal Designated Statistical Areas (TDSA). As noted above, changes in the population for places between 1990 and 2000 may have resulted from changes in geography as well as in population. If you wish to compare the population data given in this edition to years before 2000, you must consult the previous edition of this work, entitled *Population Overview 2001-2002* and *Census 2000* for year 1990 population estimates using year 2000 geography. For 1990 population in 1990 boundaries the reader should refer to the 1999 Alaska Population Overview. In the case of cities, change over time can result from annexation as well as from changes in the normal population components such as births, deaths, and migration. In the case of CDPs and ANVSAs, all boundaries were as defined by the 2000 census.

Urban is redefined

The U.S. Bureau of the Census formerly defined as "urban" places with populations of 2,500 or more. In 1999, Alaska had 20 cities large enough to be considered urban. With the 2000 Census, the Census Bureau changed its definition of urban to more complicated criteria, based on Urban Areas or Urban Clusters as defined by block population density and other factors. This new definition cannot be replicated in annual estimates, nor can it change until the next census. The Census Bureau has warned

that it is to be used for statistical purposes only and not programmatic purposes. We will continue to report the number of cities and places with population greater than or equal to 2,500 in order to provide continuity to the older definition.

Alaska is the largest of the United States in area, and has the lowest population density. It is larger than the states of Texas, California and Montana combined, and its overall population density averages only 1.1 persons per square mile. The average U.S. population density was 79.6 persons per square mile in 2000. This, however, paints a somewhat misleading picture of population distribution in the state. According to the Alaska Department of Natural Resources, 60% of the land in Alaska is owned by the federal government, another 28% is owned by the state, and 11% is owned by Native corporations. Only about one percent of the state is in other private ownership. The other private ownership lands cover an area about 27% less than the land area of the states of Massachusetts or New Jersey. Most of the federal and state lands are in parks and refuges or have development prohibitions or restrictions, and while

Source: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit

potentially open for development, the Native owned lands are generally not for sale. Of the land potentially available for development, a substantial amount is very rugged, inaccessible or otherwise inhospitable. Thus, a fairer picture of settlement densities on available, usable land on the "Last Frontier" is likely to be closer to 100 persons per square mile rather than one person per square mile. Contrary to widely held perceptions, Alaska's population is predominately found in relatively dense settlements set in or near vast tracts of unsettled land. In 2004, 75.1% of the population lived in places with populations of at least 2,500, only slightly below the national average. Under the Census Bureau's new definition of urban, 62.7% of Alaskans were living in urban areas in 2000. By comparison, 69.6% of Alaska's population lived in places of 2,500 or more in 1990 and 64.3% in 1980.

There were 32 places in Alaska with populations above 2,500 in 2004. The majority of Alaska's population, 75.1%, lived in these 32 places. The Municipality of Anchorage—the state's largest city—was home to 42.3% of the overall population. Anchorage has 56.3% of the population in places of 2,500 or more. The remaining 43.7% of the population living in places of 2,500 or more lived in places ranging in size from 2,540 to 30,966 people. Of the remaining 24.9% of the population living in places of less than 2,500 people, 17.3% lived in some 315 small places, and 7.6% lived outside any CDP. Most people living outside

of a place were concentrated around cities and CDPs or along road systems in the Fairbanks North Star Borough, Matanuska-Susitna Borough, Kenai Peninsula Borough, Yukon-Koyukuk Census Area, Kodiak Island Borough and Southeast Fairbanks Census Area (Table 4.1 and Figure 4.1).

Although it is not a census concept, Alaskans sometimes refer to the "Railbelt," the populated area served by the Alaska Railroad. The Railbelt includes Kenai Peninsula Borough, the Municipality of Anchorage, Matanuska-Susitna Borough, Denali Borough, the area around Nenana on the Parks Highway and Fairbanks North Star Borough. The total population of the Railbelt in 2004 was approximately 486,200, or 74.2% of the State's population.

In Alaska, race and ethnic groups tend to be concentrated by place. Overall, 73.9% of Alaska's population lived in places of 2,500 or more in 2000. The proportion of each race and ethnic group who lived in places of 2,500 or more was: White Alone (76.2%), Native Alone (46.2%), Black Alone (94.5%), Asian Alone (91.1%), Hawaiian & Pacific Islander (92.7%), Two or more races (79.1%) and Hispanics (87.3%). Alaska Natives still tend to predominately live in small "rural" communities. On the other hand, the vast majority of Blacks, Asians, Pacific Islanders and Hispanics are found in places of 2,500 or more. More specifically, 96.8% of Alaska's Black population lives in the Municipality

of Anchorage and Fairbanks North Star Borough. Much of this population is associated with the military. Similarly over 83.5% of the Asian population and 78.8% of the Hispanic population of Alaska lives in the Municipality of Anchorage, Juneau Borough, Kodiak city, Unalaska city and Fairbanks North Star Borough. Almost 82% of the Hawaiian and Pacific Islanders live in the Municipality of Anchorage.

Incorporated Cities

As of July 1, 2004 there were 149 incorporated cities in Alaska. Of these, 19 have populations 2,500 or more, and would have been considered urban by the old Census definition. Table 4.2 lists these cities, ranked by 2004 population. Another seven cities had populations between 1,000 and 2,500. These included Dillingham (2,422), Cordova (2,298), Wrangell (2,023), North Pole (1,532), Houston (1,368), Craig (1,127), and Hooper Bay (1,124).

Census Designated Places

Census Designated Places (CDPs) have no incorporated boundaries. The limit of their settled area is defined by geographic features such as streams, roads or ridges that encompass the settled area. To be recognized as a CDP, a place must be a fairly dense settlement with a sense of community. The CDP must also have been recognized as possibly fitting this definition in 1996 when the Bureau of the Census began planning the 2000 census. A total of 200 unincorporated communities qualified as CDPs in 2004. Alaska had several CDPs with populations larger than in many incorporated cities. Twelve of these would meet the Bureau of the Census' former definition of urban places. These were College (12,186), Knik-Fairview (9,223), Lakes (6,987), Kalifornsky (6,617), Tanaina (6,265), Meadow Lakes (5,945), Sterling (4,940), Eielson AFB (4,587), Nikiski (4,279), Gateway (3,554), Butte (2,963) and Big Lake (2,912). Fifteen other CDPs had populations between 1,000 and 2,500, including Ridgeway (1,943), Bear Creek (1,897), Ester (1,811), Anchor Point (1,792) and Deltana (1,777).

Alaska Native Villages

The Alaska Native Claims Settlement Act of 1972 identified 209 Alaska Native Villages (ANVs). Populations for these villages were first reported in the 1980 Census. Native villages may have boundaries that are the same or different from cities or CDPs. Because of confusion over the legal status of ANVs, the Census Bureau changed the name to Alaska Native Village Statistical Area (ANVSA) for the 1990 census to emphasize that these were places for statistical purposes only. In 1990 there were 217 ANVSAs. Today there are 211 ANVSAs. Several have lost their status as Native villages and have become CDPs. One example of this is the former Alexander ANVSA, which became Susitna CDP.

For 1990 and 2000, the Census Bureau asked village councils to define the boundaries of the ANVSAs. In many cases, these continued to correspond to city or CDP boundaries. In other cases, they did not. Thus, the 2000 ANVSAs may differ from other community boundaries, and they may differ from the boundaries as defined in 1990. In the following tables, there are specific indications where 2000 ANVSA boundaries are different from city or CDP boundaries. In some cases, the boundaries of ANVSAs may overlap more than one CDP.

In a few cases, a village council has defined a Tribal Designated Statistical Area (TDSA) to be vastly larger than the local community area. These include Ninilchik TDSA and Kenaitze TDSA in Kenai Peninsula Borough, and Chickaloon TDSA, Knik TDSA, and Kanatak TDSA in Matanuska-Susitna Borough. Lastly, Tetlin TDSA has been defined in Southeast Fairbanks Census Area. In the case of Tetlin, the TDSA is only slightly larger than Tetlin CDP. The resulting data for the larger of the TDSAs are useless and misleading for almost all statistical purposes. A substitution of CDP information is recommended where an accurate portrait of the character of the community is needed.

Unorganized Territory

Slightly under three-fifths of Alaska's land area lies outside of any incorporated city or borough. In this unorganized territory the state performs all governmental functions. For 2004, it was estimated that 19,722 people, or 3.0% of the state's population, lived in such "unorganized" territory. The population living in these unorganized parts of the state is declining. The majority of these people in the Unorganized Borough live in a CDP or ANVSA. For comparison, the number of people in 1990 who lived in unorganized territory numbered 23,158 or 4.2% of the state's population. A decade earlier in 1980, 20,000 people, or 5.0% of the state's population, lived outside the structure of any sub-state government entity.

The number of people who lived in unorganized territory outside of all CDPs or ANVSAs and beyond the purview of any government other than the State of Alaska in 2004 totaled 1,709 or 0.26% of the state's overall population. All but a few hundred of these people live outside communities but along a road system which allows them access to a community. Only a very small number of persons live as isolated individuals or individual families on islands or in remote rural Alaska with access to a community only available by bush plane or small boat.

CDP-Census Designated Place *Alaska Native Village Statistical Area **Tribal Designated Statistical Area

Sources: Alaska Department of Labor & Workforce Development, Research and Analysis Section, Demographics Unit; and the US Census 2000

Glossary

Alaska Native Village Statistical Area (ANVSA): Designated boundaries that encompass the settled area associated with each Alaska Native Village (ANV). Officials of Alaska Native Regional and Village Corporations and Census officials delineated ANVSAs for the sole purpose of presenting census data. ANVSAs replace the ANVs that the Census Bureau recognized for the 1980 census, and in some instances the boundaries were changed.

Alaska Native Regional Corporation: Twelve corporate entities in Alaska established under the Alaska Native Claims Settlement Act of 1972 to conduct both business and nonprofit affairs of Alaska Natives. The Alaska Native Regional Corporations (ANRCs) cover the entire state of Alaska, except for the Annette Island Reserve. Boundaries were established by the Department of the Interior, in cooperation with Alaska Natives and were first identified for the 1980 census.

Alaska Permanent Fund: A state savings account of oil revenues, created in 1976 by a voter-approved amendment to the state Constitution. A portion of the fund's income is annually distributed to eligible Alaska residents. The total balance of the fund currently exceeds \$25 billion.

Average Annual Rate of Change: A standardized statistical measure of the rate of change which can be compared for any number of years because it converts the change for any period to a yearly measure.

Census Designated Place (CDP): A closely settled unincorporated population center.

Cohorts: A group of persons who experience the same event or series of events in a particular period. For example, all persons born in a particular year or all couples married in a particular year are considered cohorts of that year.

Crude Birth and Death Rates: The number of births or deaths during a time period, divided by the total population at the middle of that time period.

De Facto and De Jure Counts: In a census, the enumeration is affected by the type of population count to be obtained. The census may be designed to count persons where they are found on census day (a de facto

count) or according to their usual place of residence (a de jure count). The U.S. Census is a de jure count. Only transients who have no usual place of residence are counted on a de facto basis.

Dependency Ratio: The proportion of the population dependent on the adult population. For youth dependent, the under 18 population is divided by the age group between 18 and 65. For elderly dependent, the population over 64 is divided by the age group between 18 and 65.

Error of Closure: The difference between an estimates series and a decennial census. Error of closure can be the product of small cumulative error in an estimates series over a decade, or it may result from differential accuracy of two decennial censuses.

Fertility: The childbearing performance of individuals, couples, groups or populations. Sometimes measured as the number of live births per 1,000 people in a given year or as the number of children born to women of a particular childbearing age.

Gross Migration: The sum of the in-migration and out-migration for a geographic area over time. Gross migration is a measure of the total movement or turnover of population. Gross migration is of most interest to people in industries such as real estate and transportation who need information on population turnover rather than overall gain or loss.

Group Quarters: All people not living in households are classified as living in group quarters. Two general categories of people in group quarters are recognized: (1) Institutionalized people (such as those in prisons, nursing homes, psychiatric hospitals and residential treatment facilities) and (2) other people in group quarters (such as those in group homes, college dorms, military barracks, fish processing and logging camp bunkhouses and emergency shelters).

Household: All the people who occupy a housing unit. A housing unit is a house, an apartment, a mobile home, a group of rooms or a single room that are occupied as separate living quarters. Separate living quarters are those in which occupants live and eat separately from

any other people in a building and which have direct access from the outside of the building through a common hall. The occupants may be a single family, one person living alone, two or more families living together, or any other group of related or unrelated people who share living arrangements.

In-migrant: A person who moves into a region or community from another for the purpose of establishing a permanent residence. Movement across boundaries within a nation is called in- migration. Movement across international borders is referred to as immigration.

Median Age: The age that divides a population into two numerically equal groups; that is, the mid-point, where half the people are younger than this age and half are older.

Migration: The movement of people across a specified boundary to establish a new permanent residence. Movement between countries, states or counties is considered migration. Movement within a county is considered "local movement."

Mortality: Death as a component of population change. Usually measured as the number of deaths per 1,000 people in a given year.

Natural Increase: The difference between the number of births and the number of deaths in a given period, usually a year.

Net-migration: The difference between in-migration and out-migration. Net in-migration describes the situation when more people move into the area than out. Net out-migration describes the situation where more people leave the area than come in.

Out-migrant: A person who moves from one region or community to another for the purpose of establishing a permanent residence. Movement across boundaries within a nation is called out- migration. Movement across international boundaries is referred to as emigration.

Place: A Census Designated Place (CDP), incorporated city, borough or Alaska Native Village Statistical Area (ANVSA).

Population Estimate: A computation of the probable population of a geographic area for a particular time. An estimate is usually done for a past time period for which indicator data already exist.

Population Projection: A computed future population number based on methodology which trends known historical data.

Resident: A person who lives in Alaska at least six months of the year and/or has no other usual place of residence elsewhere. Census residency is different from Alaska Permanent Fund Residency, which requires living in Alaska for at least one calendar year beginning January 1.

Sex Ratio: The number of males per 100 females.

Tribal Designated Statistical Area (TDSA): A statistical entity delineated for the Census Bureau by a federally recognized American Indian tribe that does not have a land base (a federally recognized reservation or off-reservation trust land). A TDSA generally encompasses a compact and contiguous area that contains a concentration of people who identify with a federally recognized American Indian tribe and in which there is structured or organized tribal activity.

Urban Place: An urban place was formerly a place with population of 2,500 or more. Places with less than 2,500 people were formerly considered rural. The Census Bureau has changed their definition of urban and rural to something far more complicated. The details of the definition may be found at http://www.census.gov/geo/www/ua/ua_2k.html.

The definition is not implement-able with the available data, so for this publication, the authors have avoided the terms urban and rural, and have instead used "places with population of at least 2,500" for the places which would formerly have been urban, "places with population of less than 2,500" for the places which would formerly have been known as rural, and similar circumlocutions.
