Preface

Every other year the Alaska Department of Labor (AKDOL) publishes the *Unemployment Insurance Actuarial Study & Financial Handbook*. The last Handbook was published in December 1995. The next will be published in September 1997.

During the two-year interval between publications of the Handbook, AKDOL staff receive numerous requests for updated Handbook information. To satisfy the requests, AKDOL publishes (in the alternating years) updated versions of the tables in Chapters 1, 2, and 3. This update is entitled UI Actuarial Handbook, 1995 Updated Tables. This is the sixth edition of the Updated Tables.

Readers of this publication may refer to the complete Handbook for definitions of technical terms used, a short discussion on the history of Alaska unemployment insurance legislation, and an explanation of the state's current unemployment insurance system. For more information, telephone Thom Wylie, UI Actuary, at (907) 465-4507; or James Wilson, Labor Economist, at (907) 465-4520. Or email

Unemployment, 1986-1995

Table 2.1

Year	Total Labor Force	Total Unemployment	Total Unemployment Rate (TUR)%	Covered Employment	Insured Unemployment	Insured Unemployment Rate (IUR) %	% Ratio IUR to TUR
1986	257,000	28,000	10.9	197,806	16,620	8.4	77.1
1987	249,000	27,000	10.8	187,025	13,301	7.1	65.6
1988	250,000	23,000	9.2	191,035	10,485	5.5	59.7
1989	253,000	17,000	6.7	203,423	9,056	4.5	66.3
1990	257,000	18,000	7.0	214,644	11,170	5.2	74.3
1991	258,000	22,000	8.5	218,367	13,237	6.1	71.1
1992	262,000	24,000	9.2	221,795	13,880	6.3	68.3
1993	299,000	23,000	7.7	226,475	12,213	5.4	70.1
1994	305,000	24,000	7.9	223,455	13,554	6.1	77.1
1995	302,269	22,114	7.3	237,816	12,885	5.4	74.1

Note: Insured unemployment and the insured unemployment rate are for comparison only, and are calculated as the percent of average covered employment filing claims for unemployment compensation during an average week of the year. The Total Unemployment Rate (TUR) uses labor force data, which include unemployment with employment. Labor force data were published using unrounded figures starting in 1995.

1/ The number of first payments relates to the calendar year indicated. The percent who exhaust their benefits relates to first payments in the 12-month period ending June 30 of the same year.

2/ Average weekly benefit amount for all claimants excluding certain part-time workers.

3/ Exhausts: Persons receiving payments for the maximum number of weeks available to them in a particular program.

Notes: A-rated firms are those which have been subject to the Employment Security Act for four or more quarters and therefore qualify for a rate determination based on their quarterly payroll experience. Employers are assigned a rate class based on their payroll decline experience as compared to all other ratable employers. Employers with a low quarterly payroll decline receive more favorable rates than those employers showing more excessive declines in quarterly payroll figures.

B-rated firms are those which have been subject to the Employment Security Act for fewer than four quarters immediately preceding the computation date and must pay the standard industry tax rate.

C-rated firms are those which fail to pay contributions or file reports on a timely basis and must pay contributions at the highest rate. Percentages may not add up to 100% due to rounding.

Appendix

Data Sources and Limitations

Limitations of Data

The data in this publication are derived from a number of different sources, each with its own limitations. Much of the data come from reports that are produced directly from computer files in the state's mainframe computer. While the reports come from the same source, data that appear similar are not necessarily comparable, because the programs that produce the reports are run at different times and using different selection criteria.

Consequently, some of the tables in this publication are not directly comparable. For instance, Table 2.13 reports payment data by local office, while Tables 2.9-2.12 report the same data by industry grouping. The totals are not the same, however, because Table 2.13 comes from the Quarterly Management Report, which scans the file each week, while Tables 2.9-2.12 come from the UC-217 report, which scans the file once each month. Supplemental payments for weeks previously paid, overpayments, and other adjustments made during the month will cause the totals to differ slightly. Similarly, Table 2.13 differs slightly from Table 2.14 for the same reasons, even though both report benefit payments by area.

Differences also will occur whenever two tables are derived from different sources. Each table includes the data source at the bottom of the page. The reader should be cautious about other limitations as well. Percentages occasionally do not sum to 100% due to rounding when using only one or two digits. The data are reported to the full dollar amount whenever possible throughout the publication, but the dollar amounts in some tables are rounded to the nearest \$1,000 because of space limitations. Finally, industry groupings include subcategories for manufacturing and mining; these must be subtracted when summing the columns.

CHAPTER 1: UI Covered Employment and Wages

Chapter 1 provides information on employment, payroll, and earnings. The major source of data is the Employment, Wages, and Contributions report (ES-202), a report submitted to the U.S. Department of Labor, Bureau of Labor Statistics.

The information used in ES-202 is derived from quarterly payroll and employment information submitted to the Alaska Department of Labor (AKDOL) by all employers in Alaska. The information is also derived from AKDOL estimates for delinquent employers.

The ES-202 includes all employers covered by Alaska's unemployment insurance system. It also includes all Alaska employers' average monthly employment, total payroll, and taxable payroll. Additionally, ES-202 includes taxable employers' contributions assessed by the state and paid into the UI Trust Fund.

There was a change in the legal definition of wages for UI tax reporting purposes, which went into effect July 1, 1995. Employers, however, had the option of waiting to implement the change at the start of the next calendar year. Under the new definition, certain retirement benefits are excluded from the computation of wages paid to employees. The impact of this change will be the lowering of wages reported by employers. This defini-

tional change should be kept in mind when comparing annual time series data (such as Tables 1.3, 1.4, or 1.5) after 1994. The full impact of the change should be seen starting in 1996. All data series which use ES-202 wages will be affected.

All data found in the chapters are broken out by industry, area, ownership, and tax status.

'Average monthly employment' is an estimate of employment based on actual employment data covering that pay period which includes the 12th of each month. It is an estimate of the number of jobs filled each month. Caution must be used when deriving annual earnings from these figures, as they represent average annual earnings per job, not per worker. Payroll is the actual total payroll during each quarter.

Throughout Chapter 1, industries are broken out according to categories established in the Standard Industrial Classification (SIC) Manual. Specific industries, based on 2-digit SIC codes, were selected because of their relevance to the Alaskan economy. The same categories are used for benefit payments in Chapters 2 and 3. Employment, payroll, and earnings information is also broken out by ownership -- private, state government, and local government. In all industry and ownership categories, federal government employment is excluded, as federal employees and members of the military are not covered under the state unemployment insurance program.

It is noteworthy that public administration (SIC codes 91-97) is not directly comparable with state and local government ownership. While all of public administration employment is included in either state or local government, the opposite is not true; some of the operations included under state or local government ownership are listed under other industries than public administration, particularly construction, transportation, and services.

CHAPTER 2: UI Benefit Payments

Chapter 2 provides information on benefit payments. Information on unemployment claims is entered into Alaska's Data Base 2 System (DB2) and is recorded in the state's computer. Three of the basic reports from this file form the basis of most benefit payment data used in this publication.

Payments by industry and area, Tables 2.9-2.12 and Tables 2.14-2.15, are derived from the UC-217 report. The UC-217 report is a monthly compilation of data by 2-digit SIC codes and 3-digit geographic area codes. Payment amounts differ from the amounts shown in Table 2.13 due to the omission of supplemental payments for weeks previously paid, penalties and interest, and other adjustments.

Two reports provide information for the payment data in Tables 2.5-2.8, 2.13, and 2.16. These data are derived from AKDOL's Quarterly Management Report, which scans weekly the department's active claimant file. Some of the data are also derived from the U.S. Department of Labor's Claims Activity Report (ETA 5-159), which is taken from the weekly and monthly management reports.

Data in Table 2.2 are derived from the 'Claimant Characteristics' program. This program provides a special compilation of information on all claimants who received unemployment compensation during a specified year. Occupations are listed according to classifications in the Dictionary of Occupational Titles (or DOT codes). Ethnic information is based on information voluntarily submitted at the time of initial filing.

Table 2.1 uses data from the Local Area Unemployment Statistics (LAUS), an AKDOL report produced for the U.S. Department of Labor. This report estimates the total number of employed and unemployed in the state each month.

Table 2.6 uses payment data from the yearly ETA 5-159 report on all states compiled by the U.S. Department of Labor, Division of Actuarial Services.

Table 2.17 is derived from the **UI Data Summary**, a quarterly publication of key UI information published by the U.S. Department of Labor, Division of Actuarial Services.

CHAPTER 3: Alaska's UI Benefit Financing System

Chapter 3 discusses financial transactions, Alaska's UI Trust Fund, and Alaska's benefit financing structure. One of the major subjects of the chapter is benefit costs. Therefore, it draws heavily from the Alaska Department of Labor's Benefit Payments by Industry and Area (UC 217) report and the ES-202 quarterly reports (the USDOL's Employment, Wages, and Contributions report). In fact, several of the tables directly reproduce data reported in Chapters 1 and 2.

The other major data source for Chapter 3 is the Financial Transactions Summary (ETA 2-112). This is a monthly accounting report produced by AKDOL. It is the most accurate source of information on financial transactions and cash flow. Its major limitation is that it does not break out data by industry or area. It is used to compute UI tax rates (Tables 3.4 and 3.6), benefit costs, and benefit cost rates (Tables 3.1, 3.2 and 3.6). It is also the source for UI Trust Fund balances (Tables 3.3, 3.6 and 3.10), deposits and disbursements for all programs (Table 3.3), as well as interstate wage combining, reimbursable employers (Table 3.8), and collections, benefits and trust fund balance as a percentage of wages (Tables 3.4, 3.10, and 3.11).

Table 3.3 also uses data from the USDOL Contributions Operations (ETA 581) report in order to estimate reimbursable contributions between 1981 and 1984.

Table 3.5 lists experience ratings by industry, which are reported on the Array of Taxable Wages Within Size of Payroll Codes—a yearly listing of employers, their payroll experience, and their quarterly decline quotients. This information is also produced by AKDOL.
