The Gender Gap in Earnings

Females earned 65 cents for every dollar males earned in 1997

omen in Alaska earn less than men, on average. In 1997 Alaska females had wage and salary earnings only 65 percent as much as Alaska males, earning \$19,070 versus average male earnings of \$29,339. (See Exhibit 1.) Females make up 47 percent of total workers. They earned less than males in every geographic area of the state, in every major industry, in every age group, and most occupations.

Why is there a discrepancy in earnings? Within the same occupation, annual earnings differentials between the sexes may be the result of differences in training and experience, likelihood of seeking full-time versus part-time work, and even discrimination. None of these factors can be quantified or measured at this time and are not examined in this report. What we do know is that the average number of calendar quarters worked for males and females is virtually identical—3.24 quarters for males, 3.25 quarters for females.

Some females may improve their earnings by training for or searching for jobs in higher paying occupations currently dominated by males. Of course, career decisions must be made while considering the overall job outlook, number of positions currently filled and an assessment of the job seeker's ability.

Alaska's gender gap unchanged from 1995

From 1990 to 1995, Alaska's gender gap narrowed from to 61.2% to 65.6%, a significant

improvement. This trend did not continue into 1997. The overall income and worker percentages for male and female workers remained relatively stable from 1995 to 1997 despite a strong economy, low unemployment and an increase in employment opportunities. Although the percentage of workers that were female increased slightly and females kept a slightly greater percentage of total earnings, average earnings for females declined in both absolute and relative terms from 1995 to 1997.

(continued from page 3)

Female workers earn more in some parts of Alaska

Average earnings for females ranged from \$11,211 to \$30,812 in 1997 depending upon the area of the state in which they worked. (See Exhibit 10.) Females, on average, earned the most if they worked in the North Slope Borough, including Prudhoe Bay, although they represented only 25 percent of the workers in that geographic area. This high wage is due primarily to oil related occupations at Prudhoe Bay.

Juneau and Anchorage also had relatively high average earnings for females in 1997. In Juneau, females comprised nearly 50 percent of the workers, earned on average \$22,160 per year and earned 77.2% as much as males, one of the highest female to male average earnings ratios in the state. The high percentage of employment opportunities for women in government jobs in Juneau contributes to the narrower earnings differential.

While Anchorage females made up 49 percent of the workers and earned \$21,226, the third highest earnings in the state, Mat-Su female workers made up 55.6% of workers and earned only \$16,499. Mat-Su has a larger number of retail and service jobs which pay considerably less than government and oil related jobs in the Anchorage area.

Female and male workers came closest to achieving income parity in Dillingham and Bethel, where both genders earned near the statewide average for female workers alone.

Female and male dominated occupations

Exhibits 2 and 3 show the 50 occupations with the largest numbers of male and female workers in Alaska in 1997. Male workers were most frequently reported to be working in manual occupations (seafood processing related jobs), or as carpenters, construction laborers and janitors/

Gender Income RatiosBy age group, 1997

cleaners. The largest groups of female workers were working in general office occupations, as sales clerks, secretaries and bookkeepers.

A cluster of occupations is truly male dominated. Ten of the 50 top male occupations were more than 95 percent male, while only two of the top female occupations were more than 95 percent female. Male dominated occupations include carpenter, electrician, operating engineer, mechanic, truck driver, airplane pilot/navigator, plumber/pipefitter, engineer, equipment operator, and welder. Occupations that were at least 95 percent female in 1997 include only hairdresser and dental assistant.

Female general managers and top executives earn less than half what their male counterparts earn. Other occupations in which the gender earnings ratio is below 50 percent include carpenters, light truck drivers, miscellaneous material moving equipment operators, and security brokers. (See Exhibits 2 and 11.)

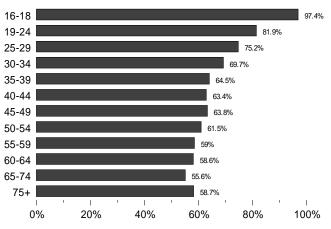

There are a few occupational groups where females earn the same or more than males, but they all pay well below the annual average wage for males of \$29,339. Most (secretaries, teacher aides, administrative support and clerical and bank tellers) are female dominated occupations. (See Exhibit 3.) In miscellaneous food and beverage preparation occupations, females earn 131 percent of male earnings, but are only 42 percent of workers, and their earnings are still low.

There are also a few small industry sectors, whose data are nondisclosable, where female earnings are comparable to those of males.

But these are the exceptions. Male nurses earn more than female nurses, and the same is true for cashiers, janitors, bartenders, bookkeepers, social workers, technicians, accountants, cooks, security guards, etc.

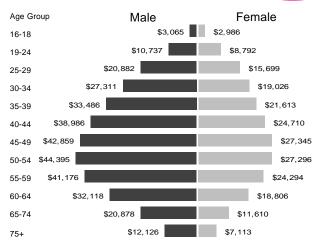

Those occupations in which female average earnings were 90 percent or more of male earnings include general office occupations, elementary school teachers, adult education and other non-secondary teachers, special education teachers, receptionists, reservation agents and ticket clerks, health aides except nursing, fast food workers, food preparation workers, billing clerks, plant and systems operators, and dental assistants.

 $^{^{\}star}$ Nondisclosable information. Some sectors with small numbers and nondisclosable data are not shown in the table, but are included in the totals.

Three occupations in which women earn higher than average salaries and experience smaller than average earnings gaps are elementary school teacher, public official and administrator, and supervisory mechanic and repairer.

Many industries are dominated by one gender

In many industries, the vast majority of workers are all one gender. The three highest paying industries in the state—oil and gas, mining, and construction, have only 11 to 13 percent females in their workforces. In health services and in the insurance industry, 80 to 81 percent of workers are female. (See Exhibits 4, 5 and 11.)

The mining and construction industries are disproportionately male, while finance, insurance and real estate, services and local government have a greater than average percentage of female workers. Health services, insurance and local education account for large numbers of female workers. (See Exhibit 4.)

Industries with the highest average female earnings included oil and gas, insurance, metal mining, electric utilities, securities dealers and communications. Local government, health services and state government employ the largest number of female workers.

Earnings by age group

In 1997, females earned less than males in every age category, with the discrepancy gradually widening until workers reach age 75. Average male earnings peaked at \$44,395 in the 50 to 54 year age group, while female earnings peaked in the 45 to 49 age category at \$27,345. There was no improvement in the earnings ratio of females from 1995 to 1997. (See Exhibits 7–9.)

Summary

The earnings gap between the genders in Alaska is large, with females earning 65 percent of what males earn, 59 percent in the private sector. The good economic times of recent years have not dented it. The gap persists across job categories, age groups and geographic areas, but is smallest in government service and education. The gap is wide for carpenters, light truck drivers and private industry management.

Methodology

All private sector, state and local government worker unemployment insurance wage records were aggregated to obtain total worker wage and salary earnings for 1997. Worker occupation, industry and place of work data were obtained from the employer from whom they earned the most money in 1997. A total of 351,411 wage records were matched with historical Permanent Fund Dividend applicant files from 1994 through 1997 and with current Alaska voter registration files to obtain gender and age information. More than 83 percent of wage records had gender information and 82 percent had both gender and age information.
