Preface

Alaska Population Overview

The *Alaska Population Overview* is a portrait of the state's ever-changing population. Population numbers presented here are for residents as defined by the U.S. Census Bureau. The definition of "resident" may differ in other contexts. Seasonal populations in parts of Alaska may be higher than the full-time resident population.

The Alaska Department of Labor and Workforce Development's Research and Analysis Section, or R&A, prepares resident population estimates annually for all boroughs, census areas, cities, and census-designated places in Alaska as well as certain special areas such as school districts and Alaska Native regional corporations. The estimates are used for a range of purposes, including research and planning, distribution of resources by public and private agencies, and updating of population projections.

This edition of *Alaska Population Overview* consists of four chapters that include 2011 and 2012 population estimates for the state and its boroughs, census areas, and places as well as information from the 2010 Census. This overview's population concepts and definitions are the same as those the U.S. Census Bureau uses.

Development of Estimates

The population estimates begin with data from the last decennial census (the 2010 Census for the 2011 and 2012 estimates), which reflect adjustments for known errors in the census and post-census changes in geography. For each year following the last census, R&A creates the latest series of post-census population estimates, or "vintage," by using or revising administrative data that indicate population change. These data include Permanent Fund Dividend applications, military and group quarters surveys and research, and a state total population estimate from the U.S. Census Bureau. After release of data from the subsequent decennial census (e.g., Census 2010 for the 2001 to 2009 estimates), R&A makes final adjustments for the intercensal years.

Historical population data are updated each year, so users should take time series information from the most recent publication or the Research and Analysis Section's Web site (laborstats.alaska.gov), rather than adding the most current year's estimate to those published previously.

Acknowledgments

Thanks to the Alaska Department of Commerce, Community, and Economic Development; the Alaska Department of Health and Social Services; and the U.S. Census Bureau for regularly providing information that is essential to the production of these estimates. Thanks also goes to the personnel departments of the Army, Air Force, and Coast Guard in Alaska for the statistics they provide each year. Special thanks goes to the Alaska Department of Health and Social Services for financial support in the production of these estimates.

Further Information

This publication as well as the population estimate methods and many other demographic reports, maps, and databases with the most requested Alaska population statistics are available on the R&A Web site: laborstats.alaska.gov. Click "Population and Census."

Address requests for Alaska population information to Eddie Hunsinger, Alaska Department of Labor and Workforce Development, Research and Analysis Section, P.O. Box 115501, Juneau, AK 99811-5501. Telephone: (907) 269-4960; FAX: (907) 465-4506; e-mail: eddie.hunsinger@alaska.gov. Comments or suggestions about the content or format of this publication are welcome.

Executive Overview

Alaska Population Overview

State Population Estimate

The July 1, 2012, population of Alaska was 732,298 (52 percent male and 48 percent female), and represented 0.2 percent of the national population. Between July 2011 and July 2012, Alaska's overall population increased by 9,162 people (1.3 percent).

Age

The median age of Alaska's population in 2012 was 34.1 years — somewhat less than the national median age of 37.4. The population of Alaskans age 65 or older was 63,832, representing 8.7 percent of the total state population. The school age population (children ages 5 to 17) of Alaska was 134,676 in 2012, making up 18.4 percent of the total. Areas with larger percentages of Alaska Natives were generally younger. (See Figures 1.4 and 2.7.)

Race and Ethnicity

As of July 1, 2012, Alaska's population was 14.8 percent Alaska Native or American Indian, 67.5 percent white, 5.8 percent Asian, 3.7 percent African American, 1.2 percent Native Hawaiian or other Pacific Islander, and 7.1 percent multi-race. Alaskans of Hispanic origin made up 6.1 percent of the state population in 2012. Boroughs and census areas in northern and western Alaska had larger proportions of population that were Alaska Native. (See Tables 1.13, 1.14, and Figure 1.3.)

Migration

Migration is the most unpredictable component of population change. Between 2011 and 2012, Alaska's high migration rates continued to be high, with 48,271 migrating in and 46,397 migrating out, for a net migration gain of 1,874 people. Relatively small shifts in migration to or from Alaska can have major effects on net migration. The Matanuska-Susitna Borough usually leads the state in growth due to net migration. (See Tables 1.2 and 2.1.)

Births and Deaths

From 2011 to 2012, Alaska added 11,034 young people to its population by births. That's a birth rate of 1.5 per 100 people, compared to 1.3 per 100 for the nation as a whole. There were 3,746 deaths in Alaska from 2011 to 2012, which is a relatively small number for the size of our population and in line with our population's relatively young age. (See Table 1.1.)

Population Centers

80.0 percent of Alaska's population lived in cities or places with populations of 2,500 or more in 2012. Alaska's cities with more than 10,000 people in 2012 included the Municipality of Anchorage (298,842), the City and Borough of Juneau (32,832), and the City of Fairbanks (32,070). These three areas were home to 49.7 percent of Alaska's population.

The five boroughs in the state with the largest populations made up 79.6 percent of the state in 2012. These included the Municipality of Anchorage as well as the Matanuska-Susitna Borough (93,801 people), Fairbanks North Star Borough (100,343), Kenai Peninsula Borough (56,756), and City and Borough of Juneau. (See Tables 4.1 and 2.1.)

Households

Alaska had 259,858 households in 2012, an increase of 1.1 percent since 2011. Households in Alaska averaged approximately 2.71 people in 2012. Of the total, 36.1 percent of households had one or more people under age 18, and 17.7 percent had one or more people age 65 or older. (See Table 1.5.)

Group Quarters

The group quarters population of Alaska represents those living in dwellings other than households; for example, shared housing such as dormitories or prisons. In 2012, 27,568 people lived in group quarters in Alaska, representing 3.8 percent of the total population. Approximately 48.8 percent of Alaska's group quarters population in 2012 resided in the Municipality of Anchorage or Fairbanks North Star Borough. The Aleutian chain, with its large fishing and seafood processing industries, had the highest percentage of group quarters population in 2012, at 50.1 percent. (See Table 2.4.)

Military

Alaska was home to 22,438 active duty military personnel in 2012, representing 3.1 percent of the state's total population. Of those, 58.9 percent were in the Army, followed by 32.2 percent in the Air Force and 8.6 percent in the Coast Guard. In 2012, the state had 36,565 military dependents. Boroughs with large active duty military and dependent populations in 2012 included the Municipality of Anchorage, Fairbanks North Star Borough, and Kodiak Island Borough. (See Figure 3.1 and Table 3.1.)

Chapter 1

The State Population

Introduction

This chapter covers statewide population trends for Alaska. It contains information on the components of population change (births, deaths, and migration), as well as discussion of statewide age, sex, race and ethnicity, and household composition.

2012 Population and Density

Alaska had 732,298 residents on July 1, 2012, or .23 percent of the U.S. population. The 2012 resident population of the United States, excluding territories and military overseas, was 313,914,040.

The U.S. comprises 50 states plus the District of Columbia. Alaska ranked 47th in population in 2012, unchanged since 2002. The states with fewer people were Wyoming at 576,412 people; Vermont with a population of 626,011; the District of Columbia with a population of 632,323; and North Dakota with a population of 699,628.

Alaska has 570,641 square miles of land, or 16.1 percent of the U.S., and its water area is 91,316 square miles. Over 35 percent of total U.S. water area is in Alaska.

Alaska had 1.3 people per square mile in 2012, in contrast to 88.9 per square mile for the U.S. as a whole. Excluding

Anchorage, which contains 41 percent of the state's population but only 0.3 percent of the land, gives the rest of Alaska an average of 0.8 people per square mile in 2012.

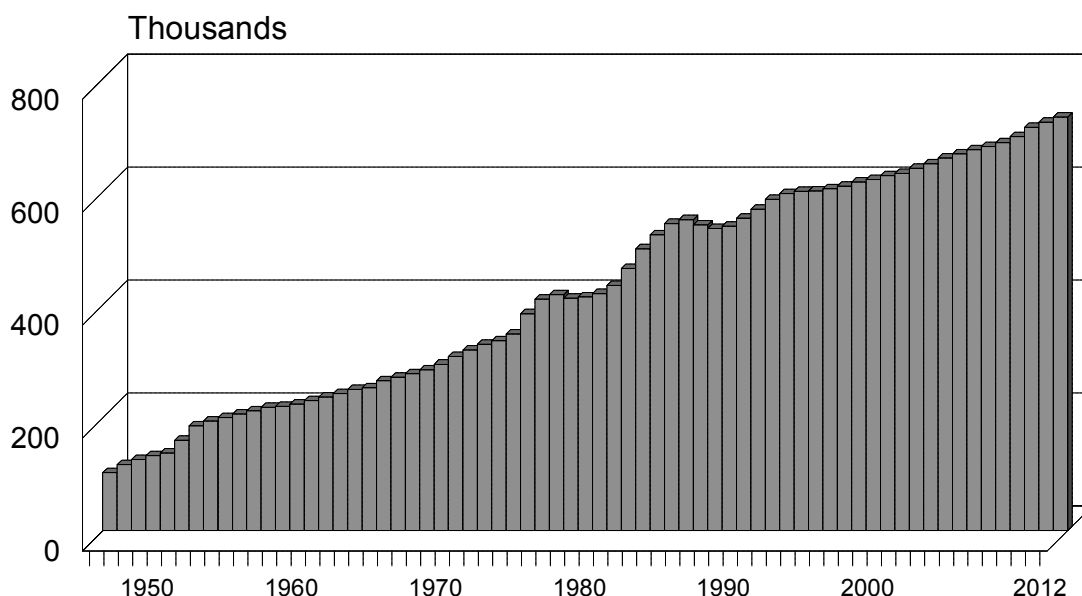

The majority of Alaskans live in towns and villages or clustered settlements. Most of the state's land area is in federal, state, and Alaska Native corporation lands. Excluding these areas, most of which place exclusions or restrictions on settlement, shows only about 1 percent of the state's land is in other private ownership. In all, these private holdings amount to an area about 27 percent smaller than Massachusetts or New Jersey, and a fair amount of this land is inaccessible or unusable for settlement. Consequently, most of Alaska has settlements of moderate density surrounded by large tracts of uninhabited land.

Alaska Population History

The population of Alaska was quite small before the gold rush in the 1890s, though early territorial censuses were incomplete. The first census in 1880 counted only 33,426 people. By 1900, the gold rush had nearly doubled the state's population, to 63,592.

Following the turn of the century, the population of Alaska remained roughly the same for 40 years. By 1939, it was 59,278. The state's gold production had declined, and much of the state remained inaccessible.

World War II brought the construction of the ALCAN (Alaska-Canadian) Highway. The result was dramatic growth of the state's population, as shown in Table 1.1 and Figure 1.1. The war and ALCAN construction played a key role in the development of both Anchorage and Fairbanks.

Alaska's population grew rapidly from the end of World War II in 1945 through the Korean War years of 1950 through 1953. The state gained more than 25,000 people between 1951 and 1952 alone. The population then grew at a slower pace until the military buildups for the Vietnam War in the 1960s. Alaska had approximately 224,000 people at statehood in 1959.

The building of the 800-mile Trans-Alaska Oil Pipeline dramatically affected population growth in the 1970s. The pipeline linked the giant North Slope oilfield of Prudhoe Bay with the oil terminal shipping facilities at Valdez. Construction began in 1973 and peaked between 1974 and 1975 with a migration gain of more than 30,000 people for that year. The boom from pipeline construction was followed by a large population loss with its completion. Between 1977 and 1978, the state had a net migration loss of more than 13,000 people.

With new revenue from oil production, Alaska experienced a massive economic boom between 1980 and 1985. The population increased nearly 30 percent in those five years, making it the fastest-growing state in the nation. The most growth was between 1982 and 1983, when the state gained nearly 25,000 people from net migration alone.

By 1986, falling oil prices triggered a recession. Between 1986 and 1987 alone, the state lost more than 19,000 people through net migration for an overall population loss of 9,400. The cumulative loss of people to net out-migration in the 1986 to 1989 period was about 40,000.

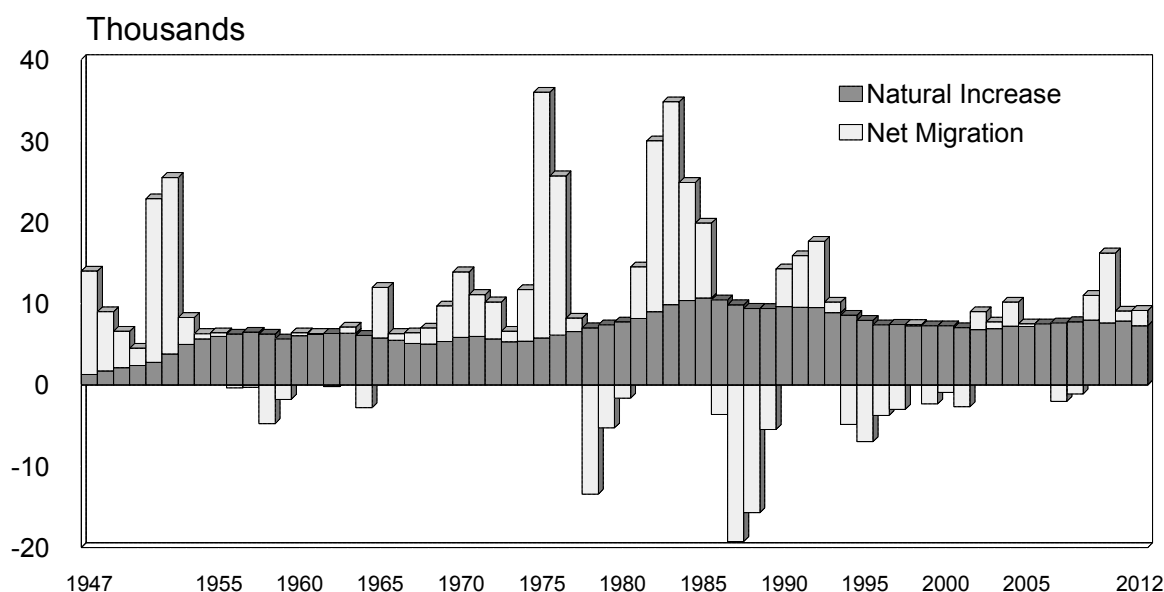

The state had a high number of births during those years, but the population still dropped by over 2 percent from its 1986 level. In 1989, the economy began to recover and net migration numbers shifted to positive again.

In the final analysis, Alaska's population increased over 36 percent between 1970 and 1980 and nearly 32 percent between 1980 and 1990. For comparison, the United States as a whole grew just over 10 percent between 1970 and 1980 and another 10 percent between 1980 and 1990.

The 1990s began with three years of economic recovery and net migration gains that were followed by a period of net migration losses due in part to military base closures. Birth rates also declined in the 1990s due to the aging of the "baby boomers" (people born between 1946 and 1964), and the state's population increased by less than 14 percent for the decade, slightly more than that of the nation as a whole.

Alaska grew steadily between 2000 and 2010, and though high population turnover continued due to migration, the gains and losses were fairly balanced through 2009. Between 2009 and 2010, the state posted a net migration gain of more than 8,500 people, the most for a single year since the 1980s.

This big gain was likely related to the late-2000s recession, which hit the nation harder than Alaska.

Components of Change

Population change is made up of natural increase (births minus deaths) and migration, as shown in Table 1.1 and Figure 1.2. Natural increase is the fairly stable component of population change, as birth and death trends do not generally change quickly. Migration is the unstable component of population change in the state, often shifting dramatically from one year to the next.

Births and Deaths

Births are a big part of population change for Alaska every year. In recent years, the state typically gained around 11,000 new residents annually due to births alone.

Birth rates are best analyzed with a measure called the “total fertility rate,” which is the total number of children that

would be born to a woman if she lived her entire life with that year’s “age specific fertility rates” (number of births per woman by age). A total fertility rate of around 2.1 is needed for a population to replace itself through births alone.

Based on data from the National Center for Health Statistics, the total fertility rate for the United States was between 1.7 and 2.0 from the early 1970s to late 1980s. In 1990, the national total fertility rate reached 2.1 children per family and remained between 2.1 and 1.9 through 2011.

Alaska’s total fertility rate has consistently been above the national rate. Based on Alaska birth records and annual population estimates, Alaska’s rate from the early 1970s through late 1980s was between 2.0 and 2.5. In 1990, Alaska’s total fertility rate reached more than 2.6, but it declined thereafter and has varied between 2.2 and 2.6 since the mid-1990s.

The total fertility rate for the Alaska Native and American Indian population in Alaska has consistently been much higher than for the state as a whole. In 1970, the total fertility rate for Alaska Natives was 4.6. This figure declined to a low of 2.7 in 1976, but rose during the 1980s and reached 3.9 in 1990. Since the mid-1990s it has varied between roughly 3.0 and 3.5.

The “life expectancy at birth” is the number of years that a person would live if that person lived an entire life with that year’s age-specific rates of mortality (number of deaths per population by age).

According to the National Center for Health Statistics, the national life expectancy at birth increased steadily from 73.7 in 1980 to 78.7 in 2010. Based on Alaska death records and annual population estimates, Alaska’s statewide life expectancy increased from 72.1 in 1980 to 78.1 in 2010. The life expectancy at birth for Alaska Natives and American Indians increased from 65.7 in 1980 to 70.7 in 2010.

Table 1.1 shows trends in the crude birth rate (number of births divided by the total population) and crude death rate for Alaska. New births have accounted for less than 2 percent of the population since the early 1990s, when the large population of baby boomers was beginning to age past child-bearing years.

The crude death rate reached a low at 0.38 percent of the population in the mid-1980s, and with aging has increased some since then. Between 2010 and 2012, an estimated 22,736 people were born in Alaska and 7,573 died, for a natural increase of 15,163. This translated into a growth rate of 1.1 percent as a result of natural increase.

The crude birth rate for Alaska Natives and American Indians in Alaska in 2010 to 2012 was 2.3 percent, and the crude death rate was 0.7 percent. Births minus deaths yielded an annual natural increase of 1.6 percent for Alaska Natives.

The crude birth rate for Alaska’s white population between

2010 and 2012 was 1.3, and the crude death rate was 0.5 percent, for a natural increase of 0.8 percent. The crude birth rate for African Americans in Alaska was 1.5 percent in 2010 to 2012, and the death rate was 0.3 percent, for a natural increase of 1.1 percent per year. For Asians, the birth rate was 1.9 percent, and the death rate was 0.3 percent, for a natural increase of 1.6 percent. The crude birth rate for Hispanics was 1.7 percent and death rate was 0.2 percent, for a natural increase of 1.5 percent.

Migration

As shown in Figure 1.2 and Table 1.2, net migration can vary widely from year to year. Tens of thousands of people move both to and from the state each year, and relatively small fluctuations in the number moving in or out can yield a large net migration gain or loss.

In recent years, fluctuations in net migration for Alaska were often attributed to economic trends and events, but it is also important to note the significant effect of troop movements. Much of the migration to and from Alaska depends on the stationing of the nation's military, which is tied to historical events and planning at the federal level.

The majority of people living in Alaska are migrants to the state; as of the 2010 Census, only 39.1 percent of Alaskans were born here. Regionally, these proportions varied from a low of 9.4 percent born in Alaska in Aleutians West Census Area (home to the highly transient city of Unalaska) to a high of 95.3 percent for Wade Hampton Census Area. Generally, over 75 percent of the residents of rural Alaska were born in Alaska, compared to 33.6 percent for Anchorage, 32.2 percent for Fairbanks North Star Borough, and from

roughly 35 percent to 40 percent for the Matanuska-Susitna Borough, Kenai Peninsula Borough, and City and Borough of Juneau.

Based on data from the U.S. Census Bureau's American Community Survey, 7.2 percent of Alaskans were foreign-born in 2012. The share of foreign-born for Alaska in the 2000 Census was 5.9 percent. 13.0 percent of all people in the U.S. were foreign-born, up from 11 percent in 2000. Just 3.6 percent of all Alaska's population did not have U.S. citizenship, compared to 7.2 percent for the U.S. as a whole.

At the state and national level, data to track annual migration are available from Internal Revenue Service tax statistics, and these show that Alaska has among the highest rates of migration turnover in the nation. Even without migration of the seasonal workforce, Alaska had the second-highest rate of gross migration (in-migration plus out-migration, divided by total population) in the nation for 2009 to 2010 (the latest data available), at 14.5 percent. Alaska's rate was lower than that of the District of Columbia (18.1 percent) and slightly higher than Arizona (14.1 percent). The average for all states was 9.7 percent.

The states that exchange the most people with Alaska typically have large populations and/or are close geographically. For 2000 to 2010, Washington sent and received the highest number of movers to and from Alaska, followed by California and Texas.

Race and Ethnic Categories

Race and ethnic categories used by the U.S. Census Bureau have changed over the decades, and this affects the compa-

Table 1.3
Alaska Native and American Indian and Total Population, Alaska, 1910 to 2012

Year	Alaska Native or American Indian		Alaska Native or American Indian		Alaska Native or American Indian Alone or in Combination		Total Population

2011	108,050	14.9	122,465	16.9	139,762	19.3	723,136
2012	108,081	14.8	122,944	16.8	142,764	19.5	732,298

Note: Estimates for 2000, and 2010 to 2012 are based on Bridged race categories.

Sources: U.S. Census Bureau; and Alaska Department of Labor and Workforce Development, Research and Analysis Section

rability of data from different years. Major race groupings in 2010 Census data are white, black or African American, American Indian and Alaska Native, Asian, and Native Hawaiian or Other Pacific Islander. Individuals may write in their race under “some other race,” and those responses are assigned one of the major race categories after the census. Tables noted “modified race data” in this publication include the adjustment for some other race, and those without that note do not have the adjustment. There is also an ethnic categorization, which is separate from race, where people can report Hispanic origin.

Because the American Indian population in Alaska is quite small relative to the Alaska Native population, the term “Alaska Native” is sometimes used in this publication to refer to “American Indian and Alaska Native.” “Native Hawaiian or Other Pacific Islander.” is sometimes shortened to “Hawaiian or Pacific Islander” or “Pacific Islander.”

The 2000 Census brought a fundamental change to race and ethnicity data collection by giving the option to report more than one race. As a result, race data from the 2000 and 2010 censuses are far more complex and are not directly comparable to race data from previous censuses.

Because data for births, deaths, and many other events and groups are not yet collected on a multi-race basis, “bridged-race” race estimates, which assign all individuals to a single race group, are provided by the Alaska Department of Labor and Workforce Development as well as the National Center for Health Statistics. Unless numerator data are based on multi-race categories, we recommend using “bridged-race” data as denominators.

Historical Alaska Native Population

Few reliable data are available on the overall size of the Alaska Native population before the 1929 territorial census. In 1929, 29,983 Alaska Natives made up 50.6 percent of Alaska’s population. Although their numbers have grown rapidly since 1929, the non-Native population has grown more rapidly. (See Table 1.3.)

Current Race and Ethnic Composition

The 2012 bridged-race data show the Alaska Native and American Indian population in Alaska was 122,944, or 16.8 percent of the state’s total. Alaska’s white population was 518,982, or 70.9 percent of the state total, down from 71.4 percent in 2010. Asians and Pacific Islanders made up 7.6 percent of the state total, and African Americans made up 4.8 percent. Alaska had 44,792 residents of Hispanic origin in 2012, which was 6.1 percent of the state total, up from 5.5 percent in 2010. (See Tables 1.4, and 1.9 to 1.14.)

Population by Age

The size of each age group in the population is affected by aging along with annual births, deaths, and migration. Alaska’s age structure as of 2012 is shown in Table 1.8 and Figure 1.3. Other than aging, the largest factor affecting Alaska’s age

structure is migration, which is particularly high for 18-to-35-year-olds and their young children under school age.

While Alaska’s total population increased 3.1 percent between the 2010 Census and July 2012, children under the age of 5 increased 1.3 percent, from 53,996 to 54,724. (See Figure 1.4.) This age group currently makes up 7.5 percent of the state’s population. From its high in 1993, the number of young children steadily declined to a low of 47,270 in 2001, but rose steadily over the next nine years. The number of people in this age group is volatile, as it is directly affected by both migration and birth rates.

The population aged 5 to 13 are of elementary and middle school age. This group grew by 2.8 percent between 2010 and 2012, from 91,587 to 94,108, and made up 12.9 percent of the state population in 2012.

The number of youth aged 14 to 17 decreased slightly since 2010, going from 41,795 (5.9 percent of the state total) to 40,568 (5.5 percent) in 2012. In general, teenagers are less subject to changes in migration flows than younger age groups.

The 18-to-24 age group — which has very high rates of migration for school and work — increased slightly since 2010, from 74,881 (10.5 percent of the state total) to 75,045 (10.2 percent) in 2012. In general, migration yields a net loss of people at ages 18 and 19, followed by a net gain for ages 20 to 24.

The population aged 25 to 34 is composed of young adults in prime ages for forming families and households. People in this age group contribute heavily to the number of children under age 5. In 2012, 15.1 percent (110,346) of Alaska residents were ages 25 to 34, up from 14.5 percent (103,125) in 2010. Alaska typically has strong net migration gains of people ages 25 to 34.

Alaska’s population ages 35 to 44, who are mostly workers, increased slightly between 2010 and 2012. The group was 12.6 percent (92,424) of the state total in 2012, down from 13.1 percent (92,974) in 2010.

The 45-to-54 age group includes a large portion of the baby boomers (people born during the high birth rate years of 1946 to 1964). This segment of the population decreased from 15.6 percent of the state total in 2010 to 14.6 percent in 2012. As of 2012, an estimated 106,779 Alaskans were ages 45 to 54.

The state typically has net migration losses of those aged 55 to 64, but aging plays a larger role in determining this group’s size. This group has grown sharply over the past 2 years with the aging of the baby boomers. The state had 94,472 people (12.9 percent of the state total) aged 55 to 64 in 2012, up from 85,909 (12.1 percent) in 2010.

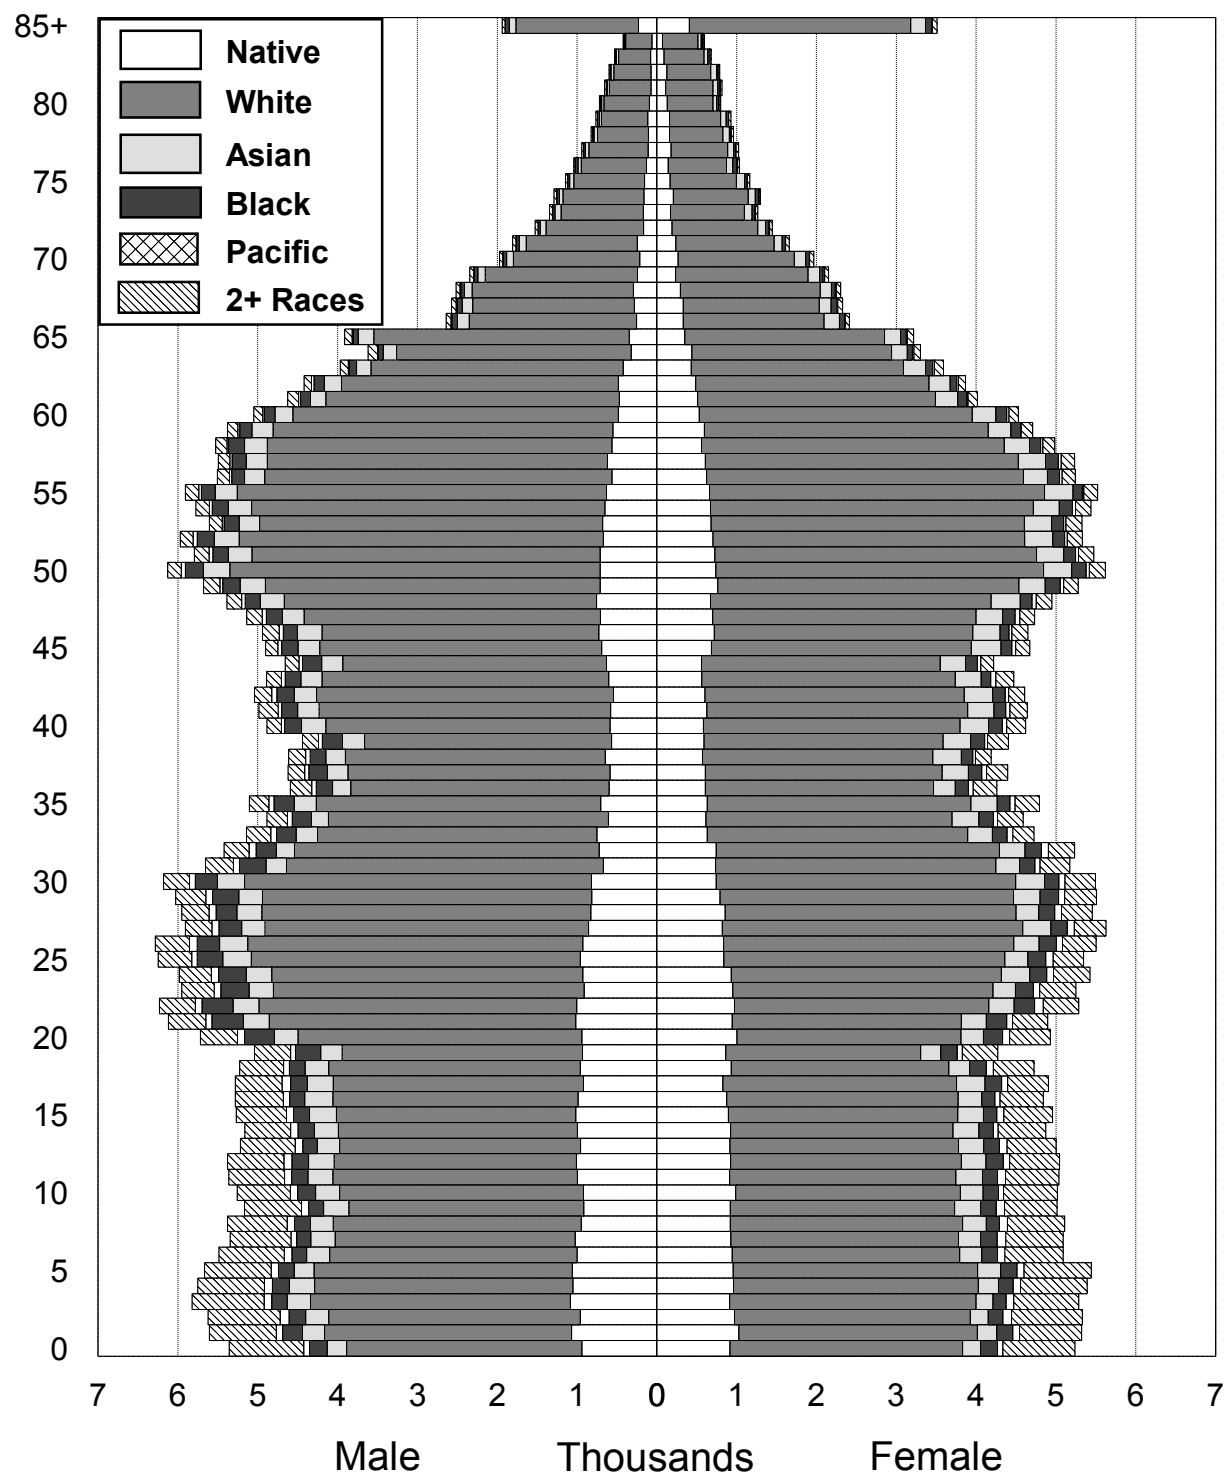

Alaskans ages 65 and older numbered 63,832 in 2012, and the current size of Alaska’s population aged 55 to 64 suggests

that the number of seniors will increase dramatically over the next decade. The 65-plus age group increased from 7.7 percent of the state total in 2010 to 8.7 percent in 2012.

The growth rate between 2010 and 2012 for this group in Alaska was higher than that of any other state in the nation — but as of 2012, Alaska’s share of residents aged 65-plus remained smaller than that of any other state. (For the U.S. as a whole, 13.7 percent of residents were 65 or older.)

Median Age

Alaska’s population is younger than the national average but the gap is narrowing, largely due to the aging of Alaska’s large baby boomer population. (See Figure 1.5.) The U.S. median age in 2012 was 37.4 years, and the median age for Alaska was 34.1. Alaska had the fourth-youngest population in the U.S. in 2012 after Utah (29.9), the District of Columbia (33.6), and Texas (33.9). In 2010, the U.S. median age was 37.2, and Alaska’s was 33.8.

By race, the median ages of Alaskans in 2012 were: 37.8 for white alone, 28.5 for American Indian and Alaska Native alone, 30.1 for African American alone, 35.4 for Asian alone, 24.5 for Hawaiian and Pacific Islander alone, and 17.8 for people of two or more races. The median age of people of Hispanic origin was 25.7.

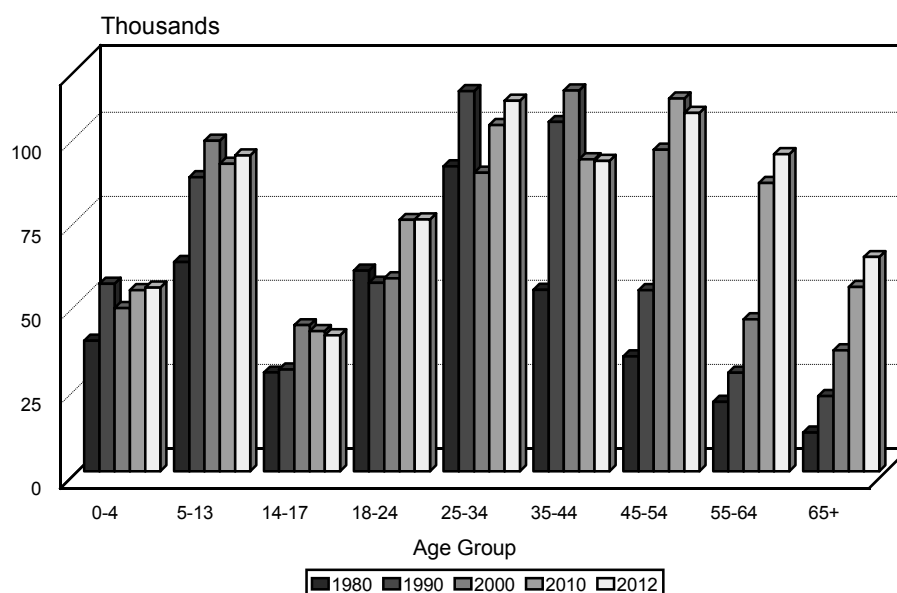

The Alaska Native population is generally somewhat younger because of higher birth rates and a smaller baby boomer population. The Hawaiian and Pacific Islander and Hispanic populations are younger due to a combination of birth rates and the age and year of migration for the share who moved to Alaska. The African American population is relatively young because a large share is military. The extremely young age of those of two or more races is the result of an increasing proportion of multiracial children, and perhaps a greater tendency of younger Alaskans who are multiracial to identify as such.

Voting Age Population

As of July 1, 2012 the voting age population (those 18 and over) in Alaska totaled 542,898. Of that population, the white alone group totaled 386,531 (71.2 percent), Alaska Native alone was 73,487 (13.5 percent), Asian alone made up 31,598 (5.8 percent), African Americans numbered 20,199 (3.7 percent), Hawaiians and Pacific Islanders were 5,325 (1.0 percent), and people of two or more races totaled 25,758 (4.7 percent). An estimated 29,154 (5.4 percent) voting-aged Alaskans were of Hispanic origin in 2012. (People of Hispanic origin can be of any race.)

Alaska had 506,434 registered voters as of October 2012, equivalent to 93.3 percent of the voting age population. While Alaska attempts to purge voter registration rolls, a 14

percent gross migration each year means that the number of people on the registers is not a clear measure of the proportion of eligible voters who are registered. Approximately 55.6 percent of the voting age population voted in the presidential election in 2012. Chapter 3 gives more detailed population data by election district.

Dependency

Dependency ratios give the ratio of the working-age population (ages 18 to 64) to the young and old largely nonworking populations. In 2012, for every 100 Alaskans aged 18 to 64 there were 39.5 Alaskans under 18 (down slightly from 40.0 in 2010), and 13.3 Alaskans over 65 (up from 11.7 in 2010), for a total dependency ratio of 52.9.

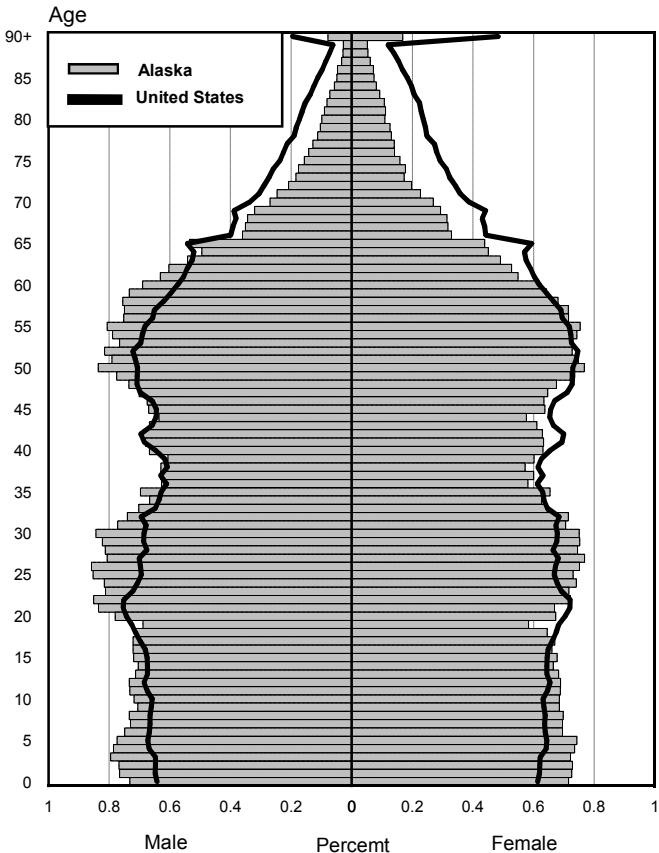

To compare, the U.S. as a whole had 37.4 children and 21.9 seniors for every 100 people of working age in 2012, for a total dependency ratio of 59.3. For 100 people in Alaska who reported being American Indian or Alaska Native alone in 2012, the total dependency ratio was 64.9, in contrast to 46.5 for white alone.

Male-to-Female Ratio

The ratio of males to females in Alaska as of 2012 was 107.6 males for every 100 females. By race, the male-to-female ratio was 110.9 for white alone, 101.1 for American Indian or Alaska Native alone, 124.2 for African American alone, 88.8 for Asian alone, and 102.2 for Hawaiian or Pacific Islander alone. The particularly high male-to-female ratio for African Americans reflects the large share of Alaska’s African American population in the military. Alaska’s male-to-female ratio for people of Hispanic origin was 108.1 in 2012.

States with younger populations tend to have higher male-to-female ratios, in part because the ratio at birth is typically around 105 and also because life expectancy is generally lower for males, so the ratio decreases at higher ages. Employment can also affect male-to-female ratios for certain areas, such as the military, fishing, and mining in Alaska. Other states that had high male-to-female ratios as of the Census Bureau’s 2012 population estimates were North Dakota (104.5), Wyoming (103.2), and Nevada (101.6).

Figure 1.5
Alaska and U.S. Population by Age and Sex, 2012
(Percent Distribution)

Sources: U.S. Census Bureau; and Alaska Department of Labor and Workforce Development, Research and Analysis Section

While Alaska had very large male-to-female ratios at some points in its history (including the gold rush era and during large military buildups) and it continues to have the highest ratio in the nation, the difference is sometimes exaggerated. Some communities in Alaska tend to be more heavily male due to local industries, but most have ratios that are not dramatically different from the U.S. average.

As shown in Figure 1.6, the highest ratio of males to females in Alaska as of 2012 was for the 20-to-24-year-old group, at 116.4. Ages 60-64 are close behind with a ratio of 112.7. The relatively high male-to-female ratio at higher ages in Alaska reflects historical patterns of migration.

Alaska Households and Living Arrangements

The Census Bureau counts all people as living either in a household or a “group quarters” facility (a shared living facility such as a dormitory or prison). An occupied housing unit is a household. The Census Bureau defines a housing unit as a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied (or if vacant, is intended for occupancy) as separate living quarters.

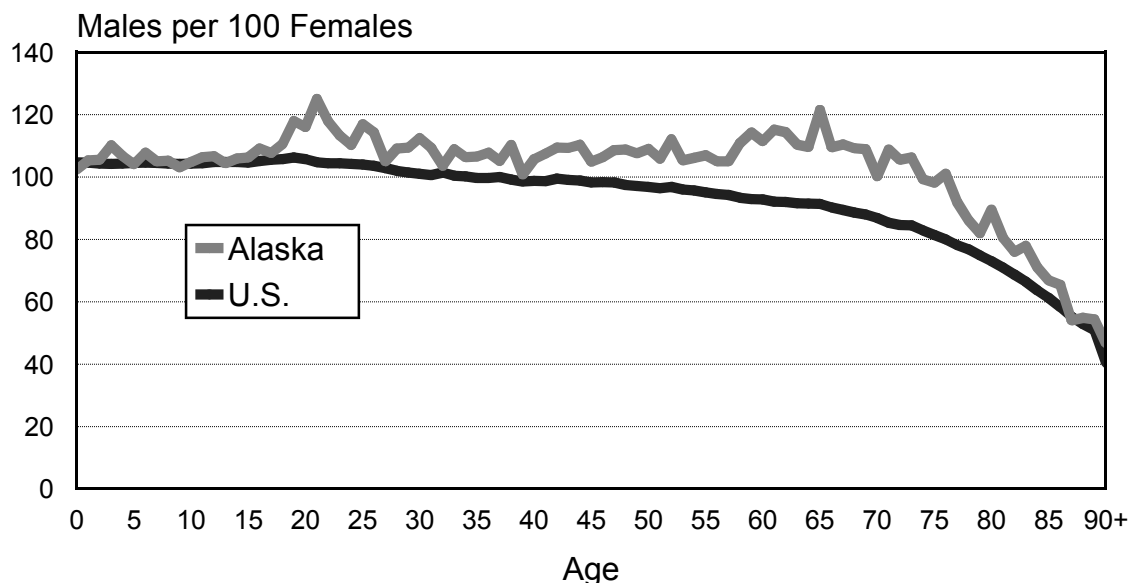

In 2012, Alaska had an estimated 308,915 housing units, with 259,858 occupied and 49,057 vacant. In 2010, the census

counted 306,967 housing units, with 258,058 occupied and 48,909 vacant. Of all housing units in the 2010 Census, 27,901 — or 9.1 percent — were for seasonal, recreational, or occasional use.

Total housing units increased by 1,948 between 2010 and 2012, or an increase of 0.6 percent. The number of occupied housing units (households) in Alaska increased by 1,800, or 0.7 percent, over the two-year period. The number of people per household in Alaska increased by 0.06, from 2.65 in 2010 to 2.71 in 2012. Among Alaska households, 36.1 percent, or 93,877, had one or more people under 18 in 2012, and 45,943, or 17.7 percent, had one or more people age 65 or more. (See Table 1.5.)

All people not living in households live in group quarters, which are in two general categories: (1) institutionalized (such as prisons, nursing homes, psychiatric hospitals, and residential treatment facilities) and (2) others in group quarters (such as group homes, college dorms, military barracks, fish processing and logging camp bunkhouses, and emergency shelters). In 2010, 26,352 people (3.7 percent of the state) lived in group quarters. In 2012, 27,568 people (3.8 percent) lived in group quarters.

Chapter 2

Alaska Boroughs and Census Areas

Introduction

This chapter presents detailed estimates of population by age, race, and sex for Alaska's boroughs and census areas. It also provides comprehensive analysis of geographic variation for population trends, households, components of change, and population composition.

Boroughs and Census Areas

As of July 1, 2012, the state had 18 organized boroughs. Boroughs in Alaska are the equivalent of counties in the rest of the United States. The three types of boroughs vary by the services they provide and their relationships with city governments. The Municipality of Anchorage, the City and Borough of Juneau, the City and Borough of Sitka, and the City and Borough of Wrangell are unified home rule municipalities, where the city government and borough government are merged. Petersburg Borough incorporated in January 2013 and will be included in the 2013 population estimates.

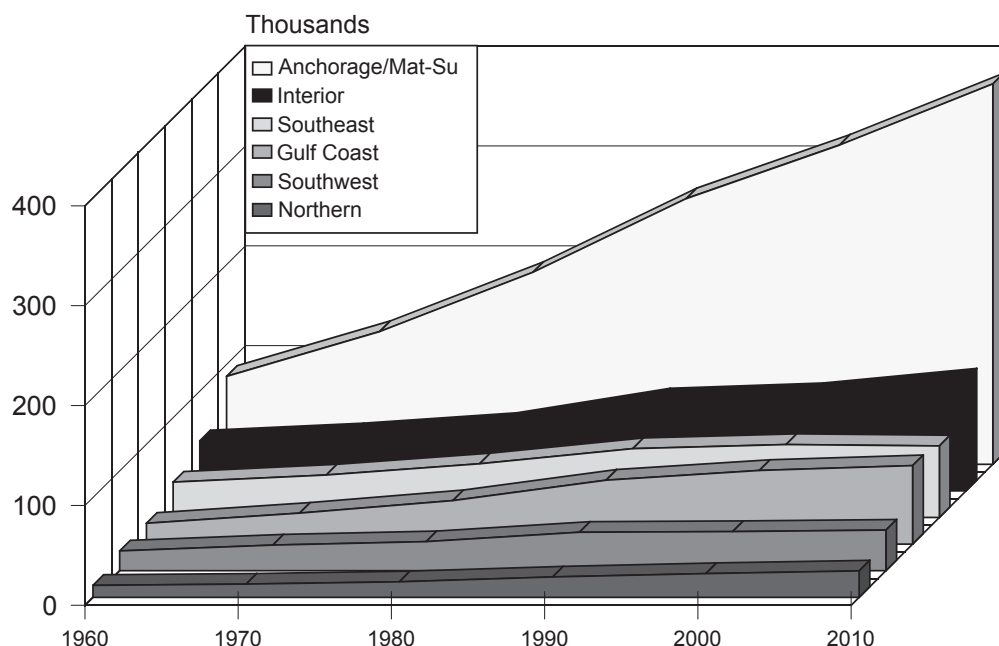

The other two classes of boroughs are distinguished by the level of services they are mandated to provide. These remaining 14 boroughs are not unified, and though most contain organized cities within the borough boundaries, some do not. Bristol Bay Borough, Haines Borough, the Municipality of Skagway Borough, and the City and Borough of Yakutat contain no incorporated cities.

The U.S. Census Bureau divides the remaining unorganized territory, which accounts for about 57 percent of the state's land area, into 11 census areas, for statistical purposes. Although these are only statistical units, the federal government considers them county equivalents. Many of the boundaries of the census areas tend to follow Alaska Native Regional Corporation (ANRC) and Regional Educational Attendance Area (REAA) boundaries. All of the census areas contain incorporated cities.

Because of new borough formations and boundary changes over the years, it is not always possible to make direct historical comparisons for the boroughs and census areas. Maps of the boroughs and census areas at the time of each census are available upon request and are also on the Alaska Department of Labor and Workforce Development's Research and Analysis Web site (laborstats.alaska.gov).

There were a few major boundary changes for boroughs and census areas in the late 2000s. In 2007, the Municipality of Skagway was formed out of part of the Skagway-Hoonah-Angoon Census Area. The remaining area is called the Hoonah-Angoon Census Area. The City and Borough of

Figure 2.1
Population by Alaska Region, 1960 to 2010

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Wrangell was formed in 2008 out of Wrangell-Petersburg Census Area and part of the former Prince of Wales-Outer Ketchikan Census Area. The remainder of the former Wrangell-Petersburg Census Area was renamed Petersburg Census Area.

The Ketchikan Gateway Borough annexed what remained of the Outer Ketchikan Census Subarea in 2008. The Prince of Wales-Outer Ketchikan Census Area was renamed Prince of Wales-Hyder Census Area. All numbers presented here are based on the Census Bureau's 2012 geographic boundaries.

Population Trends

Alaska's growth was strong but varying over recent decades, mostly centered in the more urban areas. This is evident in Figure 2.1, which shows the massive size of the Anchorage/Matanuska-Susitna region compared to other labor market regions since statehood. (See Figures 2.1 to 2.3 and Table 2.1.)

In 2012, 79.6 percent of Alaska's population was in the following five boroughs: Municipality of Anchorage (40.8), Fairbanks North Star Borough (13.7), Matanuska-Susitna Borough (12.8), Kenai Peninsula Borough (7.8), and City and Borough of Juneau (4.5). Figure 2.2 compares the growth rates of these boroughs by decade back to the 1960s.

Population growth in Alaska has been uneven in the last 30 years. Between 1980 and 1985, the state grew at an aver-

age annual rate of 5.9 percent. During the economic bust between 1985 and 1990, the state only grew 0.3 percent annually. For the 1990 to 1995 period, Alaska grew at a 1.8 percent annual rate and for the 1995 to 2000 period, the average annual growth rate slowed to 0.9 percent. From 2000 to 2005, growth was steady at 1.2 percent per year, then picked up toward the end of the decade to reach 1.3 percent annually between 2005 and 2010.

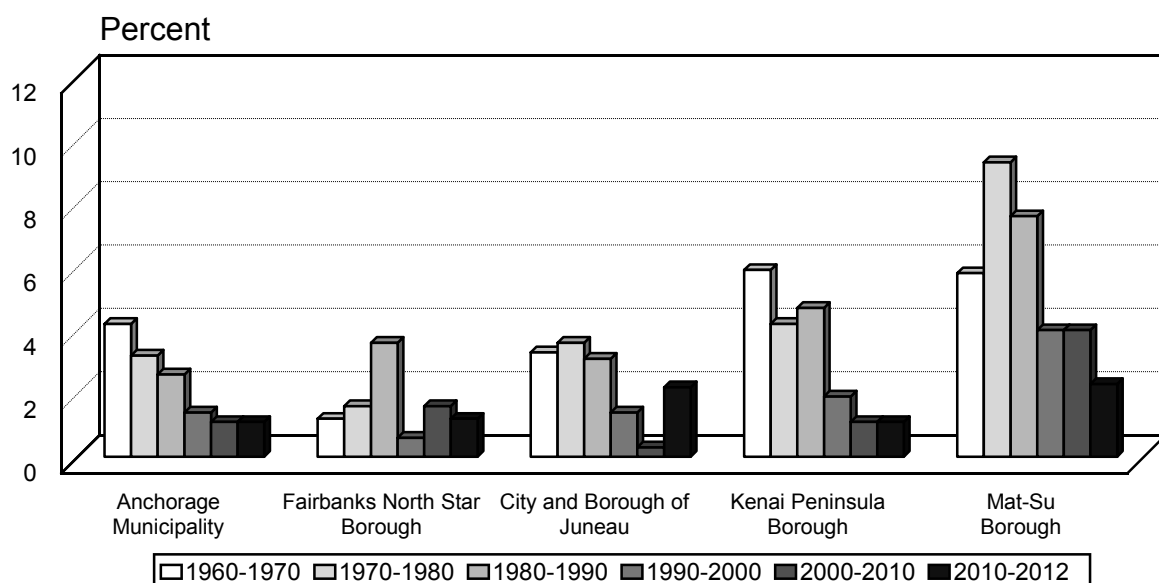

The state's population increased by 1.4 percent on average each year from 2010 to 2012. The majority of the growth was in the Anchorage/Matanuska-Susitna region, though the Aleutians West Census Area's rate was fastest at an average of 2.5 percent annually during the past two years — nearly two times faster than the statewide average. Population growth was also strong in the Matanuska-Susitna Borough (2.3 percent), the City and Borough of Juneau (2.2 percent), and the Haines Borough (1.9 percent).

In contrast, three of Alaska's boroughs or census areas lost population on an average annual basis between 2010 and 2012. The boroughs with population losses were the City and Borough of Yakutat (-2.8 percent), Bristol Bay Borough (-0.4 percent), and Municipality of Skagway (-0.3 percent).

Population Density

Overall, Alaska's land area is 16.1 percent of the entire United States. In 2012, Alaska averaged 1.28 people per square mile, in contrast to 88.9 people per square mile nationally. These numbers can be misleading, however,

Figure 2.2
Average Annual Growth Rate, Selected Boroughs, 1960 to 2012

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

because of the high rates of federal, state, and Native ownership in addition to other land use and physical accessibility issues.

The Municipality of Anchorage’s population density was highest in Alaska in 2012, with roughly 175.3 people per square mile. Anchorage was followed by Fairbanks North Star Borough at 13.7 people per square mile and the City and Borough of Juneau with 12.2. The lowest population density was in Alaska’s Interior Region, with the Yukon-Koyukuk Census Area having 0.04 people per square mile. Fifteen boroughs and census areas had population densities of less than one person per square mile.

Some borough and census area populations are limited to small parts of their total area, so population density of settled areas may be considerably higher than that of official boundaries. For example, most of the population of the Matanuska-Susitna Borough is concentrated in the area between the Matanuska and Little Susitna rivers. Population density in that area would be much greater than the approximately four people per square mile for the entire borough.

Group Quarters

As Chapter 1 describes, the Census Bureau recognizes two general categories of group quarters facilities: institutional (such as prisons, nursing homes, or military barracks) and noninstitutional (such as rooming houses, group homes, college dorms, emergency shelters, or logging and fish processing bunk houses).

In 2012, an estimated 27,568 people — or 3.8 percent of Alaska’s population — lived in group quarters, up slightly from 26,352 people or 3.7 percent in 2010. Table 2.2 provides housing and group quarters data for all boroughs and census areas.

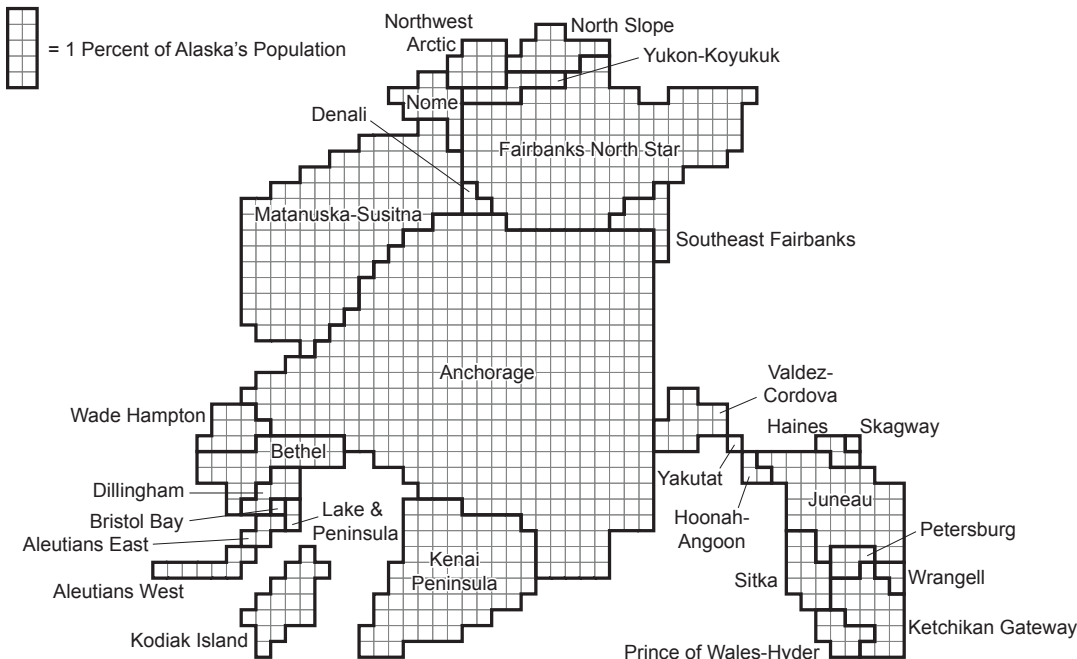

In 2012, approximately 49 percent of Alaska’s group quarters population lived in the Municipality of Anchorage and Fairbanks North Star Borough. Military barracks, University of Alaska dormitories, State of Alaska correctional facilities, a combination of profit and nonprofit group homes and nursing homes, and homeless shelters made up the population of group quarters in more populated areas.

The Aleutians East Borough and Aleutians West Census Area continue to have very large group quarters populations connected with fishing and the seafood processing industry, with 50 percent of their combined total population in group quarters in 2012. The Aleutians East Borough had the greatest proportion at 55.9 percent, followed by the Aleutians West Census Area (46.9 percent). The statewide average was 6.4 percent in 2012.

The North Slope Borough had an estimated 2,652 people (27.3 percent of its total population) in group quarters in 2012. This was primarily due to 2010 Census counts of employees at remote work sites in the borough who were not counted at the sites in past censuses.

Other areas in the state with relatively high proportions of group quarters population were Southeast Fairbanks Census

Figure 2.3
Map of Total Population Size by Borough and Census Area, 2012

Sources: U.S. Census Bureau; and Alaska Department of Labor and Workforce Development, Research and Analysis Section

Area (5.3 percent), Northwest Arctic Borough (4.9 percent), Fairbanks North Star Borough (4.8 percent), Municipality of Skagway (3.3 percent), and Kenai Peninsula Borough (3.1 percent).

Group quarters in Southeast Fairbanks Census Area and Fairbanks North Star Borough are largely military. Fairbanks North Star Borough is also home to a large number of college students in dormitories. A state-run Pioneer's Home and the Coast Guard contribute to the group quarters population in Sitka, and mining accounts for the group quarters population in Northwest Arctic Borough.

Housing Units and Households

A household includes all people who occupy a housing unit, which can be a house, an apartment, a mobile home, a group of rooms, or a single room that is occupied as separate living quarters. Tables 2.2 through 2.4 provide housing and household data for Alaska boroughs and census areas.

The number of households (occupied housing units) in Alaska in 2012 was estimated at 259,858, an increase of 1,800 or 1 percent since 2010. The state's number of people per household increased slightly, from 2.65 in 2010 to 2.71 in 2012.

Areas associated with larger household sizes are in the northern and western regions of the state. In 2012, these areas included Wade Hampton Census Area, with an average

of 4.19 people per household, followed by Northwest Arctic Borough (3.74), Bethel Census Area (3.48), North Slope Borough (3.39), and Nome Census Area (3.24).

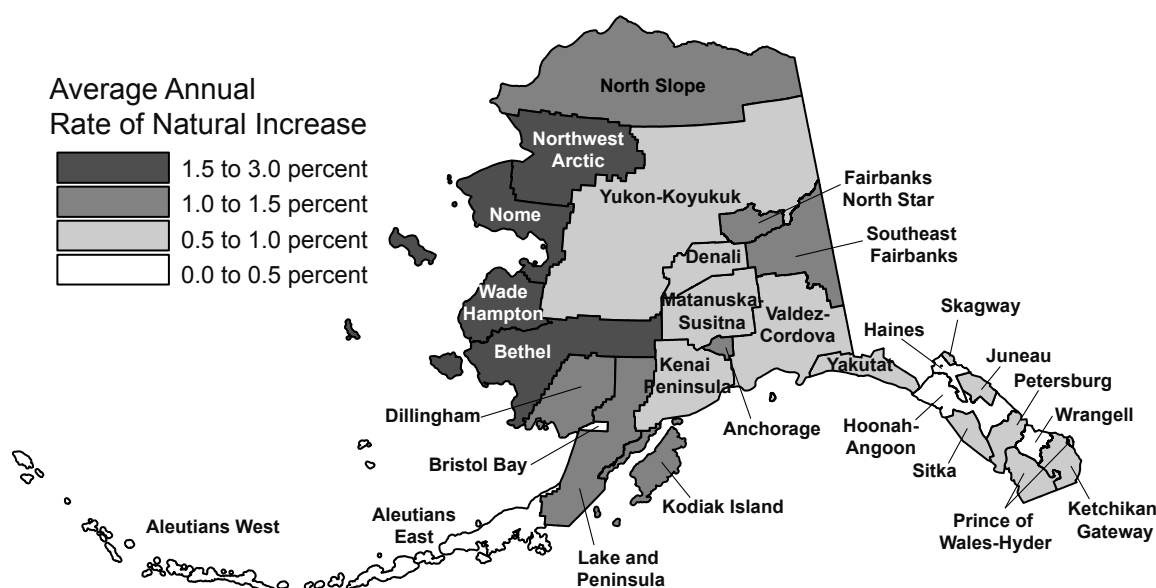

The smallest households were in the Municipality of Skagway (2.06), followed by Bristol Bay Borough (2.17), Denali Borough (2.19), Haines Borough (2.22), and Hoonah-Angoon Census Area (2.29). Southeast Alaska is well-represented on the list of small household sizes, as the population there tends to be older and more households no longer contain children.

Components of Population Change

Population change has two parts: natural increase, which is births minus deaths; and net migration, which is in-migration minus out-migration. Statistics for these are presented in Table 2.5. It also includes birth and death rates and the proportion of Alaska's total population for each area. (See Figures 2.4 and 2.5.)

The major population centers had the largest total population increases over the last decade, with the largest numerical increase in the Municipality of Anchorage between April 2010 and July 2012 of 7,016 people. Anchorage was followed by the Matanuska-Susitna Borough (+4,806), Fairbanks North Star Borough (+2,762), City and Borough of Juneau (+1,557), and Kenai Peninsula Borough (+1,356). The areas that lost net population between 2010 and 2012 included City and Borough of Yakutat (-40), Bristol Bay Borough (-10), and the Municipality of Skagway (-7).

Figure 2.4
Average Annual Natural Increase by Borough and Census Area, 2010 to 2012

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Births and Deaths

The April 2010 to July 2012 average annual birth rate for Alaska was 1.6 births per 100 people, equal to the average annual birth rate for 2000 to 2010, which is above the national rate of 1.3 births per 100 for the 2010-2012.

The highest birth rates were in areas of the state with higher-than-average numbers of Alaska Natives. The Wade Hampton Census Area had the highest annual birth rate for 2010-2012, at 3.3 births per 100 people. Other areas with high birth rates between 2010 and 2012 included Nome Census Area (2.6 per 100), Northwest Arctic Borough (2.6 per 100), and Bethel Census Area (2.5 per 100).

Birth rates in the state were lowest in the Aleutians and Southeast Alaska. The Aleutians East Borough and the Aleutians West Census Area, where nearly two-thirds of the population are male (many of whom work in fishing or fish processing) had average annual birth rates of 0.6 per 100 and 0.5 per 100, respectively, for 2010 to 2012. The lower-than-average birth rates in Southeast Alaska are related to the relatively high age of the population there.

Alaska's average annual death rate was 0.5 per 100 people for April 2010 to July 2012. This was the same as the rate between 2000 and 2010. The death rate is closely related to age, and as Alaska's median age increases over time, its death rate should increase as well.

The borough/census area with the lowest death rate in the state in 2010 to 2012 was the Aleutians East Borough,

which had an average annual rate of 0.2 deaths per 100 people for two year period. Other areas with low death rates included the Aleutians West Census Area with 0.2 deaths per 100 people, Denali Borough (0.3 per 100), and the Municipality of Skagway (0.4 per 100). The state's highest death rates were in the Yukon-Koyukuk Census Area (1.0 per 100), Bristol Bay Borough (0.9 per 100), and the City and Borough of Wrangell (0.9 per 100).

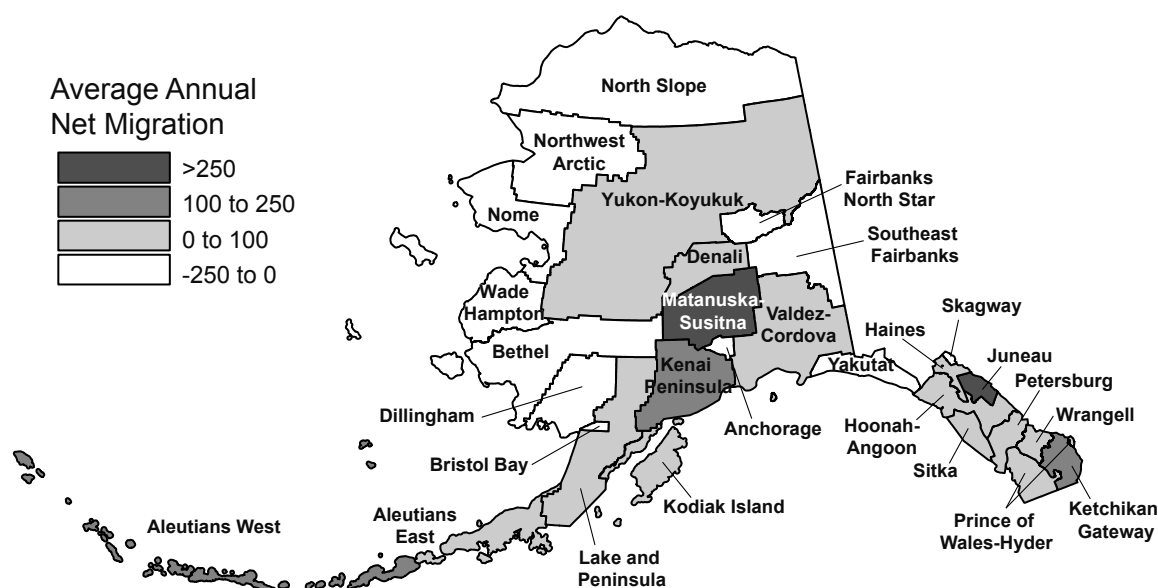

Migration

Migration is made up of both in-migration and out-migration flows. The difference between in- and out-migration for a given place is referred to as net migration. The total volume of population turnover due to migration (in-migration and out-migration) is called gross migration.

Though Alaska hasn't had dramatic net migration gains in the past couple decades, it has one of the highest rates of population turnover due to migration in the nation. Within the state, particularly to and from the state's major population centers, there are large migration flows as well.

The highest average annual rate of net migration (or rate of change in population size due to migration) for 2010 to 2012 was in the Aleutians West Census Area (2.2 percent). Other areas with high rates of net migration included the Haines Borough at 1.7 percent of total population per year, City and Borough of Juneau (1.5 percent), Matanuska-Susitna Borough (1.4 percent), and City and Borough of Wrangell (1.3 percent).

Figure 2.5
Average Annual Net Migration by Borough and Census Area, 2010 to 2012

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

The boroughs and census areas with the highest rates of loss due to net migration for 2010 to 2012 include the City and Borough of Yakutat at 3.5 percent of total population per year, Wade Hampton Census Area (1.0 percent), Municipality of Skagway (1.0 percent), and Northwest Arctic Borough (0.9 percent). Some areas have high rates of population loss due to net migration but maintain their overall population size through natural increase.

Proportion Alaska Native

Boroughs and census areas in the Southwest, Northern, and Interior regions have the highest proportions of Alaska Natives. (See Figure 2.6.)

As described in Chapter 1, respondents were able to select more than one race on the 2000 and 2010 Census forms, so there are at least three measures of population by race: race alone, race alone or in combination with other races, and “bridged-race.” Bridged-race data — which are available by age, sex, and borough/census area on the Research and Analysis Web site (laborstats.alaska.gov) — provide estimates for population by race in which all respondents are assigned a single race.

Also, tables noted “modified race data” in this publication include the adjustment for “some other race” (described in Chapter 1), and those without that note do not have the adjustment.

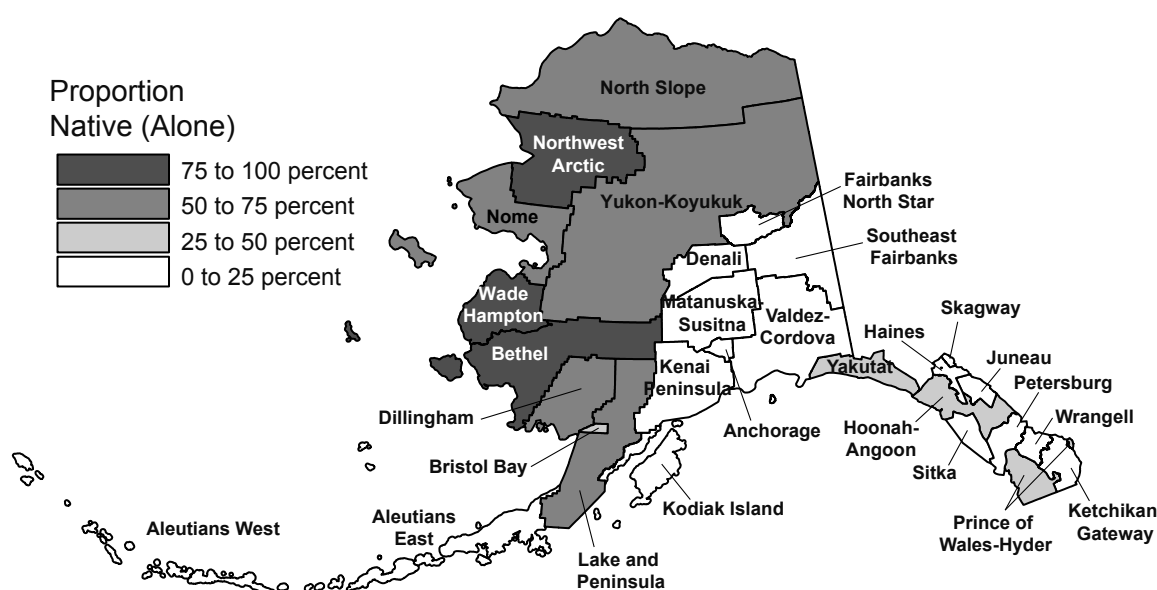

The Municipality of Anchorage had the largest number of Alaska Natives alone (24,306) among the boroughs and census areas in 2012. The share of Anchorage’s total population that was Alaska Native was relatively low, though, at just 8.1 percent — down slightly from 2010 (8.2 percent). (See Tables 2.6, 2.7, and 2.8.)

The borough/census area with the second-largest Alaska Native alone population in 2010 was Bethel Census Area (14,339). The five boroughs/census areas with the highest numerical increases in residents reporting their race as Alaska Native alone between 2010 and 2012 were the Matanuska-Susitna Borough (+488), Municipality of Anchorage (+431), Bethel Census Area (+214), Fairbanks North Star Borough (+203), and Nome Census Area (+104).

In 2012, 48,838 (45.2 percent) of Alaska Natives (alone) lived in areas that were more than half Native. That share in 2010 was higher, at 45.4 percent. Because of migration from rural to urban areas, the proportion of the Alaska Native alone population living in boroughs that were less than 10 percent Alaska Native alone grew to 38.4 percent in 2012, up from 38.0 percent in 2010.

Boroughs/census areas that were less than 10 percent Alaska Native alone in 2012 included Haines Borough (9.5 percent), Municipality of Anchorage (8.1 percent), Kenai Peninsula Borough (7.3 percent), Fairbanks North Star Borough (7.2 percent), Matanuska-Susitna Borough (5.8 percent), Municipality of Skagway (4.3 percent), and Denali Borough (4.0 percent).

Figure 2.6
Proportion Alaska Native (Alone) by Borough and Census Area, 2012

Sources: U.S. Census Bureau; and Alaska Department of Labor and Workforce Development, Research and Analysis Section

Male-to-Female Ratio

The male-to-female ratio is the number of males per 100 females. In 2012, there were 107.6 males for every 100 females statewide. The boroughs and census areas with the highest male-to-female ratios were Aleutians West Census Area (209.4 males per 100 females), Aleutians East Borough (202.7), North Slope Borough (165.8), Denali Borough (126.5), Bristol Bay Borough (124.3), Southeast Fairbanks Census Area (124.0), and Prince of Wales-Hyder Census Area (121.5). Many of these areas have large fishing and seafood processing industries as well as military and mining, which all contribute to higher male-to-female ratios. (See Table 2.9.)

The boroughs and census areas with the lowest average male/female ratios were the City and Borough of Sitka (99.8), Haines Borough (100.5), Municipality of Anchorage (102.4), City and Borough of Juneau (103.3), and Ketchikan Gateway Borough (104.6). In general, urban areas and areas with older populations tend to have lower male-to-female ratios.

Median Age

Alaska's median age was estimated at 34.1 as of July 1, 2012, an increase from the 2010 median age of 33.8. As discussed in Chapter 1, Alaska's population is aging, in line with the trend throughout the United States. The U.S. median age was 37.4 in 2012, up from 37.2 in 2010.

The areas of Alaska with the highest median age as of 2012 were Wrangell Borough (46.7), Haines Borough (46.6 years), Hoonah-Angoon Census Area (46.2), Municipality of Skagway (43.0), Aleutians East Borough (42.7), Bristol Bay Borough (42.6), Denali Borough (42.3), City and Borough of Yakutat (42.1), Petersburg Census Area (41.8), and Kenai Peninsula Borough (41.4).

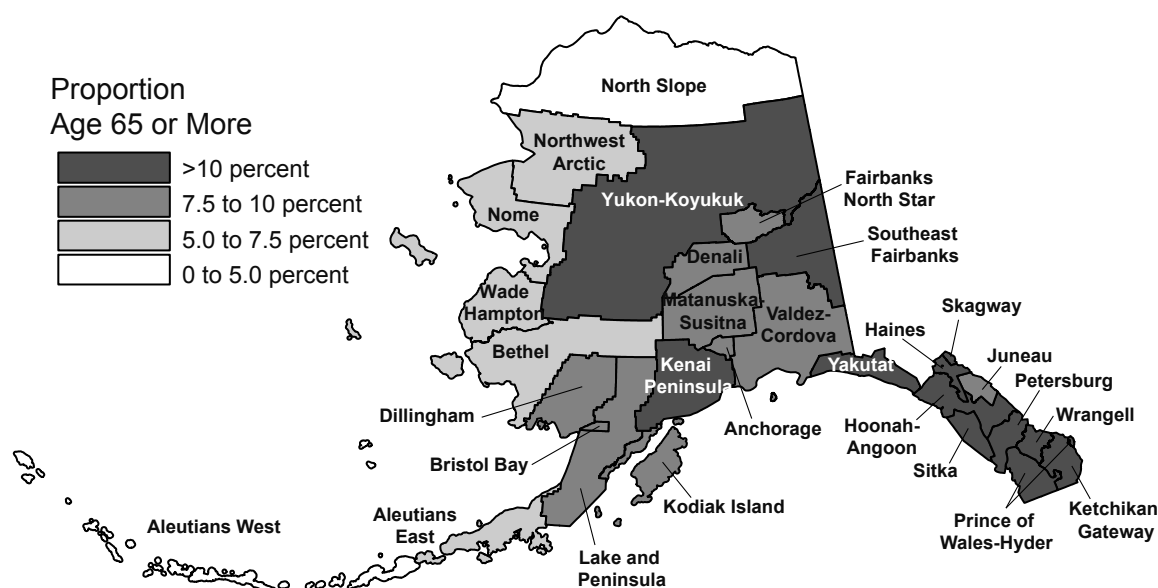

The youngest median ages in 2012 were in the Northern and Southwest regions of the state. These areas included Wade Hampton Census Area (22.6 years), Northwest Arctic Borough (26.2), Bethel Census Area (26.6), Nome Census Area (27.6), and Dillingham Census Area (29.3).

The largest increases in median age between 2010 and 2012 were in City and Borough of Yakutat (+2.4 years) and Municipality of Skagway (+1.6). The largest decreases in median age were found in North Slope Borough (-1.0 years) and Valdez-Cordova Census Area (-0.9).

Seniors

The proportion of the population ages 65 and older was 8.7 percent in 2012. The older population had steadily increased from 2.9 percent in 1980 to 4.0 percent in 1990 to 5.7 percent in 2000 and 7.7 percent in 2010. Although Alaska still has the smallest percentage of people over 65, it is following the nationwide aging trend.

Figure 2.7
Proportion Age 65 or More by Borough and Census Area, 2012

Sources: U.S. Census Bureau; and Alaska Department of Labor and Workforce Development, Research and Analysis Section

Some Alaska boroughs and census areas had a larger concentration of older Alaskans than others. Southeast had the greatest proportion of elders. The City and Borough of Wrangell led with 16.9 percent, followed by Haines Borough with 15.8 percent, Hoonah-Angoon Census Area with 14.9 percent, and Petersburg Census Area with 13.1 percent. (See Figure 2.7 and Table 2.9.)

Other Southeast areas with a higher-than-average percentage of older residents were City and Borough of Sitka (12.8 percent), City and Borough of Yakutat (12.5 percent), Municipality of Skagway (11.9 percent), Prince of Wales-Hyder Census Area (11.5 percent), and Ketchikan Gateway Borough (11.3 percent).

Areas outside of Southeast with increasingly large shares of seniors were Kenai Peninsula Borough (12.9 percent), Yukon-Koyukuk Census Area (11.2 percent), Southeast Fairbanks Census Area (10.3 percent), Valdez-Cordova Census Area (8.9 percent), and Matanuska-Susitna Borough (8.8 percent).

The North Slope Borough, with its large group quarters population, had the lowest proportion aged 65 years and older in 2012, at 4.4 percent of the total population. Other areas with relatively few older Alaskans included the Aleutians West Census Area (5.0 percent), Wade Hampton Census Area (5.3 percent), and Aleutians East Borough (6.2 percent).

In 2012, 85.7 percent of Alaskans 65 and older lived in the following areas: Municipality of Anchorage (38.7 percent), Matanuska-Susitna Borough (13.0 percent), Fairbanks North Star Borough (11.8 percent), Kenai Peninsula Borough (11.5 percent), City and Borough of Juneau (4.8), Ketchikan Gateway Borough (2.5), City and Borough of Sitka (1.8), and Bethel Census Area (1.7). Many seniors may choose or need to live in more urban areas, where medical care and other necessities are more accessible.

Chapter 3

Special Populations and Areas

Introduction

This chapter includes frequently requested estimates of the populations of military, legislative districts, school districts, Alaska Native Regional Corporations, Alaska Native Village Statistical Areas, and areas of Canada that are adjacent to Alaska.

Armed Forces

In 2012, the number of active duty military personnel was 22,438, and they had 36,565 dependents. (See Table 3.1.) Three of the service branches make nearly all of the military population in Alaska: Army, Air Force, and Coast Guard.

As of 2012, most of the military population was Army (58.9 percent). (See Figure 3.1.) Alaska's Army bases are in Anchorage (Joint Base Elmendorf-Richardson), Fairbanks (Fort Wainwright), and Delta Junction (Fort Greely).

Air Force service members represented 32.2 percent of Alaska's active duty residents in 2010. Alaska's Air Force bases are located in Anchorage (Joint Base Elmendorf-Richardson), Fairbanks (Eielson Air Force Base), and Denali Borough (Clear Air Station).

The Coast Guard made up 8.6 percent of Alaska's active duty military population in 2012. The majority of Alaska's Coast Guard bases are located along the coastline, including Anchorage, Cordova, Juneau, Kodiak, Petersburg, and Valdez. With the closure of Adak's naval air station in 1997, the Navy no longer maintains a significant presence in Alaska.

Boroughs and census areas with military bases can be significantly composed of military and dependent populations. For example, active duty military and dependents in Fairbanks North Star Borough (Eielson Air Force Base and Fort Wainwright) accounted for 22.2 percent of residents in 2012.

Legislative Districts

The Alaska Redistricting Board established the current House and Senate districts for the Alaska State Legislature in 2012. Overall, there are 40 House districts and 20 Senate districts in the state. Table 3.2 provides district population data for 2012. In 2010, the average population of the House district areas was 17,756, and the average for the Senate district areas was 35,512.

The table includes voter registration data for 2012 provided by the Alaska Division of Elections. The number of registered voters may be higher than the voting age population in areas with high population turnover due to the length of time it takes to clear voter registration rolls.

School Districts

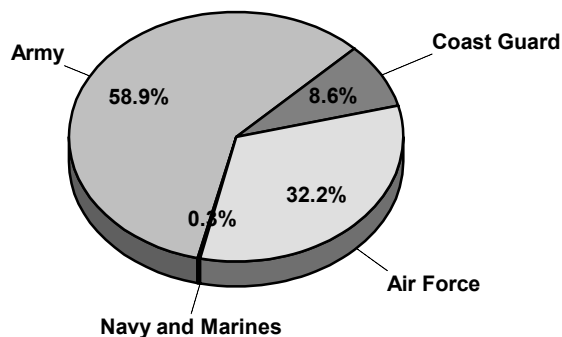

Table 3.3 shows the populations of Alaska school districts for 2010 and 2012. Of the 53 school districts in 2012, the Anchorage School District had the largest population, with 298,842 people. The district was home to 41 percent of the state's total population. Conversely, the Pelican School District had the fewest people. Only 82 people, or 0.01 percent of the state's total population, lived there.

Between 2010 and 2012, Alaska's school districts grew by 2.2 percent on average. The five fastest-growing school districts were Southeast Island (9.1 percent increase), Unalaska (9.0 percent), Nenana City (7.9 percent), Kake City (7.4 percent), and Klawock City (5.8 percent).

Canadian Areas Adjacent to Alaska

Alaskans visiting or conducting business with the government of Canada or its people frequently use information on areas and communities that are adjacent to Alaska. Table 3.4 includes population figures for selected areas and communities in Yukon Territory and along the border of British Columbia, taken from Statistics Canada's 2006 and 2011 Censuses. The areas in British Columbia (56,774 people) and the Yukon (33,897) adjacent to Alaska contained 90,671 people as of 2011, compared to the 59,393 population of Southeast Alaska in 2012.

Active Duty Military Population in Alaska by Service Branch, 2012

Source: Defense Manpower Data Center

Alaska Native Regional Corporations

The Alaska Native Claims Settlement Act of 1971 created 12 in-state Alaska Native Regional Corporations (ANRCs) that cover the entire state except for the Annette Island Reserve, which is Alaska's only American Indian reservation. Table 3.5 shows population estimates for each regional corporation. The estimates are for the Alaska Native and American Indian population living within these regions, not shareholders.

The Alaska Native Regional Corporation areas with the largest numbers who were Alaska Native alone or in combination in 2010 were: Cook Inlet (53,052), Calista (22,320), Doyon (16,693), and Sealaska (16,102). Three of the 12 corporations had populations that were at least three-quarters Alaska Native: Calista (88.2 percent), NANA (85.4 percent), and Bering Straits (79.8 percent).

Alaska Native Village Statistical Areas

The Alaska Native Claims Settlement Act of 1971 also identified 209 Alaska Native villages. Populations for these villages were first reported in the 1980 Census. For the 1990 Census, the Census Bureau changed the name to Alaska Native Village Statistical Area (ANVSA) and worked with local officials to delineate boundaries.

ANVSA designations and boundaries change with each decennial census, and may have boundaries that are the same or different than those of cities or "census designated places" (a type of statistical area delineated by the U.S. Census Bureau). In the 2000 Census there were 208 ANVSAs and Tribal Designated Statistical Areas (a category that is no longer used), and as of the 2010 Census, there are 221. (See Table 3.6.)

Chapter 4

Alaska Places

Introduction

This chapter provides total population estimates through 2012 for Alaska places, including cities and “census-designated places” (CDPs). Cities include all 148 of Alaska’s incorporated places that existed as of the 2010 Census. CDPs are statistical areas delineated by the U.S. Census Bureau for the 2010 Census. CDPs have no legal status, but are based on local areas with population. All numbers presented here, including those for 2000, are based on 2010 Census geography.

Population by Size of Place

Figure 4.1 shows Alaska’s population by size of place, with separate listings for places with populations greater than and less than 2,500 people (formerly urban and rural). The largest individual places are listed in order of population size in Table 4.1. Population estimates by borough/census area and place for 2000, 2010, 2011, and 2012 are provided in Table 4.2. Table 4.3 gives an alphabetical listing of places and their 2000, 2010, 2011, and 2012 total population, as well as their 2010 Census Federal Information Processing Standard (FIPS) codes. Annual 2000 to 2012 population estimates for all places are available on the Research and Analysis Web site (laborstats.alaska.gov).

Thirty-eight places in Alaska had populations above 2,500 in 2012, and these were home to 80.4 percent of Alaska’s population. The Municipality of Anchorage — the state’s largest city — made up 40.8 percent of the overall population.

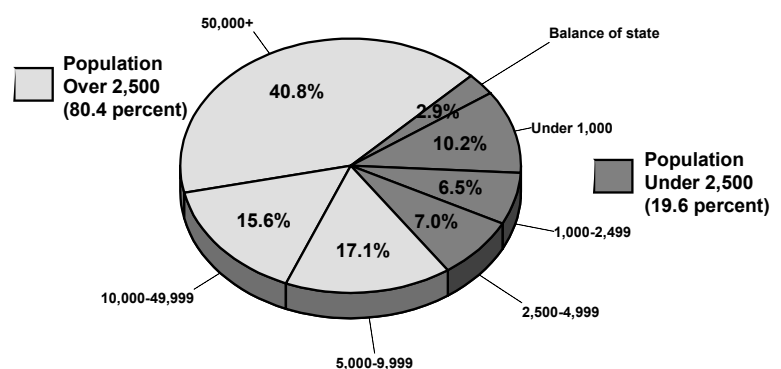

Alaska’s population living in the 317 places with less than 2,500 people made up 19.6 percent of the total population, and 2.9 percent of Alaskans resided outside any city or CDP. Most people living outside of a place were near a city or CDP, or along a road system in the Matanuska-Susitna Borough, Ketchikan Gateway Borough, Kodiak Island Borough, Kenai Peninsula Borough, Fairbanks North Star Borough, Yukon-Koyukuk Census Area, or Southeast Fairbanks Census Area.

Unorganized Territory

Slightly under three-fifths of Alaska’s land area lies outside of any incorporated city or borough. In this unorganized territory, the state performs all governmental functions. An estimated 19,951 people, or 2.7 percent of the state’s population, lived in such “unorganized” territory in 2012; in 2010 the population of these areas was 19,621. Back in 2000, 20,438 people, or 3.3 percent of the state’s population, lived in unorganized territory. The number of people in 1990 who lived in unorganized territory was 23,158, or 4.2 percent of the state’s population. A decade earlier in 1980, 20,000 people, or 5.0 percent of the state’s population, lived outside the structure of any sub-state government entity. The majority of people living in unorganized territory reside in a CDP.

The number of people who lived in unorganized territory and outside of CDPs in 2012 totaled 2,529, or 0.3 percent of the state’s overall population. The 2010 census counted 2,554 people in these areas. All but a few hundred of these people lived outside communities but along a road system which allowed them access to a community. Only a very small number lived as isolated individuals or individual families on islands or in remote Alaska with access to a community only by bush plane or small boat.
