Alaska Economic Trends is a monthly publication dealing with a wide variety of economic-related issues in the state. Its purpose is to inform the public about those issues.

Alaska Economic Trends is funded by the Employment Security Division and is published by the Alaska Department of Labor and Workforce Development.

Printed and distributed by Assets, Inc., a vocational training and employment program, at a cost of \$1.14 per copy.

Material in this publication is public information, and, with appropriate credit, may be reproduced without permission.

Alaska's Health Care Boom

By Governor Sarah Palin

The health care industry is one of the largest and has been one of the fastest growing sectors of Alaska's economy. More than one in every 12 jobs in Alaska is in the health care industry. In the Sitka Borough almost one in every six jobs is in health care. With at least 29,000 jobs spread throughout the state, this industry is both ubiquitous and essential to Alaskans' economic and individual health.

Alaska employment in the health care industry increased 40 percent from 2000 to 2007, from 20,700 to 29,000. Health care in Alaska has been on a pathway of accelerated growth for at least three decades for several reasons. Technological advances continue to boost the demand for services. The number of medical procedures grows as more remedies are found for health problems. The aging of the population is also a significant factor impacting demand. Between 1996 and 2006, the number of Alaskans 65 and older grew about 50 percent, from 30,440 to 45,489, and this trend will only accelerate into the future. In addition, a greater proportion of Alaska's health care needs formerly taken care of in the Lower 48 are now met within the state.

The occupations in the industry have a wide variety of educational and skill requirements. More than 70 percent of the health-related jobs in 2014, including registered nurses and various technicians, will require at least an associate degree or significant postsecondary vocational training, and almost 30 percent of those, including occupations such as physical therapists, social workers and physicians, will require a bachelor's degree or higher.

While Alaska's health care industry job growth has slowed somewhat over the past two years, there is a need to train more Alaskans for health care careers. Significant numbers of job openings throughout the state reflect the demand for new workers, and retirements from the workforce play a major role in the future need for workers in the industry. The University of Alaska is taking a lead role in this effort and greater investments in education are necessary to deliver a prepared Alaska health care workforce.

My Fiscal Year 2009 budget proposal includes a \$2.5 million general fund investment to expand primary care, allied health, behavioral health and public health programs through various University of Alaska campuses. Allied health investments include increasing the number of associate degree clinical nursing and baccalaureate degree nursing slots in Anchorage, expanding distance education programs for registered nursing and allied health students, expanding the dental hygiene programs in Anchorage and Fairbanks, and expanding the paramedic programs in Fairbanks, Mat-Su, Kenai and Anchorage. Behavioral health increases will enable expansion of the baccalaureate and master's psychology programs in Fairbanks and Anchorage as well as investments to continue the Training Academy for Rural Behavioral Health. My budget proposal also continues the effort to establish a physician assistant program in Alaska, as well as double the size of the WWAMI program, a collaborative medical school program between the University of Alaska Anchorage and the University of Washington.

The investment the state can make in education sets the foundation for healthy lives and productive, rewarding careers.

It's one big dynamic industry

There are few industries in Alaska as large or that have grown as much as health care. It has a presence nearly everywhere in the state and includes a broad spectrum of occupations, ranging from surgeons to home health aides. The industry employs more people in Alaska than the federal government, state government, oil industry or most other industries. The industry had at least 29,000 jobs¹ in 2007 and its payroll was about \$1.2 billion. (See Exhibit 1.)

The University of Alaska Anchorage estimates that health care spending in the state tops \$5 billion – nearly one-sixth the value of everything

¹ See "What's Counted and What's Not" box on Page 6.

produced in Alaska's economy – and that health care spending could double again by 2013.²

Per capita health care spending in Alaska in 2005 was \$6,450 – about \$1,200 above the national average, according to the Kaiser Family Foundation.

It's a top performer

Nearly as impressive as the sheer size of the state's health care industry is the lightning speed at which it grows. The number of wage and salary jobs in the industry increased 40 percent between 2000 and 2007, from 20,700 jobs to 29,000. (See Exhibit 2.)

1 Health Care – One of Biggest Players Alaska's labor market, 2006

¹ Includes the private and public sectors
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

There's also the omnipresent nature to Alaska's health care employment. Slightly more than half the industry's employment is in Anchorage, but nearly every corner of the state has a health care work force (see Exhibits 3 and 4) and health care is often a community's largest or second-largest employer. Examples include the Yukon-Kuskokwim Health Corporation in Bethel, Norton Sound Health Corporation in Nome, Banner Health in Fairbanks and Mat-Su Regional Medical Center between Palmer and Wasilla. Thirteen of the 100 largest private-sector employers in the state are health care providers.

² According to the University of Alaska Anchorage's Institute of Social and Economic Research, or ISER (All references to the university in this article are specifically to ISER.)

The state's health care employment has grown more than three times as fast as all other industries since 2000 – health care's 40 percent versus 13 percent for all other industries. That rapid growth didn't just begin during the past decade – it's been the case for more than three decades. During Alaska's worst recession from 1986 to 1988, when the economy lost 20,000 jobs, health care employment growth stalled for only a year and then resumed its impressive upward trend.

And not only has health care employment grown considerably faster than the state's overall employment, it has also increased five times as fast as the state's population and more than twice as fast as the nation's health care sector. (See Exhibit 5.)

What makes health care different

One unique feature of health care is that it doesn't fit the classic supply and demand model that most industries follow. It's often viewed as something absolutely necessary. When people break their arm or have chest pains, they go to the doctor; it's not like choosing to buy an iPod or going out to dinner.

In a similar vein, the way health care services are paid for is very different from typical consumer goods. Third-party payers usually pay for health care services, and since the consumer rarely pays directly for the services, cost is often not a key consideration.

According to a University of Alaska Anchorage study, employers pay 39 percent of health care's

bills, government pays 42 percent and individuals pick up the remainder.

The delivery of health care is also different from most other services. A combination of private for-profit, private nonprofit and public providers deliver health care services, giving the industry its unique character. (See Exhibit 6.)

Reasons for health care's growth

There's no simple explanation for the faster-than-average growth or why Alaska's health care employment is growing so much faster than the nation's.

Supply and demand does help explain some of the spectacular employment increases. Tech-

Growth in Health Care Employment, 2000 to 2007

6 Most is in the Private Sector Alaska's health care employment,¹ 2006

What's Counted and What's Not

The industry numbers used throughout this article are conservative because they don't include the jobs held by uniformed personnel who provide health care to the military population or the jobs held by the many health care providers who own their practices and are considered self-employed. In addition, there are health care jobs in the federal, state and local governments that aren't counted here because they're part of departments or units whose primary activity is something other than health care. For example, a job as a school nurse would be counted as part of the school district under local government education and a job as an aide at one of the state-run Pioneer Homes would be counted under general state government.

The occupational data does capture all jobs in health care occupations, with the exception of those in the military. (See Exhibits 16, 17 and 18.)

nological changes are boosting the demand for health care services, and the number of medical procedures continues to grow as medicine advances.

Demographics has been and will continue to be a major contributor to the growth of Alaska's health care employment, particularly as Alaska's population continues to age. Although only 6.8 percent of Alaskans are older than 65 (compared to the nation's 12.4 percent), the state's 65-plus population grew by 50 percent between 1996 and 2006, and according to the most recent projections, it will double by 2020 and nearly triple by 2030. (See Exhibit 7.)

Because Alaska's senior population is growing faster than their national cohorts, Alaska's health care employment is also growing faster and may continue to do so in the future. The state's Medicaid program now spends 42 percent of its funds on children and 22 percent for seniors. Medicaid planners expect 45 percent of the program's budget to go toward seniors by 2025, with a near-tripling in the number of senior recipients, from the current 43,000 to 124,000. That's a growth in spending from the current \$975 million to \$4.7 billion in 2025.

Another explanation for Alaska's more rapid growth is tied to the phenomenon economists call "import substitution," which means an increasing share of Alaska's health care needs are met locally instead of people having to go out-of-state for treatment. As the state's health care industry grows, more health care choices exist and more health care money is spent in Alaska – all causing the industry to expand further.

One example of Alaska "catching up" with the rest of the nation: In 1990, health care represented 4 percent of Alaska's wage and salary employment versus 7 percent for the United States as a whole. By 2006, that difference had nearly disappeared. (See Exhibit 8.)

Another boost to growth in health care employment came with the dramatic expansion of Anchorage's Alaska Native Medical Center since the late 1990s. Two nonprofits own, manage and provide health care at the medical center, the Alaska Native Tribal Health Consortium and Southcentral Foundation. Their combined private work force grew from 1,056 in 2000 to 2,495 in 2006.³ The ANTHC and Southcentral are now the second- and fifth-largest health care providers in the state, respectively, and the state's 11th and the 16th largest overall private-sector employers. (See Exhibit 9.)

10 Health Care Costs Keep Growing Anchorage Consumer Price Index,¹ 1982 to 2007

¹ For selected components only
Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

Growth slows and limits to growth exist

During the past two years, gains in Alaska's health care employment have slowed. In fact, employment in 2007 budged little. That could be a sign that much of the "catching up" is over and future growth might begin to more closely resemble the nation's.

There are other things that might slow potential growth as well. One certainly is cost. Like elsewhere in the United States, health care costs continue to increase. (See Exhibit 10.) According to the University of

³ The numbers don't include ANTHC's or Southcentral's federal employees, which were 521 and 126, respectively, in 2006.

Alaska Anchorage, health care costs in Alaska run about 25 percent above the nation's.

Another potential limit for Alaska's health care employment is the availability of state and federal public funds. Since public funding plays such an important role in Alaska's health care industry, periods of budget restraint could curtail growth. The anticipated loss of federal dollars flowing into the state could already be in play.

Hospitals employ many

When it comes to the heavyweights in health care employment, hospitals do a lot of the heavy lifting. In 2006, hospitals were responsible for 40 percent of all health care employment in the state. (See Exhibit 11.)

Roughly 18 percent of Alaska's hospital jobs are in government – most are at local public hospitals or the Alaska Native Medical Center. About \$1.5 billion, or 52 percent of all health care receipts in Alaska, went to hospitals in 2002, according to the 2002 U.S. Economic Census.⁴

Hospitals are such big employers because they're labor-intensive and provide around-the-clock care; three shifts of workers cycle through the hospitals each day. For example, Providence Hospital has been Alaska's single-largest private-sector employer since 2001. Five of the 100 largest private-sector employers in the state in 2006 were hospitals. If public-sector hospitals were included, they too would often be one of the top employers in their communities.

Over the past decade, Alaska's hospital employment has

¹ Includes the first half of 2007 only

² Part of home health care services' growth in 2007 is because a large employer was reclassified; roughly 350 of the 1,724 is a result of that adjustment.

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

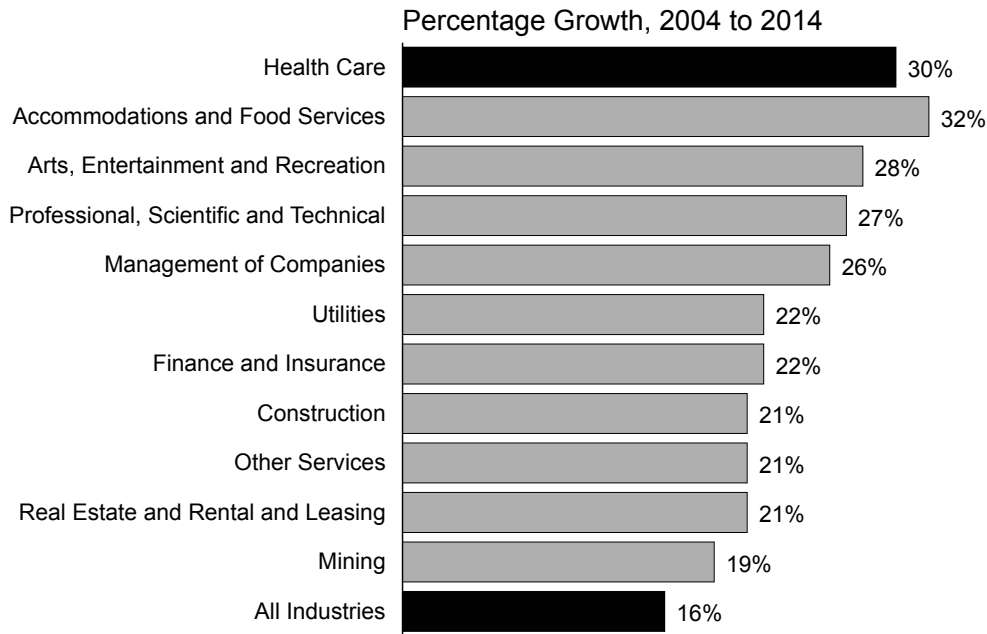

grown considerably faster than the rest of health care. However, the role of hospitals and other health care providers has become increasingly blurred. The traditional hospital model hardly exists today, when an increasing share of hospital activity includes outpatient care, and hospitals are branching out, opening day clinics and other health care facilities not often associated with hospitals of the past. The average earnings of people who work in hospitals also tend to be higher than they are for workers in most other health care services. (See Exhibit 12.)

A third of health care jobs are in the offices of doctors, dentists or other health care providers

Combined, roughly a third of all health care jobs in Alaska are in doctors', dentists' or other health care practitioners' offices. Employment in doctors' offices grew by 30 percent from 2000 to 2007. (See Exhibit 13.)

14 Alaska's Fastest-Growing Industries

A 10-year industry forecast, 2004 to 2014

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

The recent profusion of outpatient care might explain some of the growth. And like hospitals, doctors' offices sometimes look very different from the past. Some offices look more like hospitals minus the inpatient care. Dentist office employment has increased more moderately than the overall average.

Although employment in the "other health care practitioners" category represents only 6 percent of all health care employment, it has grown by a third in the last seven years. The reasons why aren't entirely clear. Employers included in the other health care practitioners category are the offices of chiropractors, optometrists, naturopaths, nonphysician mental health practitioners, and physical, occupational and speech therapists.

Big growth in home health, nursing and residential care

Both home health care, and nursing and residential care employment have grown faster than average. Both categories grew dramatically after 2000, but in more recent years their expansion has been more moderate. Part of the slow-down is due to changes in the way health care is delivered and changing demographics.

Nationally, nursing and residential care represents a much bigger piece of health care services employment compared to Alaska. Many of the residential facilities in Alaska are run by the state, such as the six Alaska Pioneer Homes, so, as mentioned earlier, that employment is captured in state government and not health care. Other facilities such as the Providence Extended Care Center in Anchorage and Denali Center in Fairbanks are connected to hospitals and are therefore counted under hospital employment; hospitals with adjoining residential facilities are quite common around the state.

Because Alaska's older population is growing rapidly, home health, and nursing and residential care will likely grow faster in the future and absorb a growing slice of the health care service pie – particularly home health care. Now, though, there's also some movement away from institutional care with a growing shift to in-home care.

All told, it's important to understand that it's becoming more difficult to categorize health care providers as easily as in the past. Traditional definitions often don't apply due to the blending of roles that many health care providers are playing today. Some hospitals provide nearly all varieties of care and some doctors' offices offer a wide variety of outpatient care. In addition, in many cases the different providers work in such close partnership that it's often difficult to distinguish between them.

Outlook for strong occupational growth

Given the current size of the health care industry and its outlook for growth, it will likely continue to be one of the dominant players for new occupational opportunities in Alaska's economy.

For all Alaska's employment sectors, employment is projected to increase by 16 percent between 2004 and 2014. Yet employment for health-care related occupations is projected to increase by 30 percent or nearly twice as fast as the rest of the work force during that time period (see Exhibit 14) and 15 percent of all new jobs created in the state's economy will come from health care. (See Exhibit 15.)

Another example of health care's dominance is its presence on the list of the fastest-growing occupations. Five of the 10 fastest-growing occupa-

tions are health care-related occupations. (See Exhibit 16.) The fastest-growing group includes home health aides, emergency medical technicians, paramedics, medical assistants and dental assistants.

In addition to growth, job openings come from the replacement of workers as they retire, change careers or leave the job market altogether. In the health care practitioner and technical category, an estimated 43 percent of future openings will be to replace workers.

Wages for Health Care Jobs **18**

Alaska, 2006

Retirement plays a big role in occupations that require extended training, such as with registered nurses and licensed practical nurses, where an estimated 40 percent in 2006 were age 50 or older compared to 24 percent for the overall work force.

Vacancies in health care are legendary. Ten percent of the state's health care jobs are now vacant, according to an Alaska Center for Rural Health⁵ survey released in August. Vacancies in several positions are more than 30 percent and some rural regions have overall vacancies as high as 20 percent, the survey said. Although filling those positions is a huge challenge for health care providers, they represent job opportunities for Alaskans around the state.

Earnings all over the map

In only a few other industries do wages vary as dramatically as in health care, an industry that has some of the lowest and highest wages in the work force. Similarly, health care jobs require a wide spectrum of education and training. In Alaska in 2005, for example, the average annual wage for healthcare practitioners and technical workers was \$66,847; for less skilled healthcare support occupations, wages averaged \$30,424.

Alaska's overall average annual earnings for health care in 2006 came in slightly above all industries. (See Exhibit 12.) That earnings figure, however, is conservative. Many doctors – the highest paid professionals – are often not included because, as mentioned earlier, many of them are self-employed. The lowest wages were for home health aides, one of the largest and fastest-growing occupations. Aside from doctors' wages, the highest wages were for pharmacists and physician assistants,⁶ both occupations that require extensive education. (See Exhibit 18.)

Selected Health Care Occupations	Average Hourly Wage	Median Hourly Wage ¹
Audiologists	\$41.60	\$43.40
Cardiovascular technologists and technicians	\$26.43	\$29.82
Dental assistants	\$18.12	\$17.66
Dental hygienists	\$39.15	\$40.74
Diagnostic medical sonographers	\$35.73	\$36.41
Dietitians and nutritionists	\$27.35	\$26.65

¹ The median wage for an occupation is the "middle" wage when all the wages of the workers in that occupation are arranged from smallest to largest. Half the workers in that occupation make less than the median, while the other half make more.

Source: Alaska Department of Labor and Workforce Development, Research and Analysis Section

⁵ The Alaska Center for Rural Health, created in 1987, is housed within the University of Alaska Anchorage's School of Nursing. It was federally designated in 2005 as Alaska's Area Health Education Center.

⁶ Dentists, typically high wage earners, aren't included here due to data limitations.

Hints of a slowdown in December

Alaska's seasonally adjusted unemployment rate rose one-tenth of a percentage point in December to 6.5 percent and payroll employment was up 1,900 jobs over the year. (See Exhibits 1-3).

An echo of national trends?

Nationally, a rise in the unemployment rate from 4.7 percent to 5.0 percent and seasonally adjusted payroll employment growth of just 18,000 rattled financial markets and elevated concerns of a recession in 2008. It's too soon to know whether the December numbers indicate a change in economic direction for the country or just statistical variability, but they certainly caused a stir and will heighten attention on future months' data.

Alaska's numbers show some similarities to the national data, although the movements are both more muted and less restricted to the most recent month's numbers. The state's unemployment rate has slowly climbed from the 2007 low of 5.8 percent in April to December's 6.5 percent. Over-the-year employment growth has also slowed in recent months and was just 0.6 percent in December.

It's still too soon to know whether the state's slower growth and higher unemployment rates will continue – or even to what extent they are due to statistical variability rather than real economic change – but as with the national data, the numbers warrant a little extra attention in the coming months.

Losses in construction

A closer look at payroll employment estimates shows additional parallels between Alaska's economy and the nation's. One high-profile example is the job losses in the construction industry.

Alaska's December estimate of 15,200 construction jobs was a decline of 900 from December 2006, or about 5.6 percent. Nationally, construction industry employment fell by about 900,000 from December 2006 to December 2007, a drop of 1.2 percent. In both cases, the losses have been occurring for more than a year and are not expected to rebound in the near future.

Gains in oil and gas

On the other side of the balance, oil and gas employment has been a bright spot for both Alaska and the U.S. for the last few years. The industry accounted for an estimated 700 of the state's new jobs since last December, nearly 40 percent of total growth. Nationally, nearly 33,000 new jobs were created in oil and gas extraction and thousands more in related support services from December 2006 to December 2007.

A Safety Minute

Fire Hazards

Fire hazards can increase during winter months. It's important to understand the hazards and eliminate them now.

Heating Equipment – Improperly installed, operated or maintained furnaces and other heating equipment can lead to a fire.

- Equipment should be installed and serviced annually by a licensed technician.
- Combustible material should never be kept in furnace rooms.
- Temporary heating units generally shouldn't be used in public buildings.

Electrical – Misused, damaged, improperly maintained or overloaded electrical equipment is a common cause of fire.

- Extension cords need to be in sound condition and should only be used for temporary power to equipment that's being used by someone now.
- Cords should never be left coiled up while plugged in. Inductive heating can cause insulation damage and the cord will become a fire hazard.
- Circuit breakers should be turned off and on every six months to ensure they are functioning properly.

Mechanical Friction – Equipment that's not properly maintained or cleaned can lead to fires.

- Bearings on ventilation equipment and conveyors should be kept properly aligned and lubricated.
- Loaders and forklifts should be kept cleaned and free of combustible material.

Proximity Hazards – Hazards outside buildings can expose the buildings to the risk of fire.

- Fuel tanks near buildings should be installed to current codes and protected from vehicle collisions by a barricade.
- Dumpsters should be at least 30 feet from buildings.
- Weeds, brush and grass should be kept mowed back at least 30 feet from buildings.

Remember the **Fire Defense Triad**:

1. **Detection and Notification** – Discovering the fire and alerting the fire department
2. **Emergency Egress** – Well-marked safe ways to leave the building
3. **Incipient Suppression** – Sprinkler systems, fire hoses and portable extinguishers

Employer Resources

Posters that Employers Are Required to Display

Alaska and federal law requires every employer in the state with employees to post employment-related posters so each employee can see them every day. All the posters are free and, with one exception, are available either by downloading them in a .pdf format on the Web site below or by contacting the Alaska Department of Labor and Workforce Development's Labor Standards and Safety Division in Anchorage at (907) 269-4900 or in Juneau at (907) 465-4855. The one exception, the Employer's Notice of Insurance poster, is available from each employer's Workers' Compensation carrier.

The law requires all employers to display 10 state and federal posters. Employers who require employees to take polygraph tests must also post the Employee Polygraph Protection Act poster, and there's an optional child labor poster.

To download the posters or for more information, go to the Labor Standards and Safety Division Web site and click on "Posters" on the right, or go to labor.alaska.gov/lss/posters.htm.

To get to the Labor Standards and Safety Web site, go to the State of Alaska Web site at alaska.gov, click on "Departments" in the gold ribbon at the top, then "Labor and Workforce Development," and then "Labor Standards and Safety."

The posters are also available by going to the Department of Labor Web site at labor.alaska.gov. Click on "Employers" in the gold ribbon at the top, then "Employment-Related Posters."

Division of Labor Standards and Safety

State of Alaska > DOLWD > Labor Standards & Safety

Grey Mitchell, Director

The Wage and Hour Administration enforces and administers Alaska labor laws to ensure that workers are justly compensated for their labors and safeguarded from unfair or unscrupulous practices. This includes enforcement of minimum wages and overtime regulations, child labor laws, "right to return" transportation, public contract laws, and responsibility for the administration and licensing of private employment agencies.

The Mechanical Inspection Section provides protection through inspection and certification of amusement rides, boiler and pressure vessels, and elevators. The section also inspects electrical and plumbing installations and issues certificates of fitness to persons performing electrical and plumbing work to ensure the competency of persons performing such work.

The Occupational Safety and Health Section aims to protect Alaska workers from industrial accidents and job-related illness through the enforcement of state and federal standards, and by training employers and employees to follow safe and healthful work practices. The section also administers certification programs for asbestos abatement, hazardous painting, and explosives handlers to assure this work is done safely.

The Alaska Safety Advisory Council promotes health and safety issues with a focus on workplaces in Alaska and organizes the annual Governor's Safety and Health Conference.
