

1990 Census – The Big Count

By Kathryn Lizik

1990 CENSUS

ALASKANS COUNT

Once every 10 years every man, woman, and child is counted in the nation's decennial census. It is one of the federal government's largest undertakings, short of mobilizing for war. The next census is scheduled for April 1, 1990. The U.S. Census Bureau will hire an "army" of 300,000 census-takers; check the location of the nation's 106 million housing units; and help gather vital information about 250 million people. The census results will be a snapshot of what the country looks like on census day, and they will be used to plan government policies for the next decade.

The mandate for the census is found in Article 1, Section 2 of the U.S. Constitution. Its primary purpose is to determine how many congressional representatives each state gets. The importance of the census has increased, however, for reasons beyond congressional representation. More than \$30 billion in federal funds is allocated to the states according to formulas based on census data. State governments use the figures to allocate their financial resources and redraw legislative districts. Governments of all types use census information extensively
