Alaska Department of Labor

- 1 Alaska's Largest Private Employers in 1996
- 12 Alaska's Employment Scene Labor Market Positive Despite Restrained Growth

Employment Scene Tables:

- 14 Nonagricultural Wage and Salary Employment—Alaska and Anchorage
- 14 Hours and Earnings for Selected Industries
- 15 Nonagricultural Wage and Salary Employment in Other Economic Regions
- 16 Unemployment Rates by Region and Census Area

Printed and distributed by ASSETS*, a vocational training center and employment program.

Cover design by Jim Fowler

This publication, funded by the Department of Labor's Employment Security Division, was produced at a cost of \$.70 pper copy. The Trends 100:

Alaska's Largest Private Employers in 1996

By Neal Fried and Brigitta Windisch-Cole

or the sixth straight year, Carr Gottstein Foods, a grocery chain, heads the list of the state's largest private sector employers. (See Tables 1 and 3.) In 1996, Carr's provided an average of 3,299 jobs—the largest workforce ever recorded by one firm since the inception of this list in 1985. All other firms had at least a thousand fewer employees. The second and third largest employers were Providence Alaska Medical Center and Fred Meyer respectively—a slightly different lineup from last year. ARCO Alaska, which held the number two spot in 1995, slipped to fourth place as it continued to downsize.

Ten largest firms remain unchanged

The 10 largest employers in 1995 repeated at the top of the list in 1996, although there was a bit of shuffling among their ranks. Over the years, the top 10 list has remained relatively stable; six of the current top 10 employers were also in this group a decade ago. (See Table 3.) Some of the

changes reflect the evolution of Alaska's economy. In 1986, four oil industry firms made the top 10 list compared to three in 1996. Most of the oil industry firms' rankings have slowly migrated down the list.

Seven newcomers join the list

Although the *Trends* 100 list is relatively durable, seven new players were added this year. (See Table 4.) The newcomers represent a variety of industries and many reflect broad economic trends. For example, three of the new firms are tourism relat-

ed. They include Westours Motorcoaches, the Sheraton Anchorage Hotel and Sky Chefs, which prepares airline meals. Eagle Hardware and Garden is one of the recent national retail arrivals on the scene. Another newcomer, The Industrial Company, became one of the state's largest employers because of its work at the new Fort Knox gold mine in Fairbanks. Over the years, Norcon, an oil field service company, has moved off and on the list. In 1996, its employment numbers climbed because of contract work with utility companies. Finally, the Rural Alaska Community Action Program, a private nonprofit organization that provides a variety of services for rural Alaska, joined the cadre of *Trends* 100 employers.

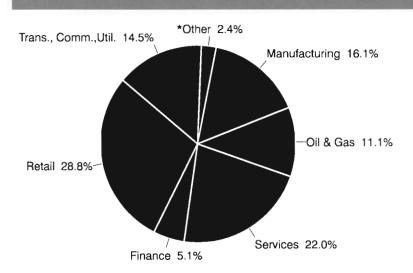

Neal Fried and Brigitta Windisch-Cole are labor economists with the Research and Analysis Section, Administrative Services Division, Alaska Department of Labor. They are located in Anchorage.

Big movers reflect changes in the economy

Many of the companies that climbed by 10 or more rankings are firms benefiting from changes in the economy. (See Table 5.) Nearly a third of

TOTAL TRENDS 100 EMPLOYMENT

57,539

Note:
Based on 1996
average
employment. Firms
with identical
employment ranked
by unrounded
employment.

Source: Alaska Department of Labor, Research and Analysis Section. these firms are either tourism related or are affected by that industry. These firms include Burger King, Alaska Hotel Properties (Princess Hotels) and Aramark Leisure Services, which runs hotels and concessions in Denali National Park and elsewhere. Their growing role among Alaska's largest employers is not surprising given the strong and uninterrupted growth in tourism. Chugach North Technical Services and Northwest Technical Services are both personnel supply firms. Growth in the use of contract labor and temporary help has been a boon to companies in that industry. Health care's growing influence in the economy is reflected by the improved ranking of Norton Sound Health Corporation and Valley Hospital. Laidlaw Transit grew from the acquisition of other bus companies, while the Doyon/Universal Ogden, Joint Venture, reflects the increasing weight of Native corporations in Alaska's economy.

Large employers employ more and pay better

Alaska's Trends 100 employed 22% of all wage and salary workers in the state and provided nearly a third of all private sector jobs. With few exceptions, over the past decade, employment for the Trends 100 grew faster than that of the entire private sector. In 1996, total employment among Alaska's largest employers did not budge, much like the overall wage and salary workforce. While many enterprises made moderate employment gains, nearly an equal number of these firms became a bit smaller.

In 1996, these 100 largest firms paid out \$2.1 billion in wages. The annual average wage paid by the *Trends* 100 was \$37,112. For the remainder of the private sector, the average annual wage

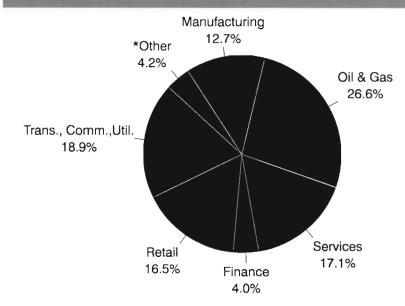

was \$30,382. One primary reason for the Trends 100's higher wages is the oil industry's influence. Unlike any other industry, oil industry employment is concentrated in larger firms. In 1996, 78% of all oil industry employees worked for Trends 100 firms. Because of their prominence, oil industry employers are responsible for 11.1% of the Trends 100 employment (See Figure 1.), although they represent only 4.3% of total private sector employment. Their influence on payroll is even larger because they pay much higher wages. A full 26.6% of the Trends 100 payroll comes from the oil industry. (See Figure 2.) In general, larger firms pay higher wages and, although benefits are not included in any of these numbers, they also tend to be more generous.

Native corporations are well represented

Several of the *Trends* 100 employers are either subsidiaries of firms owned by one of Alaska's regional Native corporations or are one of the many Native nonprofit organizations. (See Table 6.) Because the *Trends* 100 employers are organized by individual firm without consideration for partial or full ownership, the leadership role of the core regional Native corporations in Alaska's labor market is masked.

If the subsidiaries were merged

according to ownership, nearly all of the regional Native corporations would appear on the Trends 100 list. In spite of this definitional limitation, more than a dozen of the subsidiaries or other organizations made the list. The largest is Alaska Petroleum Contractors, an oil service company, with 1,103 employees and the state's 11th largest employer. It is a wholly owned subsidiary of Arctic Slope Regional Corporation. Alaska Petroleum Contractors moved onto the state's then Top 50 employer list in 1988 with an annual average employment level of 324. Today, it is one of the major players in the development of new oil fields on the North Slope. Cook Inlet Region Inc. (CIRI), the largest Native regional corporation, owns half of the Peak Oil Field Service Companv. Other Native-owned businesses include the Nana/Marriott, Joint Venture, and Doyon/ Universal Ogden, Joint Venture, that have a presence in the oil patch but also own and run hotels, employment services and other businesses. Many provide health care and social services. The largest is the Yukon Kuskokwim Health Corporation and not far behind is Fairbanks' second largest employer, the Tanana Chiefs Conference Inc. Because of compacting and the devolution of the federal government, these players will continue to grow as they take on more re-

1996

Continued on page 7

sponsibilities for delivering health and social services. In future years, more Alaska-Native-owned firms will likely join the *Trends* 100.

Nonprofits and health care are services' biggest players

Alaska's nonprofits are among the state's biggest employers. (See Table 7.) In fact, 14 of the Trends 100 are nonprofits, and they employ 14% of this workforce. This list grows longer nearly every year. In 1996, the addition was Rural Alaska Community Action Program. Most nonprofit organizations provide some kind of health care, social or educational services or a combination of the above. For example, Tanana Chiefs, the Salvation Army, ASSETS, Maniilaq, and Bristol Bay Native Association all provide a mixture of these services. The nonprofits' employment will grow as direct government services shrink and these organizations move in to fill the gaps. Welfare reform will provide some further impetus for growth, as will health care and a host of other services.

Health care is a big player in both the nonprofit and services industry. For example, Providence Alaska Medical Center is the second largest private sector employer in the state. Health care reigns so prominently be-

cause of the labor-intensive nature of this business, providing around-the-clock and year-round care. All of the *Trends* 100 health care providers but one, Columbia Alaska Regional Hospital in Anchorage, are nonprofits. In many of their respective communities, particularly in rural Alaska, they are the single largest employer. For example, Yukon Kuskokwim Health Corporation (Bethel), Bristol Bay Health Corporation (Dillingham), Providence Alaska Medical Center (Anchorage), Norton Sound Health Corporation (Kotzebue), Fairbanks Memorial Hospital (Fairbanks) and Valley Hospital (MatSu Borough) represent

either the largest or second largest employer in their communities.

1996

The other big player in services is hotels. Like hospitals, many hotels provide around-the-clock services and are very labor intensive, but unlike hospitals they are much more seasonal. One additional hotel moved into the *Trends* 100 this year, while some repeaters were among the biggest movers. Given the present small boom in hotel construction around the state, more hotels may join the list in the coming years.

Many of *Trends* 100 are *Fortune* 500 companies

Not surprisingly, some of the top employers in Alaska are large national firms. More than a quarter of the *Trends* 100 firms also show up annually on the *Fortune* 500 list. (See Table 8.) They vary from ARCO Alaska to Kmart and from Tyson to Pizza Hut.

Retail has the largest number of players

In 1996, the state's retailers employed nearly 29 percent of all *Trends* 100 workers, providing not only the single largest slice of the employment pie but a growing one as well. In 1990, retailers accounted for 24% of this employment. This growth should not surprise even a casual watcher of Alaska's economy, given the incredible growth and the recent arrival of national retailers in the state's market. Retail's effect on payroll is considerably smaller. Only 16.5% of the *Trends* 100 payroll comes from retail. Low wages and a preponderance of part-time employment reduce retailers' contribution to payroll.

Comparing the "Top Ten" Over the Past Decade

	Top 10 Employers		Top 10 Employers

9	VECO	9	VECO	
10	BP Exploration	10	Alyeska Pipeline Service Company	
				Table • 4

Although retail employment represents a big chunk of the *Trends* 100 employment, only 36% of all retail employment is represented by large employers. Smaller enterprises still dominate this industry. In 1996, more than 3,000 retailers not in the *Trends* 100 were operating in the state.

Lots of big players in manufacturing

Although manufacturing only employs 8.5% of the state's private wage and salary workforce, 16% of the *Trends* 100 workforce are employed by manufacturers. Seafood processing dominates this category, with 13 firms, one fewer than last year. Timber has the same number as last year, including the Ketchikan Pulp Company. Although this company closed its pulp mill in March 1997, its logging and sawmill operations may still place it on next year's list.

Air transportation remains dynamic

Although there is one fewer air transportation firm on the *Trends* 100 list (MarkAir Express), this industry remains one of the most dynamic groups of employers. All but two of these employers grew as most of them entered new markets,

increased their volume or did both. At least four of these airlines (Alaska Airlines, Peninsula Airways, United Parcel Service, and Federal Express) built or began building new facilities.

Trends 100 are well represented geographically

Although 66 of the Trends 100 employers have their headquarters or their largest work site in Anchorage, only 13 of these employers are exclusively in Anchorage. For example, Carr's headquarters is in Anchorage, but, with stores in 16 different communities, 41% of its employment is located outside of Anchorage. The Trends 100 employer with the greatest geographic spread is National Bank of Alaska, which has offices in 29 communities around the state.

"Top Ten" changes with public sector inclusion

If a list of the *Trends* 100 included the public sector, this list would end up looking vastly different. In fact, only the following four private sector employers would show up among the top 10 employers: Carr Gottstein Foods, Providence Alaska Health Center, Fred Meyer and ARCO Alaska. (See Table 9.) This is no surprise, since the public sector employs 28% of the state's wage and salary workforce and public sector employers as organizations also tend to be larger.

In a list that includes all public and private sector employers, the single largest player is the federal government, followed by state government and the University of Alaska. Local government entities also show up prominently on this list. For example, the fourth largest employer in the state is the Anchorage School District, and right behind it is the Municipality of Anchorage. In the future, private sector employers will play a more prominent role among the state's largest employers as the public sector's share of Alaska's workforce continues to get smaller.

Services Division,
Alaska Department
of Labor. Brigitta is
located in
Anchorage.

Labor force statistics reveal a positive labor market trend for Alaska in spite of a mixed industry performance with regard to employment numbers. Almost 1,500 fewer Alaskans were unemployed in May 1997 than in May one year ago. Alaska's unemployment rate dropped 1.3 percentage points in May to 7.0% (not seasonally adjusted)—a remarkable improvement over the 7.6% reading from a year ago. (See Table 4.) This is the lowest May unemployment rate since 1989—the year of the Exxon-Valdez oil spill, when clean-up efforts created numerous jobs.

The number of unemployed fell in 19 areas of the state and increased only slightly in eight over the past year. Kodiak, because of the fire-destroyed Tyson Seafood plant, had the largest increase of

Has Shrunk

unemployed workers. The jobless count fell most in the Kenai Peninsula Borough with 540 fewer unemployed. Construction and an early start of the visitor industry have helped to improve the Kenai Peninsula's unemployment picture.

During the first five months of this year, Alaska's wage and salary employment grew by only 0.6%. Monthly annual comparisons show the pace of job growth decelerating from 1.1% in January to 0.1% in May. However, this change does not come as a surprise. Some employment losses were expected to occur in May following the closure of the Ketchikan Pulp Mill. The fire at the Tyson seafood plant in Kodiak brought about an unexpected job loss. Both of these employers were among the *Trends* 100 employers in 1996, when the two companies employed a combined

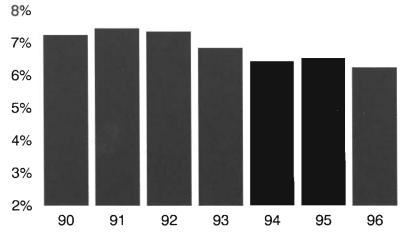

average of over 1,600 workers. These two events held back both seasonal and annual job growth in May, effects that will persist into the future.

Job growth in the manufacturing sector may not recover fully from the losses in seafood processing and timber-related manufacturing. Other negatives surfaced in oil-related employment, where job counts in May

Manufacturing's Share of Wage and Salary Employment

Source: Alaska Department of Labor, Research and Analysis Section.

Figure • 1

fell over eight percent below last year's level. This drop in oil industry employment should reverse later this year when new oil field development picks up. Although construction industries currently post over 300 fewer jobs than they did last year, gains in employment are expected to materialize as the season progresses. (See Table 1.) Adjusted construction schedules have shifted more job growth to later months. Once again services, retail and transportation industries, spurred by the visitor industry and air cargo traffic, have created sufficient jobs in May to mask the negative effects and turn employment growth slightly positive.

Some manufacturing industries face challenges

In 1990, the state's manufacturing industries employed 7.2% of the workforce. In 1996, their portion had slipped to 6.2%. (See Figure 1.) Since 1992, the number of jobs in manufacturing industries has fallen. Those connected to timber and seafood have been particularly hard hit.

Timber-related industries have suffered the biggest employment losses with a decline of about 40 percent between 1990 and 1996 and further losses in 1997. There is a possibility that Wrangell's saw mill will reopen, recapturing a few of the lost jobs.

Fish-processing employment increased with the rise of the groundfish fisheries in the late 1980s; but in the 1990s, its percentage share of total wage and salary employment declined with the expansive growth in the retail and services industries. Seafood processing employment lost ground in spite of the recent spectacular salmon harvests. This year, the large Tyson facility will be missed in Kodiak, although the company may revive some of its operation. But that is not all that ails in the fishing industry.

The progression of this year's summer salmon harvest bodes a repeat of last year's production and market problems. This year, the Copper River harvest produced a spectacular sockeye catch— more than double this region's average harvest. Harvest prices plummeted 36% below last year's level. These low prices reverberated in Kodiak and other regions. The Kodiak seine fleet forfeited over two weeks of fishing time, and most fishers in neighboring regions also remained on shore for the first opening, which idled the seafood processing crews.

Problems also surfaced on the Bristol Bay fishing grounds. Not only the low opening harvest prices but also a shockingly dismal catch in the Bay's waters amounted to a gloomy season. The Bristol Bay fleet landed a catch of only about 13 million fish, a paltry half of this year's harvest expectations. As a result of the weak catch in Bristol Bay, the fish processing companies probably will dismiss their crews earlier than in previous years. Although the industry's employment has not suffered big losses during the first five months of the year, the progression of this year's summer salmon fishery indicates that employment in seafood processing may fall below previous years' levels. Moreover, at this point it is not certain what will happen with this year's pink salmon harvest. The market outlook for pink salmon has not improved a lot. Fish processing companies, just like last year, may limit their purchases because they still are uncertain if they can sell the processed fish.

In timber and salmon economics, supply or demand problems cause difficulties. While timber industries are suffering a shortfall of supply, seafood industries are over-saturated with salmon. Also, the markets for pulp products and salmon have become more competitive.

A brighter employment picture is developing for petroleum-product-related manufacturing industries. Two refineries, the Tesoro plant in Nikiski

Unemployment Rates by Region & Census Area

r/ denotes revised estimates

Benchmark: March 1996

Comparisons
between different
time periods are not
as meaningful as
other time series
published by the
Alaska Department
of Labor.

The official definition of unemployment currently in place excludes anyone who has not made an active attempt to find work in the fourweek period up to and including the week that includes the 12th of each month. Due to the scarcity of employment opportunities in rural Alaskan locations, many individuals do not meet the official definition of unemployed because they have not conducted an active job search. These individuals are considered not in the labor force.

and the Mapco facility in North Pole, are expanding their operations. A sharp increase in the demand for jet fuel has maximized existing refining capacity. This demand, of course, stems from increasing air cargo traffic passing through Anchorage.

Construction employment to pick up later in the season

Some shifts in Alaska's construction schedule have impacted employment. Two large early summer projects, construction of the Kensington mine and the Whittier road project, have been delayed. The mine project was stalled by a year, and the road project, although recently back on again, experienced a delay of a few months. These delays, combined with the completion of other large projects, have caused employment numbers to decline compared to last year's performance. However, other sizable projects have been added to the list and are only a few months away from breaking ground. A \$125 million seafood center will be built in Anchorage. Alyeska Pipeline Service Company will build an office building in Fairbanks to house its transferred workers. The Mapco refinery in North Pole is planning for a \$60 million expansion. These projects and others will be large enough to offset the other delays. Residential construction in Fairbanks and Anchorage is brisk. So far this season, residential building permit values in Anchorage have exceeded last year's by 18%.

Summary

Although seasonal employment growth was on the slow side this May, there are signs that the economy will pick up speed as summer progresses. In spite of a slow start, construction employment will gain ground and turn in a good season. In May, employment in services, retail and transportation industries grew enough to offset some of the temporary job losses in oil-related industries and the lost seafood processing and timber industry jobs. Because salmon markets remain volatile this season, harvesters and fish processing companies will struggle over product prices. All told, although employment is growing at a slow rate, unemployment statistics have improved in most areas of the state.
